I consider prevention of future robberies, rapes, and murders worth the
risk. There's an excellent chance that if I go, so does the SOB.

If you just turn over your car to whoever asks for it, how do you
maintain any self-esteem at all?

I've been by that diner. It isn't "out in the sticks rural," that area. Right next to Fort Hood, which drives the area's economy. If you're looking for jeans-wearing, gun-toting farmers and ranchers, Luby's in Harker Heights is not a prime place to find 'em.

Hi, have for sale a Drake 2-B receiver in very good condition - this is an excellent sounding receiver. Price is $265 plus shipping from 99516. Thanks in advance.

Mike

7. Re: [BoatAnchors] Alan's Thoughts & Brian's Comments.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-01 00:00:00 UTC
From: bjk@ihug.co.NZ
Message-ID: <200001012009.JAA10582@smtp2.ihug.co.nz>
Source record: 73749

>Forgive me for continuing this thread, but I believe my comments may be of
interest.

I fully endorse Alan and Brian's comments.

I may be able to shed some light on the ZL situation:

To my knowledge: A small group of individuals in ZL convinced themselves
that removing the code requirements would be the salvation of amateur radio.
This view was not endorsed by the vote of delegates at the annual conference
of NZART (our ARRL equivalent). The no-code lobby then worked behind the
scenes within NZART to push for no-code licensing. The politicing included
direct lobbying of the politician responsible for telecommunications. This
particular individual was a semi-educated techno freak (the sort who
believes that educational problems will be solved once all school children
are online tyo one another...)who then progressed the move at governmental
level.

The no-code push from ZL has been progressed without the endorsement of the
bulk of the members of NZART and the whole matter has been a source of
distress to many of us. This situation is the more ironic since here in ZL
Dr Gary Bold has developed and put into practice a computer aided morse
teaching system which is arguably the most advanced in the world.

their
>>best efforts to give away licenses with almost no requirements.
>>
>>I expect that the dreamers at ARRL, Kenwood, W5YI etc., are very very
>>frustrated at their failure to get more people on the bandwagon with these
>>various offerings. Look at the prices of imported radios declining! Few
people
>>are buying VHF and UHF rigs! Many areas have dozens of almost-DEAD
>>repeaters! I had to sell my 2m rig here. There is almost no one on the air to
>>talk with any more. I mean that!
>>
>>I am ready to stand corrected on all of this. However, I will not get into
>>endless re-runs of the CODE vs. NO-CODE debate, because it is OVER! NO-
>>CODE has won!
>>I accept that! The New Zealanders are on the forefront of where we are going
>>in this regard. They have led a major assault on morse code over there for
>>some years, and the haters of CW in this country have been encouraged by
>>the various campaigns to destroy CW. I am not sure that they are 100%
>>wrong. Perhaps just 80-90% wrong!
>>
>>I am open to all suggestions, but no one can take away the wonderful
>>experiences I have had with WW2 surplus gear, listening to Ws on 20m SSB
>>in the evenings from G-land on an R-1155 set with a homebrew PS,
>>homebrewing my rigs, blowing up capacitors, TVI-ing the neighbourhood
>>with a homebrew 5W Hartley on 10m, DXing in the wee hours on 40m CW,
>>10m QRP, 160m Winter DX, listening to lectures at a ham club on HOW the
>>superheterodyne principle works (you won't get much more of THAT now!),
>>contests when they were fun, chirping, building a bamboo quad, getting pile-
>>ups of JAs on 15m SSB and CW, QSL manager-ing, building a pair of 4-
>>400A linear from scratch, Medium wave AM broadcasting with an 807 and a
>>K-Mart turntable, pirating a novice call as an immigrant when there was no
>>"reciprocal licensing" allowed here, dialling the phone with a CW key (yes!)
>>and restoring old Drakes, Johnsons and Hallicrafters rigs, running AM on 80,
>>10 and especially 40m (my favorite band), helping the BoyScouts learn about
>>amateur radio and providing comms at their larger Jamborees in TN., building
>>club projects with the guys, proudly watching my XYL work to get her novice,
>>then her general (and she was a damn good CW op too!)
>>
>>What a shame that just a few years ago QST was FILLED with pages of
>>photos of 5 to 11 year-olds who could get their novice license including 5
>>wpm code and almost ALL of them upgraded to General.
>>
>>Now I think many have suspected that a relaxation was in the cards for some
>>years as it has been tossed around, and the word on the street was "why
>>bother?" So I understand. This is a busier time. CW lacks the prestige and
>>mystique that it had in the shadow of WW2. After all, the maritime services

>>have dropped it, and whether we like it or not, this is a different time.
>>
>> I have mixed feelings as I watch CW, like an old friend, enter old age and
>>become slightly more ill every few years. I say - WHO will keep it alive?
>>Will ANY Of us teach it to younger hams? My kids never wanted to learn
>>about ham radio. It does not have enough of the INSTANT REWARD aspect.
>>It is not EASY like buying a toy. Or is it? Will it be enough to salvage
>>amateur radio if they DO make it more like buying a toy?
>>
>>What is the difference between the FRS (Family Radio Service on UHF) and
>>amateur radio?
>>
>>Well, you can find your kids at the mall with an FRS radio! You can talk a
>>little farther away on your amateur gear.
>>
>> I know there are still MANY very positive things about amateur radio.
>>There is not some single sinister force guiding the direction of things,
but I
>>tell you this, things are developing in some directions that are not so good.
>>
>>I welcome now the new amateur restructuring, and I wish they would give
>>permission for what is already a reality - people broadcasting on HF with
>>music, editorials, entertainment and other useful broadcasts. The First
>>AMendment has been captive to the N.A.B. for too long in my opinion.
>>here should be at least SOME freedom of the airwaves. Listen on and around
>>6955 kHz or 15050 kHz some time!!
>>
>>I think we HAVE had too much of the wrong kind of regulation fo the past 25
>>years, and it IS time to move on to something better. FCC Is not equipped to
>>handle the job. ARRL has proved that they are virtually useless (even though
>>I respect the efforts of many individuals in ARRL and have enjoyed
>>membership there in the past for many years.) It is time for a new look at
the
>>whole thing. Perhaps the new FCC rules don't go far enough! Maybe they
>>should just butt out altogether and admit that they have and ARRL have
>>totally FAILED in their mission with regards to the amateur radio service,
and
>>let the people do it!
>>
>>I am still glad that I have had SO many wonderful experiences, that the
>>destroyers of amateur radio cannot take away! (whoever you think that is)
>>
>>As far as "dumbing down" goes.... I am not highly educated, at least on
>>paper. Yet, I know that my education was far better than most who have
>>higher degrees than me today.

>If a robber gets the drop on you, there's nothing you can do.
>But if you use your brain...

Exactly. If he wants your property, and has the gun on you, it would be smart to give it to him. Most of the time that's all he wants, and will leave you with your life.

If you're a Texas Mensa though, principle outweighs brains...go for the gun!!

All the criminals have that ability right now and that fact will not
change. Wouldn't you like to have a trained person like me available
to defend you from those criminals when no policemen are available?

Taking unto itself the majesty of confusion, on or about Sat, 01 Jan
2000 20:50:22 GMT, the creature known as JJ <jj@no.net> spake thusly:

>> And they would have offered wter for the radiator from the jeep can they had
>> in the trunk?
>
>If that was what they had in mind, they would have offered anyway.

Why?

If you stopped to help someone and they flashed a gun, would
YOU offer any help?

From any sane perspective, once someone demonstrates that he
doesn't trust you and displays a firearm, there is simply no rational
reason to remain in his presence. Why should you risk misunderstanding
and potentially lethal results to help such a person?

It's clear that at least part of the fear was generated by the
fact that they were Mexicans--isn't that just a "bit" racist? Would he
have reacted in the same manner if, for example, it had been three
blond haired, blue eyed, young college types driving a late model
sedan? Or do Mexican license plates = danger to him?

Sorry, but if it was me who stopped, the moment the gun
appeared I would have left him there as well.

Nobody is a mind reader. I go with the odds. The odds are that you will get shot and possibly killed if you resist an armed robber who has the drop on you. Most robbers want your property, not your life. Shooting you just complicates things for them...

>an elderly couple 2 roads over from us recently
>made that assumption when a deviant teenager demanded their car - and
>then stabbed BOTH of them to death...

For every robbery where someone is injured of killed, there are hundreds of robberies where there is no injury or death. The odds for injury or death are dramatically increased if you resist...

Just last week (in Phoenix) a woman customer at a video store (for some unknown reason) decided to resist an armed robber. She was shot in the head and killed with a shotgun for her trouble. She left a husband and several kids. All the other employees and customers were unhurt...

>but will resist with ALL means at my disposal your
>efforts to make MY choice FOR me! PERIOD!

Gary. Stop and read this carefully.

I do not advocate unarming the public.

I own several guns of my own. This discussion is about whether it is wise to resist an armed robber aiming a gun on you for principle alone. Cecil would die rather than be robbed. I would prefer to live and seek vengeance another day...

Source record: 73783

The present restructuring not withstanding, the "dumbing down" of ham radio has been going on for a long time. At least since after WWII. Prior to that, the tests were much harder than they were in the 1950's. Then came multiple choice tests and published question pools. All this pales in comparision to the days when one was required to draw complete schematics of various radio equipment as part of the test.

The code requirement has long been a canard. The techincal requirments/knowledge required to obtain a licesnse has always suffered and not kept pae with current technology. But it has been ignored in favor of meaningless code versus no-code wars.

Don't fool yourself, the latest restructuring is just in another in a long line of "dumbing down."

That used to be true but more and more often the robbery victims are
killed anyway.

The trick is knowing when to stand up and when to shut up.

47. FS: Keyer that will key TUBE radios

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-01 00:00:00 UTC
From: Radiodan W7RF <RFpower@radiodan.com>
Message-ID: <gpcb4.681$jT3.18802@cmnws01.we.mediaone.net>
Source record: 73856

Why mention this here? Because not many of todays keyers will even work with
TUBE radios.
This one will.

NEW in box, CK200 Keyer features a Curtis 8044 ABM Keyer Chip with
adjustable weight and tone, volume and speed controls, and dot-dash
memories. The CK200 works with all tube and solid state rigs and is powered
by either a 9 V battery or an AC adaptor (not included).Iambic "A" or "B"
selectable (front panel).
List is $79.95 + ship
My price $55 shipped

See the specs at http://www.vectronics.com/keyers/ck200.html

In preparing for Y2K, we've totally ignored the threat to the "C" series Hammarlunds.
As you might recall, they were designated with a "C" suffix if they were equipped with an on-board clock (HQ-180A with a clock became a HQ-180AC....similar nomeclatures applied to the HQ-145A/AC, HQ-170 or 170C, and so on)
As midnight approaches I suggest unplugging your radios!
and then Have a Happy New Year

Why would you assume worse case? Since it is my silently-alarmed
home, it is very unlikely that a robber would get the drop on me.
Probability is 100:1 that I would have him in my sights before he
knew I was awake. And he would first be greeted by 140 lbs of dog.
Of course, if he's armed and I'm not, my dog is dead and, more than
likely, so am I. You people who want to arm criminals and disarm
law-abiding citizens make me sick.

Any burglar invading an occupied dwelling is not the best burglar to begin with. A burglar invading with a weapon is even less bright. Perhaps the quality of burglars has declined since they no longer have to qualify with a jimmy bar and pass an exam.

Seriously, Cecil, this is an issue that takes some analyis. Those advocating concealed carry, for example, scare hell out of me but at the same time, an objective reading of the numbers would suggest it works. I choose not to have a gun in my home but that is my choice -- no problem with you making the opposite one. We would certainly agree that putting a trigger lock on a flintlock is knee-jerk stupidity at its ad absurdum worst.

The only thing I would insist on is that when you haul it out a corpse be produced, yours or his who cares. None of the wave it around to 'scare' people BS.

Dick

Different mindset.

John Lennon was shot to death in New York.

George Harrison was stabbed in England.

In 1996, England had 30 handgun murders; the U.S. has 9,390.

If the citizenry is relatively unarmed, the criminals don't seem to
bother with the heavy hardware, so much.

Happy New Year, all,

Bob

You might try the Heath reflector- probably (but not certain) heath@qth.com

Congrats on the new ticket and VERY pleased to see you working CW- if you become proficient, you will be one of a small breed. A small breed that is very much in demand for Field Day! With a little effort, it becomes easy and all of a sudden you are copying in your head and it is a second language. Don't be afraid to ask the sending station to QRS (slow down) for you. It may be of a great help to just listen to some QSO's for a while to become familiar w/ abbreviations and style.
Again, welcome

Dale W4OP

I'm licensed to carry concealed in five states. Law abiding citizens
carrying concealed weapons have been responsible for thwarting many
crimes. Education and training are the solutions to the gun problem.

> I
> choose not to have a gun in my home but that is my choice -- no problem

That's a fair attitude. After all, this is a free country where gun
ownership for law-abiding citizens is protected by The Constitution.
It is, isn't it?

THE sadness is that the "Arrons" of our world would GLADLY sacrifice their wives (as well as YOURS AND MINE in the form of legislation that eliminates OUR abilities to resist as well!) and daughters - if that was the price to be paid to save their cowardly, worthless hides! They would also not only allow the removal of their worldy goods at the first threat of violence against them - but would frantically offer to carry their stuff to the perpetrator's waiting car while their family was being raped.

I don't worry NEARLY as much about maurauders and predators (I can take care of THEM!), it's the "Arrons" that are a FAR greater danger to me and those like me by their misinformed and cowardly efforts to make ME that same powerless victim THEY demand to be!

68. FS Complete 1969 Heath Station

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-01 00:00:00 UTC
From: Webcpa <webcpa@netscape.com>
Message-ID: <84ldmnbpc1@news3.kcnet.com>
Source record: 73877

Here it is, complete and ready to go with all cables, original manuals, etc:
Built by an engineer, in storage for a long time. They fire up and run, they
look beautiful.
SB-101 transceiver + hp23 power supply
SB-620 scan-adaptor
SB-610 monitor scope
SB-630 console w/ "digital" clock (really analog), swr & phone patch
SB-600 speaker
HD-10 keyer & paddles
HB-15 SWR meter

Complete matched set. $ 450

69. FS Drake "C" Series

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-01 00:00:00 UTC
From: Webcpa <webcpa@netscape.com>
Message-ID: <84ldr9bpf1@news3.kcnet.com>
Source record: 73878

Flawless condition, T4XC, (serial 20700), R4C (serial 19379), MS4, AC4,
original manuals and a funky GE mike that matches the set. $490.00

70. FS Hallicrafters SX 100

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-01 00:00:00 UTC
From: Webcpa <webcpa@netscape.com>

Dick, you have missed the most important point of all. When a weapon is available, and displayed to the view of the intended perpetrator, almost invariably he will hasten to remove himself from the situation he has created, at warp speed. THEY don't want to get themselves hurt, they want to hurt YOU. Your defense is your very best offense, certainly in their view. I'd much rather not ever have to shoot one of them, or anyone else. But for sure I would, given the necessary circumstances.

My son, travelling alone in the SW at night, stopped to check on indications of overheating in his vehicle and noted a slowmoving old pickup with a Mexican license plate cruise by, with three individuals inside. Shortly it returned and stopped, about 20 feet from son's vehicle, and the individuals got out. My son at that point removed his offduty weapon from his back pocket, and dramatically stuffed it down the front of his belt, in full view of the three, who thereupon immediatley reentered their vehicle and drove off. This time they did NOT return.
Nothing more than display was necessary. What do you suppose would have been the result if he had not been armed?

One must, however, be very judicious in displaying a weapon. "Displaying a dangerous or deadly weapon in a rude, threatening or angry manner" is a felony in my state.

And probably true in any state. In Texas, it is illegal to carry an unconcealed weapon unless one is in law enforcement. Concealed weapons with a permit are perfectly legal.

In Arizona, any sane non-felon adult can carry an unconcealed weapon. About a third of the male shoppers in the grocery store in Apache Junction, AZ are packing unconcealed sidearms.

The three people would have asked if he needed help and had a good flashlight
so they could check the radiator belt and all hoses?

And they would have offered wter for the radiator from the jeep can they had
in the trunk?

84. FS Neat Homebrew stuff

1. Antenna tuner from the ARRL handbook. Has a home-built cabinet, with a funky little meter and some nice construction. 200 watts, maybe. The parts alone are worth more than this: $ 40

2. Antenna relay box, with a heavy duty 110v DPDT relay, coax connectors, an on-air light, great for older BA's $ 20

3. A really wonderful AC power monitoring box, in a cabinet 12 w, 9 h, 6 d. Has three 6.5 inch meters that tell you AC volts (90-130), Amps (0-20) and Hertz (55-65). So you can tell not only the voltage, amperage but also the frequency of the AC. Hooks up to 220 or 110. Meters alone are worth the asking price: $ 75

Better clean that crystal ball you are using to predict my death. So
far, I am immortal.

You absolutely must remember the odds. If your odds of dying were
one a million, wouldn't you risk a fight? I suspect your odds of
dying in a car wreck are about that same figure. Some people are
willing to risk more than others. That's a personal choice. I
usually take the risk and I usually win.

Greetings,

I'm about to begin building my first HF amplifier. By the time it's complete I should have a license class that grants the ability to use the thing. (still waiting on a callsign from a test I took over 2 weeks ago)

I'm going to start with either 813s or 4-400s (I have several of each). I've seen amplifiers in both grid-driven and cathode-driven configurations. I realize that cathode driven amps are easier to build and tune but also realize that the drive requirements of a grid-driven amp are much less.

I'm interested in the opinions of those with much more experience in this area and extend my sincere gratitude for the thoughts and opinions to those who respond.

Hi gang,

I've added more of the above magazines to my estate auction on eBay. As always, all proceeds are returned to the estate. Thanks.

Dunno Ross, look at it carefully. The nomenclature plate on the
unit has an Army contract number "5012-PHILA-44" and the
stamps are definitely Signal Corps acceptance stamps on the
face of the unit around the tag. The name tag is a bit unusual
for most mil stuff of the era though. But it is for sure military
with that contract number and with those stamps. How it was
actually used and by whom, well that is another story.

I have seen and do own several example of off the shelf items such
as receivers, etc from the period that are "stock" civilian units, such
as my Hammarlund SP-210, that have no mil nameplate nor had they
but still have the Signal Corps acceptance stamps on them.

You used the words "done me in". That means *death* to most people...

>You absolutely must remember the odds. If your odds of dying were
>one a million, wouldn't you risk a fight?

Your odds are closer to 1:1. In an armed robbery where the perp has a gun to your head, you advocate dying rather than giving up the property because of your principles. Your reasoning? You said you're too old (at 61), live alone, and don't want to go to a nursing home. Those are suicide/death wish odds, and not for me...

Finding low powered exciters is somewhat of a problem.
Almost all transceivers are of the 100 watt range. For a
grid driven amplifier probably 5 watts or so is about right.
Grid driven amplifiers require rather substantion bias
supplies. I think the point to ponder for a while is why
no commercial manufacturer makes anything but the zero bias
grounded grid type, and this has been the case for about 30
years. I suggest some reading in Bill Orr's Radio Handbook.

Not true. I advocate getting the drop on one's armed criminal
opponent and/or disarming him. You remind me of the people who
had bumper stickers saying, "Better Red Than Dead", back during
the cold war.

Have drawn a sketch showing some details of front view to distinguish between the different receivers (it was drawn using photograph). It is available as 10kb gif file, the smaller text is not readable, but perhaps not too important. Fronts are physical equally sized, and almost identically looking, the difference is that LwEa misses AGC-switch and separate RF gain control.

Clearly she shouldn't have done that but sometimes people
do things instinctively without taking time to think about
all the posibilities. I've known state troopers to go out
the same way.

There are numerous cases of legally armed citizens coming to the aid of police officers under attack and saving their lives. The media mostly ignores these incidents since they don't conform with the current anti-gun political correctness.

In one case, an officer had been overpowered by a big thug who was choking him. Traffic was stopped, but most observers were just watching when one young man, though unarmed, decided to go to the oficer's aid. As he ran past a stopped vehicle, a lady handed a pistol out the window to him as he ran by. He grabbed it and used it to get the drop on the thug.

There's a lot more trained, armed women out there than you'd imagine. I don't fault them at all.

124. Free HP8551B and HP851B in Seattle area

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <386EC8C7.5069@pop.removethistomailme.net>
Source record: 73905

It works great, but could probably use some new p/s filter caps and a weekend's worth of calibration.

Its CRT, BWO, mixer, and attenuator are good as new.

It is in very clean cosmetic condition, with a full set of manuals.

It weighs over 100 pounds, and is about half solid-state and half vacuum tube-based.

It consumes an entirely-unreasonable amount of electricity and bench space.

It will not be shipped anywhere, under any circumstances. You have to come and get it.

Send email explaining what it is, what you plan to do with it, and when you can come by and pick it up in Kirkland, WA.

Winner to be announced on Friday Jan 7. (Due to volume of mail received when I've offered things like this before, only the winner will receive a reply.) 73 es good luck!

It's a moot point - I don't own that sort of knife. There
are all sorts of techniques for disarming a smaller person
if he is ignorant enough to get within reach. Each encounter
will require a judgement call based on perceived odds.

If he had done you in, you would have then gotten your death wish. You would die (on principle) before allowing yourself to be robbed. Trouble is, both (robbing and dying) can happen at the same time. Dying to protect your family is admirable. Dying for an S10 is stupid (even for a Mensa)...

Leroy,

Please look at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=226498795

The middle box that you see on that picture is the control box for the
718-T(x) Collins radio.

It is identical in function to the aircraft control box that you are
looking for, but it has a few advantages ofer the aircraft box: there is a
VSWR/power meter built in, and all the audio circuits are present for
interfacing with a microphone and louthspeaker.

The 618T-3 radio also was used in land-mobile configurations called the
"MRC-95", this is where these boxes were coming from . The box on the left
is used to control a UHF collins radio that also was part of the MRC-95
This radio was the ARC-51, also from Collins. Maybe you are familiar with it

Good luck

Loek a0927429@dlemail.itg.ti.com

Need the BC-1000 nomenclature plate and
the cover assembly with screws that goes over
the dial light/calibrate switch on a BC-1000.
Have traders or will purchase. Can anyone help?

Folks,

I think that the reference has to do with the fact that Ramsey has been pulling the tail of the Feds for a while by offering equipment kits that are designed to support Pirate Radio applications (even though the "Free Radio" community seems to disparage his efforts...). I believe that that even in his catalog literature there was reference made to the potential use of his broad-band 1-watt amplifier for augmenting FM-10, FM-25 or FM-100 (domestic version) transmitters - (I can't find the catalog around the house at the moment, so I can't quote page numbers). The forementioned J-pole antenna appears to be designed for (semi-covert?) beyond-Part 15 broadcast operations. The raid may therefore have resulted from an accumulation of small provocations.

For trade, military Loudspeaker - LS-3.
Original paint, tag and ink stamps.
Non original speaker cord wired thru head phone jack
and connected to speaker terminals.
Over all very good original condition, some light scratches
but not bad. It is missing a few of the screws that hold
the front cover on. Can send digital photo if interested.

Looking for matching speaker for my near mint NC-183D.
Will only consider National speaker in similar condition.
Also needs to be the large version of the speaker.

Anyone want to trade?

158. Desk Consoles for Collins?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-02 00:00:00 UTC
From: Lee Smith <ckvnfm@mb.sympatico.ca>
Message-ID: <PROb4.337$k6.9106@news1.mts.net>
Source record: 73939

Hello Folks:

I had Jay Miller's new book at the office a little before Christmas and showed a fellow a few of the pictures of the consoles used to house the S-Line and KWM-2 as per pages 102, 108, 112, and 113 of the book. These were apparently made by a company called "Nova K," and he asked if I'd like him build one for me!!!

Needless to say, I jumped at the chance.

What I envision is getting one large enough to house two S-Lines on the bottom row, and (2) KWM-2's and (2) 30L-1's on the top row. Each row will also contain the associated 312-B4 or B5's with each radio. The 30S-1 will sit off to the side as per the photos.

Questions are as follows:

1- Does anyone have such a thing as a plan already drawn up for one of these things?

2- How about some higher resolution pictures of such a beast? Can you supply them to be used in assisting with the drafting process?

3- I need to pass along the size of the cutouts in the front of the console to hold the radios. It appears by the photos that the cases have been removed and the front panel of the radio plus trim ring do the supporting of the weight. Is there a shelf the radios sit on inside the console? Any insight on the way they sit in there would be appreciated.

4- Failing any info on the above, can somebody give me the inside dimensions of the S-Line with the case removed so I can use them to develop the size of the cutout? Maybe you have one on the bench that you could measure for me. (for a change, all of my stuff is off the repair/overhaul bench and on the operating table!)

Thanks to all, and Happy New Year to all.

You know perfectly well that is not what I said. I NEVER said there was "no way out". "No way out" are your words, not mine, and I resent your attempt at mind fornication. There's a good chance I can disarm the average criminal. For a 6'3" 200 lb. physically and mentally trained armed individual, there is almost always the chance of a way out without losing one's life *or* property. If one doesn't take that risk, there is still a high probability of losing *both* one's property *and* life. If the criminal realizes that it is his life that is at high risk, he might just change his mind.

However, the *risk* of losing one's life certainly exists and my statement indicates that I am willing to take that risk. And yes, my principles are more important than my life just as they are for military heroes who gave their lives defending their country.

There's lots of evidence that women who fight their rapist have a much easier recovery task than women who simply submit to their rapist. The same is true for people who resist criminals Vs submitting. Risking my life is worth the rewards. After all, I risk my life every time I ride my Harley.

Let's take a solid example. If you had your pistol pointed at the head of a criminal who had his pistol pointed at your head, would you give up your pistol because he commanded you to? That scenario separates the men from the boys. IMO, you are less likely to die by NOT backing down.

You must have read that wrong. I don't plan to die *and* I don't plan to
give up my possessions. I am simply willing to take the risk that I can
disarm a criminal or, if worse comes to worse, kill him before he kills
me. There's a good chance I will die anyway if I give in to a criminal.

You seem like one of those, "Better Red Than Dead", people. Guess we
can't count on you to risk your life defending our country, eh?

W6RCecilA wrote

>>most of the Texans I know, including
>>myself, would rather die defending our property than be robbed.
>>It's the principle that matters.

>I NEVER said there was "no way out".

Never say never, it is an *absolute word* and hard to defend. Your original (above) statement is also *absolute*. If you had said you would *sometimes* rather die, or gave some other non-absolute statement, then you would have wiggle room. But your *absolute* statement says simply (in all cases) that you would rather die than be robbed for property for the reason of principle.

So I hit you with an example (robber with a gun to your head) that made your statement sound foolish (which it was). Your response was even more foolish. You were old (at 61), alone, and didn't want to die in a nursing home. Now you're trying to back track by changing the subject with other unrelated examples. It won't work unless you amend your original absolute statement, or let this subject die a peaceful death...

>I resent your attempt at mind fornication.

Ah, Mensas are so high tech in their personal insults...

>For a 6'3" 200 lb. physically and mentally trained armed individual,
>there is almost always the chance of a way out...

You mean you, right? Well gosh, weren't you just complaining about being *old*, and didn't you say that you had to have your IC-706 modified (to the CB band) by someone else because your *hands shook* and your *eyesight was bad*? That's hardly the road warrior picture you paint of yourself above...

Aaron - you've already clearly stated you are NOT by any means an opponent to private ownership of weapons - and *I* accept that statement from you as honest truth. The REST of this long debate, then, revolves around individual perceptions of courage/protection of personal possessions and family under threat of violence. Since such scenarios vary WIDELY in their individual circumstances, I submit it is virtually impossible to accurately predict HOW a specific incident would likely go down - and only suggest that those of morality and courage WOULD resist such acts to the BEST of their ability, depending on situation. This, rather than the mere cowardly surrendering of personal values, family and possessions. It DOESN'T mean we would commit virtual suicide when a gun is held to our head - or the head of another family member - only that we would aggressively watch for an opportunity to challenge or overcome such an attacker if it presented itself, and pursue it RATHER THAN meekly accept our situation as irreversible, and make NO effort to turn the situation around as SOME seemingly are willing to do.

Is that fair and reasonable?

Gary - KJ6Q

Ramsey was pushing it as far as legality and they new it. They knew
their items were being used illegally, ie., pirate radio, and they were
manufacturing kits targeted to that audience. I don't necessarialy
approve of the way the feds handled it, but Ramsey should have known
they weren't going to get away with it much longer.

181. New Year's Resolution

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-03 00:00:00 UTC
From: mlangen@earth.execpc.com
Message-ID: <387115ae$0$84817@news.execpc.com>
Source record: 73662

My resolution for Year 2000 is to assemble a basic (but nice) vintage station comprised of some of the rigs I admired as a young (and impoverished) ham. My initial notions run this way:

XMTRS: Ranger (I or II)/Valiant (I or II) -- second choices -- DX-100B/Apache/Viking II

RCVRS: HQ-145/160/170/180, NC-183D/300/303

I'd like 160M coverage, so some rigs (e.g. Hallicrafters) haven't been thoroughly considered.

I'd very much appreciate feedback from you via direct mail on the peculiarities, strengths and weaknesses of any of these BAs with which you have had first-hand experience. Strong recommendations of others I haven't named would also be appreciated.

My mailbox may get a little full on this query, and I probably will not be able to respond to everyone. So, my heartfelt thanks in advance, and

73,

Mark -- WA9ETW

Here is an example of what the "restructuring" has
already formed .... 73 de Jim W4ONO .-.-.

Subject: A BIG, BIG GLOAT!!!
Date: 03 Jan 2000 17:56:11 GMT
From: techplus@hotmail.com (Tech+)
Organization: none
Newsgroups: rec.radio.amateur.misc,rec.radio.amateur.policy

Quite a few of my Tech+ friends from two meters are planning on
upgrading to General ASAP. After that, we're going to move our 2M net
down onto HF so that we can talk to even more of the former Tech+ hams
who have upgraded. Not only that, it should be easy to quickly go to
Extra class now that only a written exam is needed and Advanced class
licences will no longer be issued.

I'm going to be laughing in the faces of the Extras at our next club
meeting too. After years of their "attitudes", it is going to be loads
of fun watching them squirm. The more they whine, the more I will enjoy
it. Listening to the whining on here has been quite satisfying too,
because the elitists are getting what has been long, long overdue, and
they can't stand it.

Thank you FCC!!!

Concerning the FCC's recent simplification of
ham licensing and reduction of code rate:

There are a number of CB-Plus guys going around
saying they're going to "gloat" at the old timers
at the ham clubs and "rub it in their face" when
they take their government handout "upgrade" to Extra.

I propose that we old fossils who actually
worked for our tickets offically adopt the
terms "WELFARE GENERAL" and "WELFARE EXTRA"
when refering to these snide people.
I don't mean the sincere folks who come after
and act like decent people- I mean specifically
the CB-Plus guys who want to act like
horse's asses. When they "rub it in,"
remind them they're "Welfare Extras."

Paul - on the 390s, a common problem is the band selector switch. This switch is tripped by a cam off the MEGACYCLES knob and has 6 positions: ..5-1, 1-2, 2-4, 4-8, 8-16, 16-30 MHz. If one entire block (say 2-3 and 3-4 MHz) is dead I'd highly suspect a dirty switch. Another possibility is one bad crystal in the xtal oscillator module (in the middle front of the 390A). This will cause, say, 9 MHz and 16 Mhz bands to go dead. There are little trimmers for each xtal, so there is one trimmer for 2 bands (IIRC some trimmers cover 3 bands). The trimmers should be marked - if there are two bands marked that correspond to your dead bands, try tweaking the trimmer a bit for max sig strength. Otherwise you have a bad xtal. Last, the radio could just need an entire alignment. Sounds daunting, but if you have a decent signal generator, don't mind a lot of knob cranking, and have some patience it's really pretty easy. And there's nothing like the satisfaction of seeing that '390 hear a .1 uV modulated signal after all that tweakin' and crankin'.

Good luck and 73 - John

n0za you ask a very interesting question! In this day of age of greater control of personal freedom may I posit one explanation for the changes to come. Presumeably, with restructuring (destructuring) it might ultimately make amateur radio so untenable for communications resulting from an overall lack of operating discipline that it might actually force an exodus to the INTERNET:

"It is pointed out by the organizers of the League that up to the advent of wireless telegraphy it was necessary to rely upon either a telephone or telegraph company of the Federal government, for transmitting intelligence from one part of the country to another. The coming of wireless telegraphy has made it possible for the private citizen to communicate across great distances without the aid of either the government or a corporation, so that the organization of the relay league actually marks the beginning of a new epoch in the interchange of information and the transmission of messages."

Quotation from July 1914, Popular Mechanics appearing in _200 Meters & Down_ by Clinton B. DeSoto, page 40, copyright 1936 (reprinted 1981) published by the ARRL.

It might make interesting conversation to speculate that anything to get communications into a mainstream digital network would make the task or monitoring and control of a population so much easier and efficient.

Translated so even Aaron can understand: Most of the Texans I know,
including myself, would rather risk death defending our property
than surrender to a robber who is likely to kill us anyway.

It's pretty sad that some people pop-off about
a post when they haven't actually *read* it....
Let me spell it out *again*-

I'm all for newbies.
I don't have a problem with people getting tickets
the new way. I even *support* some of these changes.
God knows we've got to have the new blood.

I DO have a problem with the "HA! I got mine
and I didn't have to do that CW crap, so go eat it!"
attitude I've heard expressed several times by
some nasty little buggers I call "CB-plus."
For those guys, I recommend the "Welfare Extra"
zinger be ready.

Now, if only the detractors will read -this- one
(fat chance...sigh!).

You can, or course, do as you wish. On the other hand, us "old fossils" can act with a bit of "class" and NOT act like those we disapprove of. If "they" are the future of amateur radio, let "us" show the world what amateur radio "was", and perhaps the folly of dumbing down will not be lost.

I have a piece of equipment here that has some paint splattered on the front panel. The original finish is smooth gray paint. Any ideas where to start removing the splatter without removing the original paint? If anyone can relay their experience doing this I'd greatly appreciate it.
Also, how does one remove the dried adhesive fron old duct tape?
Please reply direct if you can help me with these problems. Thanks for reading.

For Sale: Winged Collins KWM-2 (SN 1413), 516F-2

Electrically:

Works fine, other than 10 meters (no output).

Transceiver Cosmetics:

Here are all the "imperfections" I could find:

1. Meter sometimes sticks (about half scale)
2. Small (appx. 1/4 inch) nick near Mic Gain control
3. 1/4 inch long hairline crack in plastic fiduciary
4. Cabinet hinge bent slightly
5. Knob inlays show wear
6. Trim ring has some scuff marks; through paint in one small corner area
7. Minor scuff marks on cabinet

All in all, this KWM-2 is nice ... front panel appears perfect other than nick above.

Power Supply Cosmetics:

Not too pretty. Someone apparently shipped the power supply without first removing it from the cabinet.

Every side (including front) of the cabinet has "wavy bends".

A speaker has been added to the 516F-2.

An original Collins Manual (Round Emblem) is included.

$900 plus UPS plus shipping and packaging.
Rig is near Detroit.
Prefer Local Pickup.

I've seen the console in the catalog you describe. I remember a particular
console we had at a few of the Pershing missile sites in Germany when
I was in the service. They were'nt the same as the famous console seen
in Collins advertisements. These had a desk writing surface, and a cabinet
to one side. The cabinet was abt 25" wide, and 36" tall. The KWM-2 sat
in the bottom shelf, the 30L1 above the xcvr, and station monitor and
supply
side by side above the amplifier. There was a facia board with cutouts of
the equipments front profile that fit over the front of the cabinet. The
facia
was held in place by guide pins, with the equipment fronts projecting
through.
It was quite attractive when all the trim was in place, despite the
cigarette
burn marks from knuckleheads forgetting thier butts . That would have
beenlate 70's, early 80's.I also recall seeing a Federal Stock Number on
the furniture, so some contractor built it, and we had to count them
at inventory time.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

Arrrrrrghhh.

omigod. That beats anything I've had to endure.

Friend of mine showed me a mint WD-11 in the box that he'd picked up at
a yard sale. He thought it was bad because the getter flash was not
silvery - of course they have lime getters that are painted on. Now he
knows what he's got.

Look at it this way: We kept the stuff out of the landfills and
incinerators. How many SX-88s and such are gone because there was
nobody to take the stuff off the widderwoman's hands?

Tom, I must agree. The strongest line of evidence for me
is the fact that the US Army never used a nomenclature
system of this sort unless I am mistaken. Their original
scheme was SCR-xxx with BC-xxx for subunits. Somewhere
along the way the changed to the JAN (jount Army-Navy)
system which pretty well describes things. The older US
Navy designations were an entirely different matter. The
gear that was used for more-or-less clandestine use is
another matter, like the RR-6, etc. They seem to have been
made with lack of ability to trace them in mind. I'm
certainly no expert, just an old surplus hound; I did a
hitch in the navy in the 50's, and have seen a lot of it
"on the hoof". Very impressive demonstration on your web
site. 73, Ross

That is about the dumbest statement I have ever heard. You obviously
don't know very many Texans, as a Texan myself, most of the ones I know
have more brains than that. A lot of good your principles do you if your
dead. Your the type of idiot that sees an 18 wheeler about to run a red
light, but you pull out any way because you have the green light and
your have right-of-way. So the truck driver was wrong, you were right
and dead.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale: Swan1500Z 80 to 10 meter amp. Before the crash, it was putting out 700 watts on all bands using the tubes from another amp. Something opened up or shorted inside which caused the plate current meter to bend and stick in the full scale position. The PS is very heavy duty. This amp is the PERFECT candidate for a single 3cx800 conversion. Lots of room to add 160 too. Have copy of manual which states that the PS will provide up to 1 amp at 2000 volts. Cosmetics are an 8/10. Inside is super clean.

Sell as-is needing tubes and repair/replacement of the multifunction meter and whatever caused the flashover/crash. This amp is very repairable but I have more than enough projects to last me to Y3K.

$190 + UPS charges on 45 pounds from San Diego 92139.

I'm glad we finally got back on subject here! Plenty of good firearms/ freedoms discussion on the rec.guns group - I recommend it! However, there actually is a common thread here.

Remember the old communications act of 34? You could listen to anything on the air, as song as you didn't use to info to make money. Then comes money & power...the TELCO's (wireless, of course). They got the law changed. Now the Power & Money (aka White House) is just as afraid of your electronic freedoms as they are of you freedom to defend yourself.

Ever look at a beehive? You got all the workers, mindlessley going about their daily tasks. The "Needs of the Many..."
OF course, the queen is defended and has drones to service her.

See the parallel in Hillary? She wanted to be health care queen, now she wants to be queen of NY. Too bad she can't keep her chief drone in the hive...

The current batch of liberals want not just your Gun or Radio Rights...they want them all.

Donate money to conservatives...donate time to get them elected...write editorials to your paper. Write everyone that shows up on your ballot. It's time WE were the "squeaky wheel" that got the oil!

240. Re: Removing paint splatter?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-04 00:00:00 UTC
From: Phil Nelson <nospam.philnelson@antiqueradio.org>
Message-ID: <m2zc4.3443$V2.34084@sea-read.news.verio.net>
Source record: 73544

If the splatters are latex paint, you can remove them with a mild (I said *mild*) solvent such as "Goof Off 2" or even ordinary paint thinner. Goof Off 2 needs to soak a while before you gently rub off the paint specks using a soft cloth. The solvent should not hurt an original factory finish. Use care to avoid rubbing off any original lettering or markings, of course.

If the splatters are something tougher, such as oil-based enamel, those solvents might do nothing but make the specks really really clean :-) There are stronger solvents, such as lacquer thinner, but before trying any of them I would apply some to an unobtrusive spot on the inside or bottom of the case, to make sure it won't remove your factory finish along with the specks.

Phil

Great - - - just what we need - - - another meaningless item to flame each other about. How about we just call folks by their first name and refer to their license by whatever it says on the license.

Only if we licensed hams recognize a 5 wpm Extra as an Extra. I recognize amateurs by their accomplishments. A Codeless Tech is still a Codeless Tech. If one passes the 20 wpm element, they are an Amateur Extra. If they don't, they aren't.

Chin up, old man. The new grade of instant hams will still shy away from the CW portion of the bands. I suspect that they won't be able to copy at 5 wpm, if at all.

Robert

I have a different suggestion. Let's just call them "jerks." Not only is it descriptive, it avoids the possibility that someone might misunderstand and think you are referring to the sincere folks. Even better, it's economical: you can use the same term to refer to those among the OTs who DO disparage the decent people. All in all, a nice all-purpose term.

Come on guys lets just drop the subject . We can't change anything but maybe barking about it some of you guys feel better. Don't worry about the CBers they are CBers because they cannot pass the 5 wpm or they are just to lazy to pass it other wise they would have their ticket by now. Life is full of changes especially when it comes to our government. The government is full of changes and full of allot of other things is you know what I mean. Just get on with life and don't worry the other guys (CBers) they are not worth. If you are using the Key just keep on using it . Just my thoughts on this matter which is really about nothing.

255. W1AW and Code Proficiency Certs.

Newsgroup: rec.radio.amateur.boatanchors

Source record: 73606

For those who use their BA's for CW, consider that soon W1AW will probably cease the long-standing transmission of code practice, and also stop the code proficiency runs. When this happens, the Code Proficiency Certificates issued by the League will become valuable collectables, to be sold on eBay for huge amounts of money!

But serriously, if you have been meaning to do the Code Proficiency runs "someday," time is running out! Start now.

Source record: 73607

In article <84imdq$vq2$1@ostrich.cybercomm.net>, ham@cybercomm.net
says...
> Well there you said it... "with enough work" That is what weeded out the
> CBers in the past. The argument "Why should I have to learn an outdated
> mode of communication to get a ham ticket?" Can be answered simply. "How
> much do you want a ham ticket?"

The catch is that the exam has to be at least practical. Why require
more than 5wpm code when in all likelihood they won't even be using that
mode?

> I see the pro's and con's of the new restructuring, but one thing that is
> painfully clear is that this is the beginning of the end of Amateur Radio.
> Very, Very sad
> There now will be no frequency allocation where one can escape the braindead
> CB hillbilly mentality found on several spots of the bands. It will
> gradually spread out and infect the whole Amateur spectrum. I just hope it
> is a slow enough disease where I can still enjoy a few more years of quality
> hammin'
> Why do we let this "dumming down" continue?
> The news sure ruined my day!

I doubt seriously that this will turn out to be a "dumbing down" of ham
radio. In fact, I'm optimistic that it will be just the opposite.

Hello,

I recently added a PREFIX look-up form on the QSL page. If you need to know where a prefix is from, simply enter the call or prefix and see what country it is assigned to.

You are invited to http://hfradio.org, a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

73!

Source record: 73610

As a Tech "Minus" (No Code), I WILL take advantage of the new rule (I was working on my CW speed anyway). However, I don't favor it. Maybe the committee that builds the question pools will put some of the sense of accomplishment back into each grade by smarting-up the questions.

One can get a no-code today by passing two written exams that prove he can keep from nuke-ing himself from sitting under his antenna at 1.5Kw, but still doesn't know operating manners, nor even how his rig works in case it breaks!

I'm all for newcomers to the hobby. I'm one now, and was one 30 years ago (WN4REQ). However, I think we are taking the "Nintendo" generation too far...if it doesn't do the work itself (and have "cheat" codes on the WWWeb, we don't think we're up to date!

I remember a term...LID, meaning a lousy operator. When we get our new batch of LIDs next year, the best thing to do is ignore them. When they realize no one is talking back, and they get tired of making farting sounds on the repeater, and they find the FCC DOES perform enforcement on the ham bands...they will go back under their rocks they came from.

> zinger be ready.
>

I wholeheartedly agree also. I also got mine "the old fashioned way",
but the immature idiots prancing around cheering about having the FCC
hand them a license so that don't have to put a little effort into it is
ridiculous! Taking the written test these days is also a joke. Any moron
that can memorize the questions and answers out of the study guide can
get an Extra Class license, WITHOUT actually learning the theory, and I
have seen many, many people do just that.

>
> Now, if only the detractors will read -this- one

Those "snide" people are only retaliating against those of you (and you know who you are) that refuse to move into the 21st century and accept that code may not be the golden child anymore and that its worth is no longer needed with respect to license testing. And who have made it clear on any number of occasions that those that do not "do the code" are not "real" hams.

I'd say it's just a case of turnabout being fair play.

> I don't mean the sincere folks who come after
> and act like decent people- I mean specifically
> the CB-Plus guys who want to act like
> horse's asses.

And all the while when we've been rehashing this topic, the negative comments and purely subjective and emotional reasons that you dogmatically adhere to in defense of code toward those that promoted changes, didn't make *you* look like "horse's asses"?

> When they "rub it in,"
> remind them they're "Welfare Extras."

Careful, you might need one of those "Welfare Extras" to repair your rig someday. You wouldn't like it much if they left you a "surprise".....

Dave

David Stinson isn't commenting against the change, he is actually all for it. He is just against the spineless jellyfishes (anonymous people, bad e-mail addresses, etc.), that are prancing around like they "deserve" this change. I see the same thing at the bank around the beginning of the month when all the Government leeches come in with their handouts.

Please quote the message where I
"dogmatically adhere to...defense of code."
You will find me on the side of the code speed reduction, sir.
I'm *for* most of these changes, even though I love code.
I'm -against- nasty attitudes displayed by spoiled children.

> Careful, you might need one of those "Welfare Extras"
> to repair your rig someday....

HO HO HA HA HA HEE HEE!!! What a JOKE!
I was fixing 'trons when you were still
swabbing "Zit-Away" on your nose, fella.
I repair my own stuff, thank you.
Even surface mount, if it isn't a large chip pack.
Ain't got the right tools for that.

I wouldn't trust 99% of these "bad attitude" guys I'm talking about
to know which end of a soldering iron gets hot.
Most of the new guys (and too darn many of the old guys!),
be they "good attitude" or "bad attitude,"
have trouble even using a meter, much less fixing their handhelds.
That's just a fact.
Some of them will go on to learn the craft. Most won't.
So I think I'll keep my test equipment handy, thanks.

Try to get some ammunition in your gun
if you're going to "pop off."
D.S.

FOR SALE. FOR SALE. FOR SALE.
This is one big giant humongus Western Electric 451A Radio Transmitter.
It is housed
in its very own original Western Electric metal cabinet with see through

glass door. The glass door is even sand blasted in its full glory
"Western Electric" to discourage any imitations. The full metal cabinet

stands at a little over 6 feet tall and about 24" wide and deep. The
gross weight is estimated to be about 1800 lbs/818kg!!!!! This is not a

typo error. Humongusly heavy iron throughout.
The frequency is from 550 to 2275 KC. Power Output is 25o Watts. The
tube complements are 242C's on top and middle row. Tubes are made by
Machlett USA. One 242C is label Amperex. The bottom row are 4 x WE
350B's. This quad of WE 350B's are thoroughly used. The most bottom row

has 3 tube sockets and there is no mention of the proper tube number.
They are 4 pins tube sockets.
The lower half of the transmitter has more transformers which the
previous owners have disconnected. The trasnformers are there waiting
to be mounted.
I have attached pictures to this posting. Just click below to see
them. You get what you see in the pictures. I have no way to test this

rig. I'd be terrified to! It will be sold "AS IS". From the condition

it is in I doubt anything inside is burnt. This is all the info I have.

It has manuals and the original WE blue prints.
PRICE: $1888.00
Terms of Sale : Cash or Certified Funds
Transportation: YOU PICK UP in MD.
Thank you
Chong Ong
PS. I will accept trades for tubes, vintage audio amps and the like.

My GT-550 has taken up smoking. It's apparently hooked on smoking its RF choke that provide the 800V B+ to the finals. Both the schematic and the parts list only refer to it as RFC1; no value is given. Are B+supplying RF chokes in final amps so standardized that no value needs to be given?

Any replacements out there?

Jeff, I dont' know where you can find a plate choke, but you can get a manual via

http://www.hi-manuals.com/CatalogG.htm

WE1FAR is available. Might as well jump on the "Rent-A-Call" bandwagon
too!

Piero - N3FVG
Current Extra (20 wpm), ARRL & W5YI VE & VEC
(original call from the beginning despite upgrading through the classes)

I imagine much of this "discussion" went on when the last major change in licensing
came about. The older guys might remember when "Incentive Licensing" (or as I've read
it referred to as "DIS-Incentive Licensing") was initiated. There was talk of the
downfall of Amateur Radio then.

I got my Extra in 1978. Yes at 20 wpm send and receive (for me the easy part),
taken at a FCC field office. And yes it took me four tries at the written, waiting 30 days in between as required at that time. (How many of you in 3 and 4 lands remember the dreaded Mrs. Woodlawn at the Baltimore office? WHEWWW!) I was DAMN PROUD when I finally passed. And how was I greeted by some of the older hams? While most congratulated me there were many who said
"Anybody can pass a multiple guess test! I had to answer questions in essay form and draw schematics!".

The more things change the more they stay the same.
The "smart ass" upgraded hams will eventually burn themselves out. Or at the least few
others will want to associate with them.

I will say the following though.....
At that time, study guides told you general areas to study for.
Not "Here are the questions, and these are the answers. Memorize them and pass".
In my opinion, the more work and commitment is involved to get something, the more
it's worth having.

From a technical standpoint, some of the things I've run into are scary!

A General or above (guessing because he was talking about working 20m phone) who not only
admitted to not knowing what the schematic symbol for a capacitor, or an actual capacitor
looked like, but was PROUD of it.

An Advanced asking "How big is a 50 ohm resistor".

An Extra being very proud that he managed to put on a type N connector.

A General saying his 4-400 amplifier "put out" over 2 kW because his watt meter pinned

on the 2 kW scale. When asked what his plate input was, he replied "100 watts".

Two guys on 40m phone, each had a different revision of the same Kenmore rig. The rigs had
a switch that on one said "FR ATTENUATOR", and on the other "RF PREAMP". Rather than
settle the argument of which it really was by looking at a schematic, they consulted the
grandest oracle of electronic knowledge..... the sales brochure.

You'll note that none of these are No-Code Techs. Perhaps fewer of their guffaws come
to memory because my allowance for their inexperience. My point is that the current
sad state of Amateur Radio is not ONLY due to the influx of "uneducated" hams.
Those of us who were there before them are also to blame for not showing them a good example.
We really need to take some of these "goofballs" under our wing. Teach them what they
don't know. Just as the many I can think of who did the same with me. For those who
decide to remain a "goofball" try to convince them that some other hobby might be
more suiting. Like collecting moss.

For those who may feel compelled to attack me....
I've loved radio for over half of my life. Through Amateur Radio I've managed to spend
much of that life doing something in radio. Many years in the two-way radio and paging business, and now in broadcast engineering. I've enjoyed operating and learning about many things. RTTY, Packet Radio, satellites, DXing, ragchewing, antennas, and much more. I've enjoyed being a volunteer examiner since it's inception. When a ham calls to ask if I would
fix his radio, I always respond "No. But I'll help YOU fix it". That way they learn something.

Thanks for the soapbox.....

Bob Poff cited some cases that would be funny if
they weren't.... well, maybe they *are* funny ;-).

My favorite has to be one I heard some time ago
on 40 meter phone, between a General
and a "just passed the Advanced last week."

General: "How's that new tribander- Did you get it up?"
Advanced: "Yeah, but I've had to take it down twice.
There's a problem with it."
General: "What on earth is wrong with it?"
Advanced: "Well the book says it's supposed to be 50 ohms,
but I put my ohm meter on it, and
it don't show no ohms at all!"

Oh my....
I really can't talk, though. When I had my General (1974)
I *could* build a transmitter that worked, but
I probably couldn't have told you exactly why it worked.
Learned some since then ;-).

The problem (for me) with rigs like the Pegasus and Kachina (and all the black box receivers) is the dependence on the computer. Specifically, I don't want to be tied down to a KB and monitor. The aesthetics of the experience are all wrong. For me radio is (surprise) mostly an *audio* thing, and PC controlled rigs shift that emphasis to video, cluttering everything up. I think that one of the things that appeals to me about BAs is the low demand they make on my eyes. No blinking, multicolored displays, and I can operate my TR-4 or HQ-129X sheerly by touch and ear. I don't ever have to look at things. I can focus on the signal this way. Computer control per se is great, because of the things it allows us to do (memories, infinitely adjustable IF BW, data acquisition, et al.), but I won't be sold until they can minimize the visual footprint of such rigs. Come to think of it, the Icom IC-756 is a good example of what I mean, incorporating a small, info packed screen on a conventional front panel.

Source record: 73495

I have had a couple of Zenith Transoceanics with paint splatter. My approach has been to use an Exacto knife to pop the splatters off.

Use a sharp pointed knife. Stick it gently into the center of the splatter, but not too far, an pry it loose. Very often it will pop right off the surface. It is tedious, but cosmetically effective.

I suspect this works best with fabrics, where chemicals may not be a good idea.

Gordon

296. FS HEATH (Sold HW-16) (Sold HR-10B) (Sold HD-1410)

OK Fellows & Gals I Have Only The DX-60 B Left To Sell...
73's W5IDX

For Sale All Heath Items PLEASE RESPOND VIA MY E-MAIL

SOLD (1) HW-16 C/W Transceiver Complete And
Working
With Toggle Switch Added To The Front Cover On The RH Side For A Narrow
Filter Modification. All Tubes Tested Good. Asking 65.00 Plus Shipping No
Crystals.

SOLD (1) HD-1410 Keyer Works (Volumn Seems A
Little
Low) Asking 45.00 Plus Shipping.
The Ext Keyer Input Jack Has Been Converted From RCA To A 1/8 Inch Plug.
(More Modern)
This Is An Iambic Electronic Keyer With Built In Paddles Adjustable Speed
And Volumn An Excellant Compact Keyer Combo.

(1) DX-60 B Cover Has Been Repainted Blue All
Tubes Tested Good Rig Seems To Work Fine. Asking 65.00 Plus Shipping

SOLD (1) HR-10B Receiver Not Working So Good. All
Tubes Tested Fine The Unit Receives But Cannot Seem To Tune In SSB Stations.
Also Has The Jumper Plug For Jumping The Mute Pins. Asking 45.00 Plus
Shipping

I Recently Obtained These Items For The Sole Purpose Of Gaining A HG-10B VFO
The Items Are Left To Be Disposed Of. These Items Have Been Stored For A
Long Time I Cleaned Them Up Some What And Cleaned The Tubes Sockets And They
All Seem To Come To Life. The HW-16 Worked OK For Me I Logged A Few Stations
On 80 40 & 15 With It Using One Of My Old Crystals From Another Rig. The
DX-60 Loaded Up Fine For Me On 80 CW Where I Worked A Nearby Ham Receiving
With My Kenwood.
The HD-1410 Keyer Works But The Volumn Is Much Lower Than My Own HD-1410.
The HR-10B Fires Up And Receives The BFO Will Engage But Tuning In The SSB
Voices Is Near Impossible.
I Would Thing An Alignment And Some Cleaning Might Cure This Problem.

I Believe These Units To Be Complete Please Ask If You Have Any Questions I
Am Not A Real Knowledgable Person On Heath But Have Research These Best I
Could. All Items Sold As Is Plus Shipping From 77065
73's W5IDX
W5IDX@worldnet.att.net

Check with a larger aviation supplier or shop that does work on
cabin-class and higher aircraft. The rail material is still standard
ARINC and is available.

> Cecil? "Whoops"?

Sorry, I misunderstood the question. I certainly would not shoot if there was a chance of hitting someone besides the criminal. During training, that point is emphasized more than any other. How many innocent citizens do you know of that have been accidentally killed by concealed weapons permit holders during a gun fight with a criminal?

But let me ask you this. Let's say a punk was threatening to blow you away and I was behind him. Would you want me to shoot him in the back with a hollowpoint that doesn't exit the body or let him blow your brains out?

> Remember, we're on the street as you implied above, not in your home.

More than likely, it won't be on the street. It is much more likely to be someplace like a 7-11. A couple of years ago in Phoenix, a robber pulled a gun on the 7-11 employee. Two concealed weapon permit holders pulled their handguns and placed the robber under citizen's arrest without a shot being fired. That is what usually happens. Actual shootouts are extremely rare for concealed weapon permit holders.

Here's a typical encounter from "the Armed Citizen" column in "American Guardian". "Even though Hickory, N.C. convenience store clerk Fred Hayes risked his job to discreetly carry a .25-cal. handgun at work, the decision likely extended his life. A customer attacked the concealed carry permit holder with a knife one morning and demanded money. When the store's manager got into the scuffle, Hayes, who had been cut by his attacker, fired one shot, striking the villain's side and sending him fleeing. He followed up by recording the getaway car's license number and hitting an emergency signal, summoning police. A wounded man was later charged with the crime at a nearby hospital. ("Hickory Daily Record", Hickory, N.C. 10/1/99)

Probably made by National or JW Miller. Seems they will smoke if freq of
operation is close to resonance.
Probably can use an SWR anaylzer to find the freq's. Seem to remember that
the Galaxy III and V had a problem on the high end of 10.
The guy who runs Surplus Sales of Nebraska used to work for WRL/Galaxy and
might answer the question. I would expect that any designed for 80 to 10
meters would work if it will fit. Good luck...I just hate such
non-identification!

Prices are PLUS shipping from 96003.

All tubes are NOS (New Old Stock).

5 Realistic brand 6KD6. $75.00 for all five.

1 20LF6 GE brand I thnk. $20.00

2 6HF5 Westinghouse brand. $20.00 for the two.

2 30KD6 one RCA and one Sylvania. Boxes are trashed but tubes are new.
$20.00 for the pair.

Take care,
Stan (530)241-0843

307. FS: Collins WE 51S1 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-05 00:00:00 UTC
From: Bob <bmiller@calweb.com>
Message-ID: <3874252e_3@news.calweb.com>
Source record: 73507
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

Nice Collins 51S1, winged emblem, works quite well, PTO could use alingnment (end point off a couple kc), No dings, dents, or gouges or corrosion. Front panel is nice with a few wear throughs on the paint. Cabinet is fine, but I'd repaint it to get it up to Super Dispaly specs. Trim ring is metal and in average condition. Knob inserts are about average for the age of the unit and could be replace if desired (see ads in Electric Radio). Good sensitivity on all bands. Mechanical filters are in good shape (not lossy or skewed response). Has a spinner type tuning knob, but too early for the dial lock option. I've had this receiver for some time and just need the room since I picked up a RE unit with dial lock last year. With a copy of manual and prints. All in all a very solid rig and a nice addition to any S line station.

$1100 plus UPS on about 25 lbs from zip 95827. I will pay for double boxed versapack (foam fill) at UPS.

tnx for the read es 73

And in today's society, the hospital filed suit against the
deep-pocket "Stop 'n Rob" and the clerk for recovery of the
medical bills incurred by the indigent robber, who then filed
suit against the "Stop 'n Rob" and the clerk for the pain and
suffering and loss of income caused by the gunshot. ("Real Life")

Welcome to Modern America.

From: "David B. Rogers" <dr7zyq@nidlink.com>
Message-ID: <38743765.5143@nidlink.com>
Source record: 73509

Kenwood TS-820(S) HF transceiver

This is listed as a TS-820(S) because it is a TS-820 which has had the digital readout added. My understanding is that that was the only difference between the two.

160 through 10 ham bands (non-warc)

Includes:
Digital readout
Both a.c. and d.c. power supplies builtin
Optional CW filter included
Both user and service manuals (original, not copies)

An easy 9 on 1 to 10. Excellent cosmetic and electronic condition.

This fine rig has a full set of features: RIT, i.f. shift, speech processor, i.f. outputs for use with monitor scope and transvertors, tunes WWV at 15mHz, etc. Has great receive audio!

$250.00 plus shipping.

David, WA7ZYQ

Hi Cortland,

I have the manual, but in the parts list, no value is given for
RFC1 -- the entry only says "plate choke." (I suppose I could
measure it's diameter, length and number of turns and grind up
those numbers!)

For Sale All Heath Items PLEASE RESPOND VIA MY E-MAIL

(1) HW-16 C/W Transceiver Complete And Working
With Toggle Switch Added To The Front Cover On The RH Side For A Narrow Filter Modification. All Tubes Tested Good. Asking 65.00 Plus Shipping No Crystals.

(1) HD-1410 Keyer Works (Volumn Seems A Little Low) Asking 45.00 Plus Shipping.
The Ext Keyer Input Jack Has Been Converted From RCA To A 1/8 Inch Plug. (More Modern)
This Is An Iambic Electronic Keyer With Built In Paddles Adjustable Speed And Volumn An Excellant Compact Keyer Combo.

(1) DX-60 B Cover Has Been Repainted Blue All Tubes Tested Good Rig Seems To Work Fine. Asking 65.00 Plus Shipping

(1) HR-10B Receiver Not Working So Good. All Tubes Tested Fine The Unit Receives But Cannot Seem To Tune In SSB Stations. Also Has The Jumper Plug For Jumping The Mute Pins. Asking 45.00 Plus Shipping

I Recently Obtained These Items For The Sole Purpose Of Gaining A HG-10B VFO The Items Are Left To Be Disposed Of. These Items Have Been Stored For A Long Time I Cleaned Them Up Some What And Cleaned The Tubes Sockets And They All Seem To Come To Life. The HW-16 Worked OK For Me I Logged A Few Stations On 80 40 & 15 With It Using One Of My Old Crystals From Another Rig. The DX-60 Loaded Up Fine For Me On 80 CW Where I Worked A Nearby Ham Receiving With My Kenwood.
The HD-1410 Keyer Works But The Volumn Is Much Lower Than My Own HD-1410.
The HR-10B Fires Up And Receives The BFO Will Engage But Tuning In The SSB Voices Is Near Impossible.
I Would Thing An Alignment And Some Cleaning Might Cure This Problem.

I Believe These Units To Be Complete Please Ask If You Have Any Questions I Am Not A Real Knowledgable Person On Heath But Have Research These Best I Could. All Items Sold As Is Plus Shipping From 77065

Alcohol is very effective in removing latex paint, but check it on the basic finish first. Often there is crud between the paint speck and the panel, and flowing a 'solvent' such as alcohol or a mineral spirit in between will allow the speck to be lifted off the panel paint. Some of the materials such as 'goof off' and the hand cleaners can be very effective, but ALWAYS test first.
WD-40 is just kerosene with added heavy oils and moisture displacers (alcohol?) and is an effective cleaner, as long as it is removed afterwards.

Sagging Shelf Sale:

Alinco EDX-1T manual tuner . Matches the DX-70 series HF + 6M
compact transceiver. As new in box. Has been used less than 1
month, never mobile. A 9.5+ only becuse it isn't NIB $ 195.00 + ship

==========

Kenwood PS-30 Power supply. Looks new. No box or paperwork.
with original Kenwood power harness $ 100.00 + ship

==========

Dentron Jr Monitor compact antenna tuner. Good for at least up to
200 watts. No documentation. Very good cosmetic condition for
age, a 9 at least . $ 60.00 + ship

==========

Gonsets:

GC-105 2m Communicator II AM Transceiver - works - No mic $ 50.00 + ship
Communicator III AM 2m Transceiver works - no mic - $50.00 + ship
Have 2nd Communicator III also same condition same price
(All 3 Gonsets work, but have not been airchecked)

==========

Lafayettes:

HA-35 6m AM Transceiver - Works - meter modification obvious addition
works, but has not been airchecked $ 40.00 + ship

HA-45 6m AM transceiver - works but has not been airchecked $ 50.00 + ship

==========

Realistic RP30/50 Tube 30 - 50 MHz Communications Receiver - AM/FM
Slide rule tuning and socket on front for fixed freq operation. In very
nice
condition. A rare addition for the collector. $ 50.00 + ship

==========

Also have transistor multi-band am only radios.
Inexpensive portables that will receive public service, airband, vhf,
some shortwave.... If interested, details can be sent via email

==========

Shipping will cost calculated from Postal Zone 31523. Shipping wil be
actual
costs of the boxed unit. All tube units will be shipped with tubes pulled,
labeled
and wrapped in foam or other "insulating" material. Every attempt possible
will be made to make the packaging "UPS Proof" and ready for rugby.
Insurance over the standard $100.00 can be added at request of buyer for
actual costs; $.35 for each additional $ 100.00 coverage.

326. MINIATURE TUBES for TRANSMIT and RECIEVE FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-05 00:00:00 UTC
From: tubecntral@aol.com
Message-ID: <20000105075106.01696.00000599@ng-ch1.aol.com>
Source record: 73561

Greetings to all in the year 2000!

Whoever thought we'd still use tubes ! ;)

I am now in the process of sorting another 10,000 NOS miniature tubes for your vintage transmitters and recievers. I have others, like the 6146's and other output tubes, but they are buried in the collection right now.

LOTS OF RUGGED *JAN* military types here.

So for now, i'll concentrate on miniature tubes, and some rectifiers like 5U4's and the like.

Please check your mini-tubes in your equipment, let me know what specifics you need, and i'll get right back to you.

I don't advertise too much, I vend usually by referals..

My pricing is very reasonable, way lower than AES and the other big houses.

NO MINIMUM ORDER, shipping 3.00 or less in U.S.A.

Thanks to all in the Amateur radio community for letting me provide this service
for the past two years. I don't advertise too much, I vend usually by referals..

Please respond privately with wants.

Regards,
Joe Pratt, Tubecntral@aol.com

327. Parting out Heath SB-102

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-05 00:00:00 UTC

Hello all,

I am parting out a Heath SB-102 transceiver. It's all there EXCEPT for the SSB filter, VFO knob, tubes, drive belts, and cabinet feet. The meter, knobs, crystals, CW FILTER, PA tank components, coils, boards, calibrator crystal, etc, are all available. The cabinet is undamaged, but the paint has lots of chipping (would be nice with a repaint). The front panel is generally nice, with some chipping along the top edge (up where the cabinet closes onto it) and would be a good one to replace another that's hacked up or has damage. The LMO dial has cracks at "15" and "65", but is still in better shape than most used dials. So... what do you need?

73,
Dean / K5DH

Those SSB guys that you were refering to DID "earn" their ticket, and
their behavior is nothing to write home about. So that more or less
blows your theory.

Hi! I have a nice working Tek 549 Dual Trace Staorage oscilloscope for sale for $100.00 PICKED UP in Ogden, UT. This deal includes a Type 204 w/option 1 scope cart & a manual in very good condition. The scope is missing the little lever knobs and the fan grate on the rear. Otherwise it appears to work great. Selling as/is where/is.

Thanx, Steve Please email

I was using the term *you* in the general sense, as in "youse guys".

> I'm -against- nasty attitudes displayed by spoiled children.

So am I, and some of the attitudes displayed by the "do code or die!"
crowd were nothing short of spoiled children. Now to hear them talking
about refusing to VE, and encouraging clubs to shum newly upgrade
generals and extras, smacks of nothing more than sour grapes. The
gloating by those of us who believed in the restructuring, is a result
of being subjected to the constant condescending and bantering by these
guys. A reaction if you will. I don't blame them.

Good for you. YOU are the exception.

>
> I wouldn't trust 99% of these "bad attitude" guys I'm talking about
> to know which end of a soldering iron gets hot.

How do you know ANYTHING about any of "these guys"? They may be quite
technically adept. The fact that they all have no use for CW, and are

glad that the requirement has been lowered, bears no correlation to
their technical ability.

> Most of the new guys (and too darn many of the old guys!),
> be they "good attitude" or "bad attitude,"
> have trouble even using a meter, much less fixing their handhelds.
> That's just a fact.

Yes it is. Which is why I shake my head in amazement when someone who
can't solder a mike plug (And I'm not refering to you), get's all upset
and has the nerve to call this restructuring "dumbing down", and who the
"real" hams are, when all they DID was learn 20 WPM, with little or no
REAL theory knowlege of their own. Tell me again who the "real" hams
are?

Dave

332. Racal RA-17 front panel repainting

A friend of ours has obtained a quote to make a silkscreen to use in repainting the front panel of the Racal RA-17, and is looking for others who might be interested in having their panel painted and share in the cost of the screen. Tim does _extremely_ nice work, and is among the most perfectionist of restorers I know; I have an R-388 he restored and it is nearly impossible to tell from new.

If you have an RA-17 that is looking shabby, please respond by email and we'll assess interest and determine a final price.

For Sale All Heath Items PLEASE RESPOND VIA MY E-MAIL

(1) HW-16 C/W Transceiver Complete And Working
With Toggle Switch Added To The Front Cover On The RH Side For A Narrow Filter Modification. All Tubes Tested Good. Asking 65.00 Plus Shipping No Crystals.

(1) HD-1410 Keyer Works (Volumn Seems A Little
Low) Asking 45.00 Plus Shipping.
The Ext Keyer Input Jack Has Been Converted From RCA To A 1/8 Inch Plug.
(More Modern)
This Is An Iambic Electronic Keyer With Built In Paddles Adjustable Speed And Volumn An Excellant Compact Keyer Combo.

(1) DX-60 B Cover Has Been Repainted Blue All
Tubes Tested Good Rig Seems To Work Fine. Asking 65.00 Plus Shipping

SOLD (1) HR-10B Receiver Not Working So Good. All
Tubes Tested Fine The Unit Receives But Cannot Seem To Tune In SSB Stations. Also Has The Jumper Plug For Jumping The Mute Pins. Asking 45.00 Plus Shipping

I Recently Obtained These Items For The Sole Purpose Of Gaining A HG-10B VFO The Items Are Left To Be Disposed Of. These Items Have Been Stored For A Long Time I Cleaned Them Up Some What And Cleaned The Tubes Sockets And They All Seem To Come To Life. The HW-16 Worked OK For Me I Logged A Few Stations On 80 40 & 15 With It Using One Of My Old Crystals From Another Rig. The DX-60 Loaded Up Fine For Me On 80 CW Where I Worked A Nearby Ham Receiving With My Kenwood.
The HD-1410 Keyer Works But The Volumn Is Much Lower Than My Own HD-1410.
The HR-10B Fires Up And Receives The BFO Will Engage But Tuning In The SSB Voices Is Near Impossible.
I Would Thing An Alignment And Some Cleaning Might Cure This Problem.

I Believe These Units To Be Complete Please Ask If You Have Any Questions I Am Not A Real Knowledgable Person On Heath But Have Research These Best I Could. All Items Sold As Is Plus Shipping From 77065

Hi folks,

I usually don't comment on things. I just read and go on. But as a VE and moreso as someone who got started when the FCC was still issuing their tests, here is something of a personal opinion which speaks from past as well as current experience(s). This is based on my days as an avid radio fan both of CB and HAM. Before and AFTER becoming a VE. By the way, my love for electronics started with 2 different fields. CB and Astronomy, at the age of 12. I know I'll be flamed for some or all of what I am about to say while some may agree in whole or part with what I have to say. Also, I don't consider myself to be a great writer or speaker by any means, so if anything comes off as redundant or illogical in phrasing, my apologies.

Amateur Radio is going to change one way or another whether we like it or not. It already has "long" before the restructuring. Recall the arguments with the NO CODE license. And it went back even before that.

I'm not saying I'm for or against CW even though I myself, am not an avid user of it. But I fail to see where it has kept anyone off the bands that should not have been there, or stopped any use of the bands not originally intended. Meaning anyone can go and buy a used HF rig OR new, and put up an antenna and talk. Even steal a call sign. ANYONE can get on and swear till the cows come home. CW won't stop any of it. Even now, you can get on the "Extra" bands and hear it.

As for theory, I personally know Generals through Extras, who can't solder, much less troubleshoot. I know one EXTRA who doesn't even know a fuse symbol! I know too, of some who were great at memorizing enough to get the licenses, even commercial licenses, but couldn't troubleshoot a radio if their life depended on it.

I ALSO know some 2 way radio techs who are very good in their fields and either can't get the code or don't have time to learn it due to jobs and family life. So, does this make them any less of a future good operator? NO. Actually, when they are done working, they could care less about having to learn code.

CW ALONE does NOT constitute a good operator either in the mode itself or the learning of the theory to make a good operator. They don't really work hand in hand. Even if the code had been wiped out altogether, anyone can learn theory enough to pass the exams.

The ONLY way you can truly pass an exam in MY opinion is to NOT know what is on the exam, therefore one MUST LEARN all they can so as to be properly

prepared for any questions that may come up. Knowing in advance as is the case now, is EASY! You don't really LEARN that way. I recall a few years back, when the FCC issued a SAMPLE test format it was MAYBE a sheet or two of topics and sample questions for a given element. I still have one that they sent me when I inquired about the Novice and Technician exams. You never really knew what to expect, therefore you had to be prepared, or you wasted a trip, money and time. There were some who started producing books by asking people who came out of exams, what types of questions were on the exams so a study guide could be produced. I think there were others that followed suit. I can't recall when the actual step was taken to make public the pools so that it would lead to the present testing we have today where ALL possible questions, answers and distractors are made available.

All one really needs to do, is read the book through once or twice and they can usually start using common sense to come to the right answer by the third try. It's almost like stealing the test off the teachers desk. Look it over a few times and know exactly how to pass it. You don't learn by that method no matter how hard you may argue the fact that you do.

But that still doesn't make one proficient at troubleshooting or repairing radios. "Talking" into a microphone, is like CW, a language. Whether you are speaking English or trying your hand at learning Spanish or French, in which case, it would be very similar to CW. A NEW language for the beginner. But you can curse in FRENCH, SPANISH, ENGLISH and CW. Whether you can speak in a foreign language or do CW will not give you the miraculous power to repair a radio in the event of a problem.

If we all want better radio communication and policing AND a FUTURE of experienced electronics people, it is up to ALL OF US, to join together in at any level to help make it better. To NOT tolerate that which will destroy it as we know it. Instead of BASHING those who can not learn CW or choose not to, help make them better operators by understanding the THEORY that you know they WILL need to know to keep the hobby as well as RADIO alive.

Maybe you like (love) CW, maybe you don't. THAT alone, won't make or break the future of radio. Yes, maybe CW can and does get through when voice wouldn't. I can set a couple examples right now, but that isn't my point. It shouldn't be made the central focus of trying to entice our future generations to learn how to enjoy or get into a skill of electronics.

There are a lot of laws in radio and in many other areas that are not just. They serve a few and not the majority. A prime example in radio is this. And I KNOW before I say it, some will get upset, but I'm not saying it to pick on a certain group.

Hams now have to learn RF safety rules. To know when their RF levels may pose problems in health and interference. Yet you have CBers who alot of whom run lots of power and think nothing of it. THEY are not held accountable. Is it fair to the hams? NO. But, the CBers are not allowed by law to run that much power and they know it, but do they care? NO!

But then is it fair to keep someone out of radio just becuase they can't learn dits and dahs? NO. Maybe that future Ham, a current CBer, can get licensed and MAYBE - LEARN how their signals may affect others. To LEARN that POWER isn't EVERYTHING!

I'm still involved in CB as well as Ham. But in both cases, I'm lucky to pick up a mic twice a year to ENJOY talking. The most my HF rig has been used in two years was at Field Day and not necessarily by me. After fooling with radios most of the day doing repairs, I don't care to look at a radio. EVERY field, has it's bad apples. Hams, CBers, Computer Internet users. Even professionals. Its a matter of tolerating it or not.

I do currently hold both an Extra Class license as well as a commercial license. But I can tell you, CW does NOT help me in my job repairing radios. It does NOT keep me from hearing the garbage on the "General" to the "Extra" bands. Let's quit using CW only, as a cop out. Let's get to the real issue(s) whatever they may be. I recall when guys used to say to me, I'd like to get my kid started into electronics and into ham radio because it's clean. NOT ANYMORE! I recall when people flocked to three different exam sites I worked with to get licensed or upgrade. NOT ANYMORE! And this was ALL long "before" the restructuring.

You like CW with your radio, like salt on food, others like no cw with their radio, like no sodium allowed. It's a matter of TASTE! To each their own. But let's not rip into each other for what we prefer. If CW is the ONLY thing that keeps us ALL from getting along and advacning the future of radio, it seems kind of stupid to allow such a petty issue to do that. When we're all lying there dying, will CW make us any better humans? NO. When you stop to think about all the insults you may have flung to others just because of CW, will it really have been worth it? NO! If you were to be embroiled in a dispute with someone over CW and get so upset as to have a Stroke or Heart Attack, will it have been worth it? NO! And ADMIT IT, some of you DO get VERY upset over things. I don't know you, but you know who you are. Will being an opponent or proponent of CW save your soul? I DOUBT IT! It's a short life, let's try to get things to where we can all live more peacefully. Trying to set a standard for good living for our kids and grand kids, trying to push for more advances in the fields of technology sure isn't going to be centered around CW. The internet has nothing to to with CW except the arguments over it about it. Most kids today are computer whizzes, not radio techs. Talk internet to them, they'll talk to you. Say CW, they'll say WHAT? Changes will come about whether we like it or not. We don't have to like it, but we can try to make sure it's able to be tolerated. Like food, we all have to eat. We may not like the cook or HOW they cook, but that is something we can learn to tolerate. If radio is to survive and the field of electronics where radio is concerned, CW or NOT, we must make sure the THEORY and EXPERIENCE is passed on.

There are too many more important issues in this world to put our energies into, than to "bitterly" argue about a single mode of communication. I'm not saying it can't be discussed, but to allow it to tear at our souls,

tear apart an otherwise worldwide community is really stupid.

Let's do what we can to make this 21st century a much better one than last. Put aside the issues that really don't solve anything and work on those that do.

Just my two cents for the new milennium. Happy New Year and Millennium and good radio operating to all.

344. WTB: Connector for R599/T599

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-05 00:00:00 UTC
From: "James D. Jorgensen" <jandrjor@interaccess.com>
Message-ID: <387393B4.216FA38F@interaccess.com>
Source record: 73579

I'm looking for the cable that connects the Kenwood R-599 receiver and
T-599 transmitter or for one of the connectors so that I can make up a
cable. (I already have one connector). This connector is a 16-pin
style made in Japan.
Thanks for your help.

345. Help Needed With Crosley

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-05 00:00:00 UTC
From: n3ab@fast.net
Message-ID: <38769987.2588328@news.fast.net>
Source record: 73580

I have a small Crosley ES-30 receiver that I need help with. This is a 3-band radio (AM, 2 SW bands) using miniature tubes. Three of the 5 wires that connect to the rear panel are torn off. Can somebody help me with a print or tell me where to solder these wires?

One wire comes from a wiper on the bandswitch. Another wire comes from pin 1 of a 12BA6. The third wire comes from one of the antenna coils (looks like the coil for the BCB). The 2 wires that are still on are connected to chassis ground and a contact on the bandswitch. Can anyone help? Thanks for reading.

John N3AB

346. 500 kc shipboard CW transmitter for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-05 00:00:00 UTC
From: jeffreyh@hawaii.EDU
Message-ID: <Pine.GSO.4.10.10001050856490.15700-100000@uhunix5>
Source record: 73581

I'd like to offer the following transmitter for sale:

Transmitter tag reads:

"ITT Mackey Marine Reserve Transmitter Type 2017A
405-535 kHz, 40W output, A2 emission"

Almost new condition except for some scratches on the top of
the chassis (probably from rack mounting).

Crystal-controlled with the following frequencies:
425, 454, 468, 480, 500 kHz (all in A2!)

Front panel: Antenna tuning controls (course and fine), 0-5 amp
antenna current meter, channel selector.

Solid state.

$295 + shipping from Minden Nevada 89423 (should be $30).

Also have a Radio Shack DX-160 desktop shortwave receiver from the
mid-70s: $70 + shipping.

73, Jeff KH6O/6

351. F.S.: Drake R4C, T4XC + AC4

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-05 00:00:00 UTC
From: "David B. Rogers" <dr7zyq@nidlink.com>
Message-ID: <3873A6AE.304D@nidlink.com>
Source record: 73586

I have two Drake items for sale.

Drake R4C

Serial # 28---

.250, .500, 1.5 kHz filters mounted on back

Noise blanker mounted inside

Overall, at least a 9/10

The case has some scratches, nothing major. The most critical would agree the top case is at least an 8.5, the rest is fine. Works great, but has had only limited use last 10 years. Been kept primarily as a "tropy" rig.

Includes an original manual.

$500.00 including UPS shipping insured to ConUS. Outside of US would be $525.00 (because of the additional work getting it shipped) plus actual UPS charges (probably $100+).

Also FS:

Drake T4XC

26--- serial number

I bought this to go with the R4C, but have never used it. It is in excellent condition -- 9/10 -- except that it is missing the silver dial insert for the VFO dial.

AC4 supply included.

When I bought it, I was assured that it worked perfectly, but have never fired it up (had about 5 years). So can't guarantee finals.

No manual -- but can provide a T4XB manual.

$325.00 shipped ConUS (that little a.c. supply is heavy).

I have original Drake boxes for these rigs, but I believe the receiver box is marked "R4B" because of a mixup in an earlier sale of my older receiver.

Non-smoker (meant to be informative, not combative).

Thanks,

David, WA7ZYQ
north Idaho

352. Have 11AF9 tubes-need sockets

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-05 00:00:00 UTC
From: Roger Leone <arleone@inreach.com>
Message-ID: <hNNc4.29$Ru.1828@news.inreach.com>
Source record: 73587

I recently got 11 of these interesting tubes. Does anyone know of a source for the 10 pin sockets? I tried the obvious places on the web with no luck.

Also, 11 of them is more than I am likely to use and would be willing to trade some of them for sockets. They are NIB, 10 Sylvania and 1 RCA.

Please reply via e-mail direct...thanks

Roger K6XQ

Who says "no commercial manufacturer makes anything but zero bias gorunded grid type" amplifiers? One I can name among others is QRO. Sorry Ross but your
wrong! But I do agree that for a first time project the zero bias, grounded grid amplifier would be much easier to do.

I do like my easy to tune, low power drive, grid driven QRO HF-2500DX.

can anyone explain why whenever i read in the ham mags about a ham being busted by the fcc it's ALMOST ALWAYS an extra class. seems to me the extra class should get some class.

can anyone explain to me why hams are always whining and cryiny about c.b.ers? 90% of the hams were c.b.ers themself at one time.

can anyone explain to me how hams know so much about c.b.ers? seems to me if one stays off 27Mhz.....

lots of extras BUYING thier vanity calls. they took advantage of something? no the paid!!!!

you guys don't start a thread you start a rope! becareful you don't hang yourself with it!!!!!!

The FCC is like the FBI- they gotta have "the big play."
You can't make a name and get funding going after
minor bit players and penny-ante hoods.
They don't have time to waste with RFriffraff.
They go after major, big-time bad boys with REAL tickets.

(tongue firmly in cheek,)
Dave S.

Many of us "old farts" think so too, and that's why we
wrote comments to FCC in support of a 5wpm General class
license. What we DON'T see is the lunatic change that
essentially turns the entire ARS into one huge
Novice/Freeband.

> Rhetoric program?

--> My post was mild compared to a lot in this thread. I'm not sure what in particular made you feel you should single me out, but hey, it's not my business. Yes, my post was a little bit baiting, but it was meant to be tongue-in-cheek, as was my comparison of the previous poster to Nixon; unlike Nixon, he appears to have some moral integrity. And unlike you, he didn't take the bait. Maybe he possesses a sense of humor.

> After the hip, yet clueless of MTU have thrown away their rudders, it's
> understandable how they would consider smear and fabrication as
> acceptable tactics of debate.

--> Frankly, this item went beyond debate and into the realm of personal attacks and flaming long before I entered it. Your stab at my college is amusing, but I can't say I feel enough attachment to the place to take any offense at it.

As far as my .sig quote, it was a somewhat random line from a song that I found somewhat poetic. You can, of course, read into it whatever you like. That is, after all, the idea of a lot of lyrics and a lot of poetry.

Source record: 73452

I'm looking for an hf amplifier (160-10m preferred, but will consider 80-10m) that will provide about 500w CW output from 10w in. An NCL-2000 or a homebrew with pair of 4cx250b's would do the job. It doesn't have to include the PS.

I'm not interested in sweep tube or solid-state amps. Pretty much will have to be a grid-driven tetrode.

73,
Vic, K2VCO
Fresno CA

For Sale:

An array of Lambda power supplies in a Lambda universal rack mount assembly. Contains a 5 volt 200 ampere supply, a 5 volt 120 ampere supply, and a 2 volt 200 ampere supply. All three supplies float and can be connected in series from the rear of the unit. AC power is via standard IEC power cords and can be powered from either 115 or 220 by moving a selector strap on each power supply. The package is the newer Lambda brown front panel with circuit breakers and pilot lamps on the front. The unit is about 5 1/4 inches tall and 20 inches deep. I can lift it and would estimate the weight at less than 100 lbs, but not less the 75 lbs. Will send exact weight and dimensions to interested parties. This unit will power nearly any 12vdc radio or other mobile apparatus that I can imagine. A 5% delta adjustment on each power supply allows for putting the unit quite near 13 vots dc. It also has remote sensing schemes which will allow the supply to be tweaked to even higer voltages if desired. And of course with remote sensing it will guarantee the desired voltage at the load if desired. No documents available. Condition is like new.

$225 plus ups on approximately 80 lbs from zip 95287

Hmmm. And I thought accomplishment in Amateur Radio started AFTER you were licensed (like building, experimenting, DXing, Elmering, etc.) Judging one by the class of licence they hold (not to be confused with the class THEY have) is like judging a book by their cover. Get to know the individual first.

Which is? And when were you licensed?

The really old fashioned way required 10 WPM - sending and receiving.
And the question pool was NOT published. You were required to draw
schematics as part of the written test.

Not unless you were licensed before WWII can you claim to have got yours
"the old fashioned way." Now quit YOUR prancing around.

Source record: 73465

Hello...

Since the PRC-74 I've got is upper sideband only (yes, I knew this when I got it :-)), and there is no way in he@# anyone is going to talk to me on 40m or 80m usb, does anyone have details on modifying it for lsb? In particular, I understand that there are a few lsb filters around here

and there that can be installed to accomplish this. Also, from checking the depot service manual, it appears lsb could be used by modifying the RF module...I have a spare RF module (lucky for me!)

I guess what I'm really needing is a source for this filter...or any other hints on this from others that have performed the mod...Has anyone else on here done this to their PRC-74A?

Please send any helpful info! Tnx es 73!

It looks like the Russian submarine has been withdrawn. The item number
comes up as canceled/withdrawn.. maybe it was a model with a high price
tag to make it look like a real sub for sale..

>>in your line of fire. How could you justify shooting such a bystander,
>>Cecil? "Whoops"?

>If you are in my line of fire, you are trespassing in my home. I
>wouldn't exactly call that an "innocent bystander".

You apparently forgot what you wrote, so I included it above
(you conveniently edited out a critical statement). Above, you're
defending us against "those criminals when no policemen are
available" -- this is all taking place in your home now? How did
we suddenly go from the street to your home? Or are you a street-
person whose home is on the street?

Now answer my question:
If I happen to be an innocent bystander behind those criminals, in
your line of fire, how could you justify shooting such a bystander,
Cecil? "Whoops"?

Remember, we're on the street as you implied above, not in your home.
Don't change the setting just because you can't answer my question.

Like the subject heading says, Ii¿½ve got a TON of stuff that has to go. Ii¿½ll mention a few numbers here, but you REALLY ought to check my i¿½online garage saleï¿½. I have pictures of EVERYTHING posted there.

Tube numbers; 6336A, 6528A, 5608A, 6130/3C45, 7189A, and more.

UTC CG-48C 75 Hy choke, some assorted Thordarson and Ferranti reactors.

Hewlett-Packard and Burroughs nixie displays.

An assortment of phototubes; 5581, 5583 (with 3-pin socket), and 1P39.

LOTS OF OTHER STUFF!!!

Please check the website at;

http://members.aol.com/Reactor001

Interested in anything? Please respond by email.

Regards,
Tom Mitchell

Yes, of course David, it was all due to your use of a redundant hyphen.
It had nothing at all to do with your attempt to snidely inject the
spectre of an awesome Richard Nixon or your use of the baiting phrase
"commie pinko bastards." Is there no emphasis on ethics in MTU's
Rhetoric program?

After the hip, yet clueless of MTU have thrown away their rudders, it's
understandable how they would consider smear and fabrication as
acceptable tactics of debate.

The above post really makes me want to vomit. It's this kind of liberal crap that ruined ham radio to begin with. "....oh, well, let's all be good amateurs and help those newcomers who are coming (flooding) onto our bands and who will be followed by others (some who probably can't even speak English!....) who do not have any proficiency of code.

The fact is, the liberal weenies have been destroying ham radio for years. And at the forefront of them is the ARRL who went from being

totally against a no-code license to totally in support of it in the course of time it took for one issue of QST to come out.

Why? Easy!

Because hams lost 2 megs of the 220 band. And the ARRL figured that larger numbers of hams would prevent any future loss of bands.

....the problem with the above is that "quantity" has NEVER been a good substitute for "quality" and I would take quality over quantity any day.

Hey you lazy weenies out there: The fact is, whether you like it or not, when the test for obtaining a ham license was harder, when the code test was harder, when you actually had to know some electronics theory and when you actually had to demonstrate such, ham radio was a much better hobby than what it is today.

In fact, if one could (or would) draw some sort of graph displaying how the hobby has deteorated, it would be an obvious display that such deteoration was strongest just after each and every time that the requirements for obtaining a ham license was lessened or "restructured".

After such, the line to that graph would simply keep plummeting down, steadily for sure.

Oh, well, ham radio is a dead hobby.

: Dave S.

I think you're jumping the gun just a bit, first off
YOU DON'T KNOW ME, or what kind of person I am. How
dare you make assumptions that I'm going to be throwing
anything in you're or anyone's face about the fact that
I got an easy way up. I passed my license 11 years
ago and I just can't get up to 13 words a min, heaven
forbid 20. I'm a damn good operator, and I'm civic-minded.
I'm not the lid or CB'er you people make us Techs and
novices out to be.

I don't know what kind of hams you have where you live
but if they are the snobs you seem to think they are well
just say to hell with them and ignore them and move on.

There are a lot of Novices and Techs and Tech-Plus that
are fair and kind and only want to enjoy the hobby and not
hurt it, and I think the FCC finally cutting back a difficult
restriction that is keeping me from a part of that enjoyment
is GREAT. I've always wanted to win some awards but its next
to impossible to get any working 10 meter phone only. I've
always wanted be a part of HF traffic nets and emergency nets
but there isn't much for 10 meters so that excludes me. Not
any more though, and thats why I'm happy. I've spent 11 years
on 2 meters and I'm ready to begin talking on my collins Sline
and Kenwood TS450 on something other than 10 meters only when
the conditions are right.

And I promise you when I pass my Extra exam with my 5WPM code under my belt I won't be throwing it in your face, all I want is to be accepted as a seasoned amateur who has and will continue to contribute to the hobby to make it better, never to hurt it or anyone.

73 to you, and to everyone who reads this, and I hope to work you on the bands some day. Jimmy, KB5FSV

The big problem we have as BA collectors/users is that we often take up too much room, and they're in a corner of the garage. There's an alternative!\
1) well shielded
2) easily movable
3) distance to your DX targets only a temporary issue
4) BA radio weight not an issue
5) no property taxes
6) not visible to neighbors

Someone has a Russian Navy submarine for sale in Scandanavia! Bidding starts at $495K, not an outlandish price. The fuel is diesel--easily obtainable--and it probably can be modified to rather decent living quarters. And of course, if you owe taxes to the IRS, this is somewhere where maybe the CAN'T reach you. Use Search on EBay (this is not my listing, so I hope it makes through the Newsgroup filters)

The connector that you need is not hard
to find. You can buy them brand new
for about 6-10 bucks each. Amphenol
sold off part of their connector division
to WPI. WPI bought the inventory of
all of our favorite connectors and the tooling
to make more about 10 years ago.

The connector that you want is listed
in my 1998 Newark Elecronics catalog
as a WPI 80-C catalog # 39F007. It
lists for $12.97. My local distributer
in Appleton, Wisconsin sells them for
about 8 Bucks.

WPI makes all of the old commercial
plugs that go in the back of our old
rigs for accessory hook-up. The
11-pin plug is a 86-CP11, Newark
stock # 42F037 and lists for $3.56.

I am constantly amazed that these
connectors are advertised as "exotic"
or "rare" when sold for scalper prices
on swap-nets and eBay. They are
still very common.

By the way, I called WPI a few years ago
and asked them if they still carry the
9-pin accessory plug as used on the
Johnson transmitters....they do not.
But, the sales engineer checked and
said that they still have the tooling to
produce them. I would have to order
about 10-thousand....hmmmmm.

So, call Newark or check out your
local supplier and see if they
carry WPI connectors.

To a degree you are correct. I think that amateur radio is also a product of the times. Thirty years ago societal attitudes were completely different than they are now and, as you say, the amateur service was a much better place because of it---I am happy to have been a part of it.

You are correct in you observation regarding the general pattern of deterioration but there is more... Consider, deletion of log keeping, allowance of VFO, higher power and HF voice for Novices, the institution of the volunteer examiner rather than appear in person in a Federal building and taking the test in front of an FCC officer, call sign issuance changes which upset order in amateur recognition (beginning with 'N' calls in the mid-70's), slow and consistent de-regulation---and there is probably more I haven't mentioned begining with the loss of leadership from the ARRL and of course the profit motive which seems to dominate the present day amateur service...

I suspect that restructuring will result in temporary growth for it's new appeal, when the novelty wears off the active ham population will drop to a lower level than it is now---kinda like Cabbage Patch dolls. Most likely by then the INTERNET has taken hold and like all nice sheep we will be sending our messages via digital pathways that will be monitored; for reduction of crime and terrorism---and for the CHILDREN!

Interesting, I really don't think current amateurs would be so upset if restructuring brought a population of responsible operators. I feel that amateurs are a tolerant bunch but their (mine) fears of a CB invasion are justified. The technical aspects of amateur communications via mainstream amateurs has largely been resolved---I would like to see an improvement in the quality of communications to take place on the amateur bands. Sure, DX contests but how about an increase in sharing and understanding that usually develops from thoughtful conversation with stations here and abroad---the CULTURAL aspect of amateur radio. Really, who do we have to blame for loss of interest in the amateur radio service? Operators can only talk so long about their store bought radio, standing wave ratio and antenna before saying 73 and see you down the log. And to a large degree I blame the ARRL for this---maybe great with technology, but what about the human experience? In part they provided the tools but forgot about their use; besides contests, what to expect from a bunch of ARRL techie nerds anyway---not much in the way of literature, geography, history, religion, art, philosophy, geology, meterology..... We have received enough direction in how to organize electrical components on a pc board for some particular result, it's time to use that box of radio parts to maybe learn something about the geography of Morocco for instance.

I, and many of you, will recall our struggle studying for the code examination. All I had was an Ameco code record that I picked up at Lafayette and when I memorized that I made my own code tapes. Gee... 5 WPM... I passed the examination by mentally counting out how many dits or dahs a character had before I wrote it down on my answer sheet---but I made Novice and then Extra and eventually the FCC Radiotlegraph license as well.

That's what I find so odd, thumbing through any catalog or radio magazine (QST especially) I find a seemingly unending offering of code tapes, computer run code generators, code readers, classes offered for learning the code and that's not the end of it---telegraph keys, semi-automatic bugs and keyers, electronic keyers, memory keyers fancy custom made keys out of polished brass and rare woods costing hundereds of dollars---is there an end? WE DIDN'T HAVE THESE RESOURCES but we learned the code anyway so I ask, what is the problem with the learning the code today? A merchant sea captain went from knowing nothing about radio to advanced class operator in one stroke by mastering the code in a few months using code tapes and studying the theory texts---isolated example or initiative, drive and passion?

Selling one used Heathkit 400 Hz CW filter. Works in
HW-101, SB-100/101/102, SB-300/301/303, SB-110/110A.
Good physical condition, not tested, but I've never
had a bad one. This one's from a parts rig that I
didn't attempt to fire up. Price $45 postpaid and
insured to any US address. Overseas... we'll talk.

The cb band is a perfect example of what kind of radio operation that
low (read that no) requirements makes.

>
> Oh, well, ham radio is a dead hobby.

The new structuring will certainly bring more people into amateur radio,
but you are correct, real ham radio is just about gone.

407. HEATHKIT AND JOHNSON 2-PIN MIC PLUGS

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-06 00:00:00 UTC
From: wb9gkz@aol.com

Source record: 73535

WPI is still manufacturing all of the old Amphenol connectors including the 80C mic connector. Newark Electronics stocks them as catalog # 39F008.

You can find the full line of WPI connectors in the Newark catalog. WPI bought all of the tooling from Amphenol to keep us in supply for years to come. Your local electronics jobber probably carries them for about six to nine bucks each...mine does! Why is everyone flocking to eBay and Surplus Sales Nebraska (he probably buys his from Newark in 50+ quantities!)?

WPI also makes the 8 and 11-pin accessory plugs and caps for our boatanchor transmitters such as the HT-37, HT-32 and Collins, etc. Three folks just got ripped-off on eBay for these 11-pin connectors for about 20-bucks each.....Newark sells new stock for these "rare" items for about 8 dollars. Don't want to buy in quantity?....look up your local supplier.

WSI factory sales can be reached at 1-856-935-7560. Ask them for your nearest distributor.

Hope this helps a few folks out there.

I think I should also state that I am in support of the new reduced code speed. I see no reason for a requirement for higher speeds to obtain a higher class license. Anyone can learn 5 wpm and for those who like to operate CW will do so and increase their speed because that is what they want to do, not because they have to to qualify for some higher class of license. Those who do not like to operate CW won't and that is just fine also. The problem is the multiple guess exam that anyone can pass by simply memorizing answers. There are Extra class hams who don't even know which end of a soldering iron gets hot, some can't even recognize a soldering iron. I hear new hams on 10 meters on ssb in the cw portion of the band because they don't know where the phone portion of the band starts. We need better testing of radio theory and operating procedures. It needs be to harder, not easier to get a license. Your are less likely to abuse something you worked hard to get, but we will always have the wellfare mentality of those who want everything handed to them with no effort on their part. For those types, the cb band is just what you want and deserve.

409. Comments on a EX-HALLICRAFTERS EMPLOYEE

Newsgroup: rec.radio.amateur.boatanchors

Hey Folks,

Seeing alot of "comments" on the new License Structuring. Here's my 2-cents... consider this: I know a guy in town that is very well educated in the radio-art
and is an ex-Hallicrafter employee. He is currently a Tech-licensee. He tried for years but just could not pass the 13WPM.

Imagine the benefit of getting him on the Low Bands (maybe even AM). Stories to share, things we could learn from his past experience(s). These and many others are the people we will be bumping into later on this year as they start exploring the bands.

Just something to think about.

Pat, WB9GKZ/WPE9JRL/KCR-1567

Before I retired as production manager at the local daily newspaper, we had an employee who folks would ask questions of concerning technical or general interest aspects of our operation (after learning he was a "newspaper employee")... He could rarely provide the info they wanted.

He was our janitor...

As a licensed activity, we have long had a specific route to follow and exams to pass to become qualified licensees - WHO we are, WHERE we come from or how "nice" or "interesting" we are carries NO weight to our entrance into the "hobby" - only our ability to pass the established entrance exams - whatever they may be at the time.

For THAT matter, since the OUTER metal parts of the plugs are pretty universal, a fella' with some ingenuity and imagination needs only to mold the inner block and pins out of epoxy, using a sacrificed outer portion of another type plug... I've done exactly that in past years with older surplus stuff. Failing that, just install a later panel receptical (Radio Shack sells them), rewire it for the contacts you need, and then use a later mic plug to match. So you have some extra unused pins - so what?

>Does anyone know what hamfest in Texas is happening tomorrow

Here are the details, Dave:
Opens 8AM, 7405 Old Pearsall Road, San Antonio; sposored by the San Antone RC.
I'm going to drive down from Austin and take some boatanchor goodies with me.
Was planning to set up in the parking lot but looks like the wx is going to
require that I rent a table if they have any left.

431. Since when...

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-07 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <nJtd4.2$qw5.399@dfw-service2.ext.raytheon.com>
Source record: 73409

Just wondering... this is a newsgroup for discussing
and buying/selling/trading BOATANCHOR gear, right?
By definition, BA gear is old tube-type stuff, right?
Since when did late-model Icom, Kenwood, Yaesu, Ten
Tec, and other gear become BOATANCHORs? Lately, it
seems there are as many posts for late-model gear as
there are for BA gear. What gives?

73,
Dean, K5DH
(having a bad day; need to bitch about something)

From: Bob Weiss <bweiss@carroll.com>
Message-ID: <3876687F.4FFAE46@carroll.com>
Source record: 73411
Cross-posted to: rec.audio.tubes,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.swap

All prices plus shipping from 07657.

1.) Pair of Bogen MO-100 monoblocks. These are the early version that uses 6550's, rather than 8417's. With mounting rack. 100 watts/channel tube power amps. Sound great--recently rebuilt (3 months ago) with modern electrolytics and Svetlana 6550C tubes. $400 for the pair.

2.) Oregon Electronics vacuum tube regulated power supply. Model 5-3. 0-500 V @ 500 mA adjustable HV. 0-150 Bias. Dual 6.3 V/10A filament outputs. Volt/amp meters. A great testbench supply! Uses 4 Amperex 807 tubes as pass regulators. $150

4.) Good, used, tested Telefunken smooth plate ECC83/12AX7. Pulls from test equipment. $15 each

5.) Good, used, tested Amperex ECC88/6DJ8 "Bugle Boy". Pulls from test equipment. $15 each

6.) RCA 810 triode. JAN type CRC-810. Pull from unused equipment. $40 --With Johnson socket and Triad F-33U filament tranny $55

7.) Penta Labs PL-254W Triode. Pull from unused equipment. $25

8.) 2 pcs 4E27A/5-125B pentodes. 1 Eimac, 1 Sylvania. Both are NOS, but Eimac box is missing. $30 each or $50 for the pair.

9.) Westinghouse 5CX1500A pentode. Pull from working equipment. Tube tests good. $75

10.) RCA radiotron UV-201A Used, tests good. Brass base early triode. With bakelite "breadboard" socket. $30

11.)Modified Techron 8521 power amp in roll-around 19" EIA rack. Can deliver
over 5kW into a 2 ohm load. Frequency response DC-50kHz. +/-140V output.

Unit was a pull from an MRI scanner, and has been modified to operate from single phase 208-240 VAC power. All modifications professionally done. (Original xfmr, filters, rectifier removed, and replaced with fully rated single phase equivalents) Possible uses:

Motor driver
ELF transmitter
Shake/vibration testing
Stadium/Concert hall PA system
General scientific research

Or use it as the biggest subwoofer amp on the block! Just the thing to wake the neighbors early on xmas day! :)
Best offer over $750 takes it. Unit is located in Northern NJ, and will deliver within 50 mile radius, or you can pick it up. This thing is HEAVY, but will ship via truck if desired (at buyers expense for shipping and crating).

12.) General Radio (manufactured by Tektronix) X-Y display scope. Great for checking phase shift, plotting output of a curve tracer, or just hooking up to your system for the "trippy" lissajou display.:) Great condition--VERY bright CRT with no burns. $35

13.) HP 651A Audio Oscillator. 10Hz-10MHz sine wave. 19" Rack Mountable Good condition. $75

14.) Boonton Radio (HP) 202H RF generator 54-216 MHz AM/FM Rack Mount Good condition $50

15.) Tektronix R5103 oscilloscope. Mainframe is in good working condition. Accepts all 5000 series plugins. Comes with 5A16 dual trace amp and 5B10 timebase. Plugins need work. $25

16.) A bunch of NOS tubes. Mostly RCA, GE, Sylvania. Many industrial types.Want to sell them as a lot. $300 for the lot (189 pcs) Types and quantities as follows:

Hey guys,
Why do I never see an add for used Hallicrafters HT-46 TX and SX-146 RX? Are they extremely rare or have all of them made their way to the big hamfest in the sky?
Who has operated this set of mirror twins? What kind of features did the receiver have? What is the going price for this pair if in fine to mint shape? They look sorta like a 2 meter AM rig Hallicrafters had out about the same time. I have always wondered why I never see them at hamfests (I see lots of HT-44 / SX-117's). The Hallicrafter's collector association has NOTHING on their website about them. Do they really exist or did they never go into production? I would love to have BIG jpg pics of both units with good detail, or a link to some pics on a website. Will a Hallicrafters expert clue me in please! Post to newsgroup so we all can be enlightened.
Mark W4UDX

>extra class should get some class.

OH? and you source of info is?

>can anyone explain to me why hams are always whining and cryiny about
>c.b.ers? 90% of the hams were c.b.ers themself at one time.

"90%" eh? And you got those figures where?

>can anyone explain to me how hams know so much about c.b.ers? seems to
>me if one stays off 27Mhz.....

Doesn't really take much exposure to figure out a rotton opereation -
it's REAL easy to spot a sewer farm from a LONG way off - a mere *5
minutes* listening on the "children's Band* is all that's usually needed
to figure out the "quality" to be found there... If *I* wanted or envied
what goes on there, that's where I would regularly hang out... ON THE
OTHER HAND, if I am appalled and offended at the filth and juvenile
behavior that passes as "normal" there, WHY would I actively campaign to
get THEM over into MY place and activity of choice? I don't do that with
where I live, or the places I go to eat or for entertainment - why with
Amateur Radio?

>lots of extras BUYING thier vanity calls. they took advantage of
>something? no the paid!!!!

>you guys don't start a thread you start a rope! becareful you don't
hang
>yourself with it!!!!!!

The "rope" you speak of is unlocking the DOOR that separates those
intereted enough in amateur radio to actually spend solid effort, time
and study GETTING there, from those looking for an "easy" way or back
door...

And you are CORRECT - I think we who value the Amateur Radio we have
long enjoyed - and entered by way of a harder path - ARE about to get
"hung" with yet another step down the ladder of a degraded pastime...

Subject says it all.

As a young SWL in the late 1950's I purchased my SX-28A from a Penns Grove, NJ ham princely sum of $125. It came with a replacement speaker, which I have since lost -- can any advise which it came with?

This old BA has been packed away for years, and after reading this NG for some time I am getting "funny" ideas.

Of course, getting one (and the endorsements) is a very worthwhile thing. But they'll be around for a while yet.

The ARRL Code Proficiency program and W1AW code practice and qualifying runs go from 5 wpm to 40 wpm, last time I checked. That's twice the speed of the 20 wpm code test. For many of us, 20 wpm is just the beginning.

>
> Thanks
>
> KA8GEF

The crystal is connected between pins 3 & 7.
Average Q = 100,000
Max. series resistance of the crystal = 500 Ohms
Tep. coeff: Less than 0.7 ppm/degree C between +65 and +75 C
Tolerance +/- 5 ppm @ 70 C
Reccomended operation: Series resonant
Maximum crystal current: Less than 500 microamperes

Hope this helps,

John

Robert, you have your @#$@#$ feelings pointing to the wrong group.
You need to focus on the FCC and the Amateur community. They are
the one's that got 'you' the loss of some frequencies above 50 mhz
not the ARRL.
You really need to talk to a professional person to get rid of the
rage you have...

D

Subject: Info on Halli HT-46, SX-146
I'm no expert, but I do have a SX146 that I acquired a couple of weeks ago.
Its set for some minor cleaning and a tune up. Never seen a HT46 though.
Don't have a clue as to their value. I think the BAMA site may now have a
schematic for the 146.

For Auction: This is a fun QRP travel radio The MFJ-9440X 40 meter QRP transceiver in excellent condition. Comes complete with mike, manual, DC power cord and original box. Used only a few times. Received great audio reports with it. Also has the CW board installed (optional) for full 40 meter band operation.
Light weight for travel. Maximum 12 watts output. Finally upgrading to

the K2, so this must go.
List for this at MFJ new including the CW option is about $290.

Dear P,

I have no idea the value or I would have posted a price. I have several offers already from this information? posting, one as high as $1000 & shipping. These are from a SK estate and I believe were backups or for parts? Guess I will get them out of trunk and check out serial #s etc. I also have another look alike 75s3 that has been painted bronze, no emblem and the model # has been filed off? They all looked complete though used and really dirty. (not corroded).

Thanks: K6ME

I came upon a real good supply of these tubes, here's a listing of what I have:

(17) 6146B/8298A GE, new tubes all in their original GE boxes, $22.50 ea., $45.50 per matched pair while they last

(2) RCA 6146B, new tubes in white boxes, $25.50 ea.

(2) RCA 6146B, very lightly used or new, can't tell, in white boxes, $19.50 ea.

(2) Sylvania 6146B, branded International in Int'l boxes, new tubes, $21.00 ea.

(2) Sylvania 6146B matched pairs, new in original boxes, $42.50 per pair.

Shipping is only $3.50 (USA only) or free with a >$50.00 purchase. Drop me a note if I can help you out, thanks.

Source record: 73371

Here is a method that has worked well for stuff I've sent and the good ones that I've received.

Before you pack a boatanchor, take the cover off and stuff the insides with bubble wrap. This will protect the tubes. But make sure you tell the buyer to take it out when he gets it. 8>)

Wrap the rig tightly with the big bubble wrap and tape it on. Then tape styrofoam sheets around the bubble wrap. Then stuff it in the box and pack tightly with styrofoam sheets or whatever you have that won't crush (Newspaper works better than styrofoam pellets). Seal this box tightly with tape, then put it inside another box that's slightly bigger. Always double box the heavier stuff. Shake the package or turn it over a few times to make sure nothing moves around. (UPS will turn it over for you after they start shipping it. They'll also give it a few drop tests on the corners, hence the reason for double boxing.)

501. Need Advice on HRO Coils

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-08 00:00:00 UTC
From: Harry Wilson <hwilson@nii.net>
Message-ID: <3877F726.E2025F34@nii.net>
Source record: 73372

Greetings,
Recently I purchased an HRO-5M as a restoration project.
The receiver came with only one set of coils for the low-end of HF.
I'm trying gradually to assemble a coil set covering most of the
spectrum. However, in looking at coils up for sale, I'm noticing two
specifications often assigned to them that I'd appreciate some
advice about.

When an HRO coil is described--- say a D-coil, 1.7 - 4.0 Mc
and with "band spread 3.5 - 4.0 Mc," does this mean the coil provides
both general coverage reception from 1.7 to 3.5, and then broader
coverage in the Amateur band? Or, does it mean that a coil otherwise
designed for 1.7 - 4.0 Mc was modified (by NRC) to provide Amateur
coverage only? I.e, if you buy a "band spread" coil, you can't use the
receiver to listen to broadcast AM outside the Amateur band.
Pse advise.

> 73 Harry Wilson

Harry - Most HRO coil sets have both a general coverage (wide band, say 1.7-4.0) and bandspread (80 meters) built into the same set. You switch from one to the other by removing the little stainless steel screws in the top of the coil set near the contacts and move them to the empty hole. One the HRO50/60 series, there are some little flip levers that do the same thing and are a much smaller pain in the ass to change from general to bandspread.

There *were* several bandspread-only coilsets made, mostly for the HRO50/60 as I remember.

Almost all HRO coilsets are interchangeable *EXCEPT* the 50/60 coil sets. These cannot be used in an earlier HRO such as your 5 because you'll break the ceramic contact support. And you can't use 50 coils in a 60 set becasue the 60 is dual conversion while the 50 is single conversion.

Hope this helps. 73 John

Harry,

My web page at http://www.io.com/~nielw/hro_coils.htm shows how to switch between bandspread and general coverage on the HRO coils. Be aware that some HRO coils in the this range are general coverage only. Usually you can tell from the lack of a bandspread calibration scale or the lack of threaded terminal blocks if general coverage only. Also, watch out for RAS coils. Special stamping on RAS coils described on my web page.

73, Niel-WA5VLZ

Howdy all.....Just wondering here how many of you also tune in W1AW to just "read the mail"? Seems I've been doing it on 'n off for years, sometimes as I tweaked or tinkered with some wheel-reinvent on the bench....and in later times as I struggled to comprehend a computer. Wouldn't admit it to just ANYONE, but I know, with no doubt, what the O/T's and instructors have told me over the year that morse really is music....just like an old friend talking in the room I find. Kinda sad to see so many trying to doom this old friend......with nothing to offer up in return.

For those who are interested:

I have posted copies of test procedures and alignment instructions for the Hammarlund Super Pro 400 SX to the Boatanchor Manual Archive at:

http://bama.sbc.edu/

The scans are in .gif format. There are nine pages, each being 20 ï¿½ 25kB in size.

These documents came from the Hammarlund factory and were intended for use by their technicians.

If there is any interest, I will also post the schematic to the same site.

You know, this line of reasoning never ceases to astound me. In one breath the FCC is condemned for being lax, and in the next, the big bad government is lashed for interfering, for doing anything, good, bad, or indifferent.

What about the 99 and 44/100% of a ham's radio career that happens after all the tests are over and passed? Whether you have testing as it is now, or go to a 35 WPM CW test, with a theory test that requires the examinee draw a schematic for a DC--daylight multimode, DSP, DDS transceiver with autotuner/memories/scanning/bandscope, what happens after the test is over?

Just as there are many current extras who cant copy 10 WPM on a clear band at 20 over, or who can't cut a half-wave dipole, there will be as many "welfare generals" who (eventually) tear along at 30 WPM+, and design from scratch their own rigs. The test is just the beginning. It has never been a true indicator or predictor of anyone's long term ability, intelligence, or interest level in the past, so there is no reason to expect that it will become such in the future.

Well, not much of an argument there.

> can anyone explain to me why hams are always whining and cryiny about
> c.b.ers? 90% of the hams were c.b.ers themself at one time.

Yes, but only because I was too lazy (or, too ignorant) to work at it. Once
I became a responsible adult, I went out and got my Ham ticket.

> can anyone explain to me how hams know so much about c.b.ers? seems to
> me if one stays off 27Mhz.....

Geez, the splatter on the 28 MHz band FROM 27 MHz is enough to give one an
idea of what happens on C.B.

> lots of extras BUYING thier vanity calls. they took advantage of

I've just finished parting out a Hallicrafters S-27 VHF receiver and
have a fair number of good parts left, un-needed for another project.
These include:

Front panel (nice)
Knobs (except tuning)
Function switch (complete)
Power Xformer
Chokes
I.F. Trans. (all)
RF assy subchassis (complete)
Ball-tipped toggle switches
Filter Cap assy. (yes.. surprisingly all 4 sections check out ok!!)
S-meter (guts are fine, case suffers per usual)
Dials (main is "usable" some cal markings obliterated but good dial, if
yours is broken, it would do the job. BS dial is usable but has crack
emitting from center)
Misc. other parts.

Let me know what you might need. de Jeep/K3HVG

I posted this once, but I think my newsserver screwed up.
Required reading for all involved in gun debates should be John Lott's
"More guns, Less crime", Univ. of Chicago Press. This is by a economist
who looked at facts and figures, not rhetoric. He actully was "anti-gun"
until he did his research. Hard facts and figures really changed his
mind.
If your gonna argue gun control, READ THIS BOOK. Just get it from your
library.

But, you know, when criminals murder criminals, other people tend to get caught in the cross-fire.
This has been happening in a certain part of this country for many years.
The last time I saw a gun (apart from visits abroad) was shortly after WW2. and the prospect of getting shot here never enters one's mind.
As you probably know, the police strongly resist being armed because they believe that
then the criminals will become armed in response and the situation will escalate. The majority of crime seems to be formalised at an implicitly agreed level of violence and discomfort to both sides. My neighbour's rather disturbed 15 yr old son might scribble minor abuse in the ice on my car windscreen, but I feel reasonably secure that he won't shoot me.
Using a gun means stepping outside the norms into dangerous territory - and so
is relatively rare.

However, once a norm where guns are carried as an everyday habit has become established, I can see that it will be very difficult to alter, since neither side wants to disarm first.
Perhaps you might agree that as a long-term goal, eventual disarmament of
everybody, in every community or nation might be a worth-while aim?
(I hope this has not come over as anti your great country, because my attitude is quite the reverse. If the USA did not exist, the world would have to invent it.)

Need some help from the ng...

I have a friend whose husband has recently died. He had a radio setup that he referred to as his "rig" but his wife can't tell if it's 10M or all/multi band. It is supposed to be a transceiver. He used to DX international, but her review of his log book doesn't give any clues. She said he never got a license so there's no clue there either.

She says that the name on the set is Galaxy Saturn Deluxe and it should be around 1992 vintage. The controls sound kind of standard, nothing out of the ordinary. It uses a Silver Eagle microphone and a T-UP9-DIOXSP whatever that is. Sorry, I haven't been around for a while and, although I have some knowledge of both CB and Ham, I'm not an expert on equipment and this is out of my league.

I'm trying to find out
a) What is this?
b) How much can she sell it for?

Sorry gang, but she's 400 miles away and this is the best I can do.

Really appreciate any information you might supply.

Thanks,
Ed

555. FS: Simpson AC Amp Adapt. for 260

Newsgroup: rec.radio.amateur.boatanchors

For Sale:

Simpson AC ammeter Adaptor model 653 for Simpson 260/270 multimeter,
Unit is in like new condition with original box and manual. The Simpson
multimeter slides into the adaptor which then allows direct acess to the vom
or AC amps in the ranges, 250ma, 1 amp, 2.5 amp, 12.5 amp and 25 amp. the
unit contains a precions Current Transformer (CT) providing complete
isolation between the adaptor and the meter. It can deal with older
260s/270s with either banana jacks or even earlier with pin jacks. This
unit will not work with the later square boxed 260s and I don't know if it
will work with the later simpson's with the OSHA recessed jacks.

$45 US postage prepaid conus.

Tnx for the read

Bob, KE6F

You've got to be kidding. Then who would put duck and venison on
my table? The great majority of guns around here in East Texas are
hunting guns. I get my two deer limit almost every year. I'll have
to post a picture on my web page of my garage wall of deer horns.

If you know anything about old military microphones,
please take a look at these:

http://www.arc5.com/new/mike1.jpg

http://www.arc5.com/new/mike1.jpg

There are no markings on the outside of the mike.
The element inside is marked "American Microphone Company JUL 1945."

These is no push-to-talk switch or handle. The mike fits
comfortably in the hand.

Anyone have a clue about this mike?

Thanks,
Dave S.

In response to several notes of encouragement (most not posted, but sent directly), I have posted the schematic of the Super Pro to the BAMA site:

http://bama.sbc.edu/

The schematic is 332kB in size, in GIF format, and presented at 4X original size. This enlargement allows for increased resolution when printed at 25 percent.

563. FS: Stancor power transformers, NIB

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-09 00:00:00 UTC
From: ovrreactor@aol.com-nospam
Message-ID: <20000108202448.03570.00001055@ng-fx1.aol.com>
Source record: 73381

I am selling a few Stancor power transformers, new in box, part number P-8365. Primary is 117 V. Secondaries are;

570 VCT (285-0-285) at 325 Ma DC
5.0 V at 6 A
12.6 VCT at 6A

The HV secondary is WAY beefier than anything in the AES catalog. And that's 400 VDC on B+, if you use a full wave SS rectifier circuit, or 800 VDC if you use a full wave bridge and ignore the center tap. (Obviously, lower B+ if you use a tube rectifier.)

SO WHAT if there's the filament secondary is 12.6 V! Just use half of that secondary for 6.3 V, and use a pair of resistors to ground to get the CT. OR you can use some 12 V variant "budget" tubes. I guess you could even use the 5 V secondary to run some 6 V tubes (or 5 volt variants).

There's a lot of different options for this transformer...just use a little imagination.

Asking $45, plus shipping (9.5 pounds).

Interested? Please respond by email to < OvrReactor@aol.com >.

Best Regards,
Tom Mitchell

I see your point, but you are too bothered about your pride. In a way, you are being as selfish as the criminals. Look at the whole picture. Because of personal (misplaced?) pride leading to guns being commonplace, your fellow citizens live in a country with (so I read) 9000 gun murders per year, compared to the UK's 30. Everyone has a 9000/120 greater chance of being shot so that you can maintain your self-confidence.
Give up the gun and have the courage to take the risk of being robbed by force majeure, (which shouldn't harm your pride at all - if an elephant treads on my foot, it doesn't make me feel small) so that the community in general will be safer.

Numerous studies show that states with less gun control have less
crime. 9000 killed out of 250 million, figure out the percentages
there. How many crimes have been prevented by gun owners? Lot's, you
just never hear about it.
16,000 people(so I hear) were killed by Drunk drivers, yet you can buy
alcohol in almost every petrol station. Those that turn their guns into
plowshares will plow for those that don't. Remember WW2? American guns
and firepower saved UK (so I hear) from sure domination from the Nazi's.
At least with having a gun I may have a slight chance of protecting
myself and others from harm, there's NOTHING I can do to protect myself
from a Drunk driver. Trot on down to the local pub and have a Guiness
and think about it. Plow on, Limey!
(sorry about the off topic post, I just couldn't help it!)

You can use the filter from the AN/GRC-106(*) exciter IF. It's the same
frequency but the opposite sideband from the PRC-74. Incidentally, I'm
looking for the filter from the PRC-74 so I can modify my GRC-106 for
switcheable sidebands...

Hello from NC,

I've had several calls telling me that they had problems when they
called the Sheraton about rooms for the CC-AWA Spring Meet
and were told that the room block was full.
This was a mistake. I just talked to the hotel manager and was told that
there are plenty of rooms and if the block gets full more rooms will be
added to the block.
I highly recommend that you call during regular business hours,
Monday - Friday directly to the hotel at 704-392-1200.
They have been read the riot act, and should have everything
straight NOW. I'm very sorry for all the trouble.

73,

Ron

1. 75-A4 (3.1/4:1,,,cca VG to EX)orriginal;(sn# 1897..)
2.TMC GPR-90 a 9.8 all over.....unbeliveable condition. Seperate
cabinet has been Prof. repainted.
3. Harris RF-550 (10hz-30mhz)with(ISB option, .4cps.tty/cw filter
option, selectable freq. up down switch option.) with the matching RF-551A
preselector in Desktop open frame mounting cabinet.. 9.5 on both and a killer
receiver it is... Maybe I should just smelt down the preselector as there is
more
gold and silver in there than I will get for it...Looks like a jewlers
paradise .
4. EFJ Thundebolt 2kw hf Linear,, another 9.8 with brandie new (nos
eimac)4-400A's wired for 220 Note: This one is a HEAVY 140lbs, will
have to pull trannys for shipping.
5. Collins ARR-41 in heavy desktop bud cabinet..2-25mhz miniature
version of the 390A for airbourne use. They were in C-130's and P-3 Orions to
name a few..
AM/CW with 4 and 500cps collins filters. A 9.5 all over..has a 110v/ 60
military power supply conversion installed in lieu of the dynamotor.
looks real cool. All black.
6. TMC TTY oscilator/exciter/vfo... nice candidate for a transmitter
conversion project (Large rackmount unit)
7. National NC-300 won't find a nicer one. Xtal cal installed and has
the 4H4C not a 6V6 in it's place. Not a mark on it and all the mods have been
done by W3HM.
All above work to spec.With either factory or manual copies.
Items are for sale as a package or as seperate items. Will take offers for
either. Or other BA type trades. Collins or TMC trades only. All plus
shipping.
More items to follow ...I am working on pics..

CECIL, have you noticed these bleeding heart anti-gunners ALWAYS *assume* those evil CRIMINALS will ALSO eagerly march right up to abandon THEIR weapons alongside their intended victims? WHY are the anti's so stupid, naive and steadfast in their blue-sky "vision" that the bad guys will as eagerly embrace and observe disarmament as those they PREY on for a living...

Even a hunter would be FAR less inclined to stalk a deer, if it had the capability to shoot back!

I was thinking of so-called 'mainland UK' as my example.
The Maze is in Ulster and there is or hopefully was a minor war in
Ulster. Of the two factions, the one regards itself as fighting a war of
liberation - and the other as fighting a war in defence of its homeland.
Mainland UK' might be called a 'gunless society'. I cite this region as
an example. Not in order to score 'Brownie points' for any Nation I
hasten to add, but just as an example of such a society for comparison
purposes.

Again. I don't know the statistics on this, but it certainly needs
publicising here if the rate of these crimes is higher than elsewhere.

> and security" - even as YOUR country was and did before your war with

> Germany.

All countries have their own interpretation of History. One extreme view
of WW2 (and WW1) is of the decadent states of Europe getting into their
usual mess and the USA philanthropically coming in to sort it all out
for them. Another is that the UK and allies such as Australia and Canada
to name only two were left alone for nearly three years on both
occasions to take the whole load of maintaining balance of power whilst
the USA remained a spectator.
Both are simplistic, but its useful to be aware that the people of
different
nations hold sincere but different opinions about the same facts -
although
sometimes the facts are not allowed them.

European forces are at present in Bosnia and Kosovo. Russia regards its
campaign in Chechnya (or whatever its called) as a police action.
British and many other nations' forces were involved in Korea and Iraq,
Australians, South Koreans and others in Viet Nam, Nigerians in a
neighbouring West African country recently, British in the Falkland
Islands. All 'policing actions'. The burden is not just carried by the
US, although she carries the major part as the biggest player.

> It's absolutely NO surprise to me that the IRA and its

> followers resist British efforts to disarm them

Its no surprise to me either. The surprise is that some of them seem to
have the good sense to actually do it.

> - I sincerely hope they NEVER fall for the BS about trading "freedom and
> self defense for

> 'security'"

> God help US, if WE are EVER so blind and stupid as to consider so fall

> for such a "trade"!

There must be limits on an individual's freedom, otherwise he will
infringe
another's freedom. The art is to optimise and compromise.
Self defence it is hoped and promised will be provided by other methods
than guns.

>

> YOU are entirely free to be as helpless before your government and

> others who would do you harm as you choose - you are NOT even SLIGHTLY

> free to force US to do the same - and THAT statement applies to ALL,

> both in and out of our nation's boundries. It took bloodshed to

> ESTABLISH that right in 1776 - and it may well be necessary to do so

> power EVER assume the citizens of this country will meekly roll over

> in the face of threats or physical abuse - we ARE willing and able to

> defend ourselvs - both as individuals AND as a nation. Don't EVER

> forget it!

My gut reaction to the story of the confiscation of equipment was one

of dismay. It certainly does not seem in keeping with the principles

of free speech and freedom of information. I admire the US freedom of

information laws very much. Also your personal determination not to be pushed around, which I share. It's just the methods for minimising oppression that we disagree on.
I hope you will take my comments as a useful reflection from an interested
external observer. What happens in the States is of interest to and affects
all of the world's peoples.

Peter, the comments regarding violent crime in the UK come from Scotland Yard's statistical pages - at least they were available a year or so ago when I last made comparisons. You are right, MANY in the UK are as shocked as YOU are when they are exposed to figures supplied by their OWN local law enforcement agency - they, and others in the world merely ASSUME that the reduced number of weapons in the UK (or ANY place where citizens are disarmed) *MUST* result in less violence, rape, muggings and similer - they are WRONG! A year or so ago when my numbers were obtained, the UK was also pretty much the world leader in car theft - ahead of the USA even, and I thought OURS was pretty outrageous!

I appreciate the apparent open-mindedness and restraint in your posted comments here - we may disagree, but need not be abusive about it.

Regards

Gary - KJ6Q

Only if you can change all human nature and behavior. Here across the pond, our Supreme Court has ruled on several occasions that the local police forces are not in place to protect any individual at all, only society as a whole. They are not at all legally responsibile for the safety of you and your family. Who then protects you, your home and family. The answer should be fairly obvious. That is the basic reason for our Seconed Amendment to the Constitution.

Self defense is a basic tenent of our culture, our religion, and our political system. Indeed, if a mandatory gun law were passed, all law abiding citizens would turn them in. Just like the IRA, our criminals would not. Then they would have an unarmed citizenry to attack. Janet Reno could create a Waco again whenever and wherever she wants too, without fear of citizen resistance. Guns are fun for hunting (I love quail hunting with my over/under 12 Ga.) but the reason for the Second Amendment has nothing to do with hunting, but our personal liberties and protection. Those that do not wish to protect themselves through gun ownership and training may do so. Many of us choose to exercise that constitutional option though. I don't see it going away anytime soon.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

589. Collins S Line FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-10 00:00:00 UTC
From: Mike Stover <Mike.Stover@attglobal.net>
Message-ID: <387a50fe_3@news1.prserv.net>
Source record: 73257

I have a CCA VG Collins S Line for sale. The package includes the
following:

- Collins 75S-3B Round Emblem Receiver with Plastic Trim Ring, Finger Hole,
Upper and Lower Filter covers, T-9 and SSB filter. S/N 17,xxx.
- Collins 32S-3 Round Emblem Transmitter with Plastic Trim Ring, Finger
Hole, modified with the addition of an SO-239 connector in place of the
normal phono plug at the RF Out connector. S/N 101,xxx
- Collins 312B-4 Round Emblem Station Console, Plastic Trim Ring.
S/N 62,xxx.
- Collins 516F-2 Round Emblem Power Supply with Plastic Trim Ring.
S/N 55,xxx
- Collins SM-1 Station Microphone.
- Original manuals for the Receiver and Transmitter. Manual copies for the
312B-4 and 516F-2.

A very nice S Line for someone that wants a good looking, functional and
complete Collins station.

Price: $3500 shipped. Station will be cleaned and aligned at time of sale.

590. FS: Fully Restored R-390A

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-10 00:00:00 UTC
From: Mike Stover <Mike.Stover@attglobal.net>
Message-ID: <387a550d_4@news1.prserv.net>
Source record: 73258

I have a Chuck Ripple restored R-390A for sale. This is an EAC contract radio S/N 5591. Front panel has been stripped and redone including new paint and lettering. Knobs have been cleaned, repainted and restriped. Digital display has been cleaned and restored to new condition. Chassis has been stripped and cleaned. Gearing and mechanicals have been restored to like new condition. All electrical modules have been cleaned, tested, updated, aligned and tweaked for optimal receiver performance. Installed in a new CY-979A/URR shock mount cabinet S/N 2,xxx.

Price: $ 1200 plus crating and shipping. Prefer pickup and will drive a reasonable distance to facilitate transfer. Located near St. Louis, MO.

591. CC-AWA Winter Swap Meet in SC

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-10 00:00:00 UTC
From: Ron <kc4yoy@pop.trellis.net>
Message-ID: <01bf5bb6$24308bc0$3c4896d0@ron>
Source record: 73259

CC-AWA Winter Swap Meet, January 29, 2000
Caughman Park, Columbia, SC.
The park opens at 8am so there's no reason to arrive early.
This is a FREE event, NO admission, NO setup fee.

Here are directions for the 29 Jan swap meet at Caughman
Road Park in Columbia, SC.

From I-77 go to exit 9 if you are coming from the south and 9A if you
are coming from the north. Either way you are at US 378/76 EAST,
also called Garners Ferry Road.

From I-26 go to exit 116 (from north or south). This is the southern
end of I-77. Go north 9 miles to exit 9 and follow directions above.

From I-20 go south on I-77 from either east or west on I-20. Go to
exit 9A and follow directions above.

At I-77 and US 378/76 there are several motels and restaurants.
Motels include:

Holiday Inn Express 803-695-1111
Days Inn 803-783-5500 or 1-800-325-2525
Hampton Inn 803-783-5410
Economy Inn 803-695-3485
Sleep Inn 803-776-6263

To get to Caughman Road Park:

Go east on US 378/76 from I-77 4.5 miles to the seventh (7th)
stoplight, including the one at I-77 and exit 9, but not the one
caution light.

Turn left on Trotter road and proceed one (1) mile. You will see the
main entrance to the park on your left. DO NOT ENTER HERE.

Go to the next street on your left (about 300 yards), which is
Caughman road and turn left. Go about 200 yards and there is a
parking lot and a large covered picnic area on your left. This is
the place.

We have this part of the park from 8 Am. until noon. DO NOT ARRIVE
BEFORE 8:00, please.

Restrooms do not open until 10:00 so lay off the coffee.

Information Carl Shirley 803-776-6850 or shirleyc@garnet.cla.sc.edu

Randall,

The only mod that is useful is to replace the bias battery with a small
solid state supply. Other wise
the AF-67 is a fine, stable TX for 160 to 10 meters. About 40 watts output
on 75 and 35W on 10 (thats 60 or so watts input).
The AF-67 is called the Viking Ranger of Mobile AM/CW TX's. I have two.

Hi

Certainly the Morse Telegraph Club qualifies as boat anchor material!

The MTC (Morse Telegraph Club) sends out an interesting newspaper four times a year. Membership includes the newspaper called Dots and Dashes. The entire years membership is ten bucks! Kind of a steal. Check it out.http://members.tripod.com/morse_telegraph_club/

Hi folks,

I have two piles of USM-207 Frequency Counter parts that I promised to a couple of folks last year. I still have the parts, but have misplaced an SASE from one fellow and lost the URLs from both. One fellow or both were from Canada. One bought a counter from me and the other fellow bought a USM-207 time base. Please refresh my failing brain so I can get this stuff in the mail.

Actually Rick, if you read the writings of Jefferson and other framers
the second admendant was to keep the Government in-line. They saw how in
Europe, if only the government had guns, then they could oppress the
people.
I believe one quote of Jefferson was :
"The foundations of freedom are built with the blood of tyrants and
patriots alike."
He fully expected for a revolution to happen every so often because he
knew that the government would eventually grow strong enough to control
by force.

This was also how history was taught 20-30 years ago before it was
rewritten to be "politically correct."

Such a law would turn many thousands of presently law-abiding citizens
into criminals. Just another victimless crime law to have to deal with.
When Australia banned guns, the hardware stores immediately sold out
of 8-10 inch PVC pipe. Wonder what all that pipe was used for?

Rick caught you on that one, Mark. The people who don't turn
in their guns would not be law abiding citizens, by definition.

JM wrote:

> Numerous studies show that states with less gun control have less
> crime.

But do not prove a cause and effect relationship. New York and D.C. have
many
other peculiar features beside gun control.

> 9000 killed out of 250 million, figure out the percentages there.

approximately ONE HUNDRED times the UK percentage.

> How many crimes have been prevented by gun owners? Lot's, you
> just never hear about it.

A lot seem to get through the net. How many are CAUSED by gun owners, or
the public acceptance of guns?

> 16,000 people(so I hear) were killed by Drunk drivers,

500 road deaths per annum in UK attributable to alcohol. Approx 1/8th
of US rate allowing for population.

> yet you can buy
> alcohol in almost every petrol station.

Not in UK AFAIK. Although you can buy matches, which is probably rather
silly.

> Those that turn their guns into
> plowshares will plow for those that don't.

I'm not advocating disarming the army, navy and air-force. I pay them to
protect me having to become a ploughman for a foreigner.
My vote, a free press and media and the good sense of my fellow citizens
hopefully protects me from home-grown domination.

> Remember WW2? American guns and firepower saved UK (so I hear) from sure > domination
from the Nazi's.

I do remember WW2. I spent many a night in an air-raid shelter in 1939,
1940, 1941, 1942.
WW2's got nothing to do with habitually carrying guns in peacetime.
BTW there is an alternative viewpoint on the war - namely that the UK by
its dogged persistence and then the USSR by its fanatical and successful
resistance saved the USA, which seemed to be a bit laggardly in getting
involved, from eventual possible Nazi/Japanese domination.

The USA sold armaments to Britain in both world wars before coming in
herself - probably many millionaires were made - but don't get me wrong,
we were truly grateful.

> At least with having a gun I may have a slight chance of protecting
> myself and others from harm,

You carrying a gun also makes it more likely HE will also carry a gun,
and he might decide to shoot me instead of you. I appreciate your
protection
but if the other guy didn't have a gun in the first place I wouldn't
need it.

> there's NOTHING I can do to protect myself
> from a Drunk driver.

Seat belts, air bags, reinforced passenger compartment,
energy absorbent front-ends, drink-driving laws, gaol,
Routine police checks, breath tests,
changing public mindset re drinking and driving.

> Trot on down to the local pub and have a Guiness
> and think about it.

A good idea!
(Guiness is Irish BTW)

> Plow on, Limey!

!

> (sorry about the off topic post, I just couldn't help it!)

Best wishes,

More involved in worrying aboud being mugged, robbed or beat up by
attackers?

> As you probably know, the police strongly resist being armed because
> they believe that
> then the criminals will become armed in response and the situation
will
> escalate.

YOU mean like in your high-security prison, the "Maze", where a year
or so ago, a couple of inmates gunned down another? Please explain
exactly HOW that happen in a "gunless society" - much LESS a top
security *prison*!

The majority of crime seems to be formalised at an implicitly
> agreed level of violence and discomfort to both sides. My
neighbour's
> rather disturbed 15 yr old son might scribble minor abuse in the ice
on
> my car windscreen, but I feel reasonably secure that he won't shoot
me.
> Using a gun means stepping outside the norms into dangerous
territory -
> and so
> is relatively rare.

A pity your robberies, muggings and similar incidents (at greater
frequency per capita then that of the USA) aren't NEARLY as "rare"!
Could it be because your criminals KNOW it's highly unlikely their
English victims will resist - by force of arms or otherwise?

>
> However, once a norm where guns are carried as an everyday habit has
> become established, I can see that it will be very difficult to
alter,
> since neither side wants to disarm first.

You mean like your own government's experience with the IRA? Possibly more in THIS country would be more inclined to less gun ownership - IF we could disarm criminals and politicians FIRST! Sometimes it's REAL hard to tell one from the other...

> Perhaps you might agree that as a long-term goal, eventual
disarmament
> of
> everybody, in every community or nation might be a worth-while aim?
> (I hope this has not come over as anti your great country, because
my
> attitude is quite the reverse. If the USA did not exist, the world
would
> have to invent it.)

YOU mean so *our* armed young men and women can play "police force for the world", and continue to be relied upon to travel the world when needed at the expense of OUR taxpayers, to offer up THEIR lives if required, to defend the "sheeple" of far away countries who DID permit themselves to be disarmed by their governments. "for their own safety and security" - even as YOUR country was and did before your war with Germany. It's absolutely NO surprise to me that the IRA and its followers resist British efforts to disarm them - I sincerely hope they NEVER fall for the BS about trading "freedom and self defense for 'security'"

God help US, if WE are EVER so blind and stupid as to consider so fall for such a "trade"!

YOU are entirely free to be as helpless before your government and others who would do you harm as you choose - you are NOT even SLIGHTLY free to force US to do the same - and THAT statement applies to ALL, both in and out of our nation's boundries. It took bloodshed to ESTABLISH that right in 1776 - and it may well be necessary to do so again under similar circumstances - let NO criminal, tyrant or foreign power EVER assume the citizens of this country will meekly roll over in the face of threats or physical abuse - we ARE willing and able to defend ourselvs - both as individuals AND as a nation. Don't EVER forget it!

Hi,
I have for sale a Collins KWM-2 s/n 11140. This is a winged unit. The setup includes; 516f-2 power supply, 312b-3 speaker enclosure, Waters rejection notch unit, as well as the original manual. I will also include an E-V 729 mic. that is wired to work with the KWM-2. The equipment is in excellent cosmetic and electrical condition. The power supply has new electrolytic caps installed. All the knobs, paint etc. are original. The manual does have a coffee stain on a couple of pages, but that's the only negative I can find. Price is $700 plus shipping. I will box this in 3 boxes. Thanks, 73 Gary

Study the psychological profiles of robbers who break and enter
a dwelling *known to be occupied* and then get back to us. They
aren't after your silverware. They are out to get their kicks.

Last chance before it goes on E-Bay.

Station consists of:

Collins 75S-3B Round Emblem receiver with plastic trim rings, upper and lower filter covers and T-9. S/N is 17xxx. CCA very good condition.

Collins 32S-3 Round Emblem transmitter with plastic trim rings and SO-239 UHF connector on rear panel. S/N is 101xxx. CCA very good excluding modified RF connector.

Collins 312B-4 Round Emblem station console with plastic trim rings. CCA very good condition. S/N 55xxx

Collins 516F-2 Round Emblem power supply with plastic trim rings. CCA very good condition. S/N 62xxx.

Collins SM-1 Dynamic Mic. Original with coiled cord and Collins plug. CCA very good.

Original manuals for the receiver and transmitter. Manual copies for the console and power supply.

Station is going to technician this week for cleaning and alignment. All cabinets are in vg condition with no dents. All front panels are vg with no marks or scratches. All knobs will be polished and inserted before shipping. Trims rings are Collins manufactured plastic and vg.

Price: $3300 plus shipping from 63033. Pick up preferred and I will drive a reasonable distance from St. Louis to help that happen.

Please accept this as the courtesy note it is meant to be.

Most users of these newsgroups have agreed on the following
standards when posting sale or auction listings:

Please preface any auction posting with "FA:"
i.e. "FA: National HRO Coil."

Please preface any direct sale posting with "FS:"
i.e. "FS: Drake TR-4."

This allows those users who do not wish to see auction
postings to set their filters and thus, not see them.

Thank you very much for your help with this.

649. "ARC-5" and Other WWII Military Nomenclature Systems

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-11 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <387ACC5B.86A7E47B@ix.netcom.com>
Source record: 73196

(A gentleman kindly asked for this information.
Copied to the lists in hopes it may be useful.)

> I know that ARC means Aircraft Radio Corp
Actually, "ARC" as in "ARC-5" comes from the
mid-WWII JAN classification system for comm gear.
See below.

> My understanding is that Command Sets were referred to
> as both the ARC5
> system and the SCR274 system.
> The navy used a CBY nomenclature....
> and SCR is Signal Corps Radio....

The Army and the Navy used different systems for
radio nomenclature all the way back to WWI.
The origin of the Army designation "SCR-xxx" is uncertain,
but has been used to designate U.S. Army
radio systems since at least 1916 or '17.
The major componants that make up an "SCR-xxx" radio set
are assigned a "BC-xxx" number.
The "BC-" number signifies a "Basic Component."
Thus, an "SCR-xxx" radio set is made up
of "BC-xxx" basic components.

Accessories such as mounts, shocks, bags, boxes etc.,
usually had nomenclatures that didn't "fit" as neatly
as the "BC" system for the major componants.
A carrying bag for the SCR-131 antenna was a BG-49,
not a "BC-xxx," and the mounting racks and shock mounts
for SCR-274N are designated "FT-xxx."
It wouldn't be so bad if all the sub-designations had
been consistant. Some were- most Army shock mounts
are designated "FT-xxx"- but many were not.
For example- A canvas radio cover might be "BG-xx" (bag)
for one radio set and "CS-xxx" (case) for some other set.
So system engineers had to open their TM 11-486
and TM 11-487 in hopes of keeping it all straight.

At the beginning of WW-II,
the Navy system was a little better, but not by much.
Radio set models were designated with three-letter nomenclatures.
Under that nomenclature, individual components
were designated with a three- or four-letter code
assigned to a particular manufacturer,

followed by a number designator for
that specific component of the set.

For example- consider the famous TCS.
The entire radio set was designated
model "TCS" by the Navy. The transmitter-
if made by, say, Collins- would be a "COL-52245."
"COL" means that Collins made it and "52245" is
the Navy designation for that design of transmitter.
Were the same transmitter made by Hamilton Radio,
it would be a "CHL-52245," and would still be
designated part of model "TCS."
"CBY" would mean the radio was built by Aircraft Radio Corp.
"CCT" would be Stromberg Carlson. There are many more.

The earliest production Command Sets (1940) that people call "ARC-5"
were purchased for the Navy as model ATA (the transmitter parts)
and model ARA (the receiver parts)
(why they seperated them in this case is a story in itself).
If you look on the tag of one of these transmitters
(a blue tag on the top cover),
you will see "A UNIT OF MODEL ATA EQUIPMENT" between two horizontal
lines.
A 3-4 MC ATA transmitter made by Aircraft Radio Corp
would thus be designated "CBY-52208, a unit of model ATA."
One made by Stromberg Carlson would be
"CCT-52208, a unit of model ATA."

About mid-WWII, the production poo-bahs got tired
of the inter service rivalry and produced the
"JAN," or "Joint, Army/Navy" system. System nomenclatures
began with "AN/" (Army-Navy/), a three-letter designator that
actually described what the set was supposed to do- i.e.
(A)ircraft (R)adio (C)ommunications- and a model number.
Some examples:
AN/ART-13 = Aircraft Radio Transmitter model 13.
AN/APR-4 = Aircraft Radar Receiver model 4.
AN/GRC-9 = Ground Radio Communications model 9.

Individual pieces within the radio model
where designated Component/Model Number;
a 3-6 MC receiver for radio model AN/ARC-5
is designated "R-26/ARC-5."
The "Component" part of this was also defined.
Some examples:
R= receiver.
T= transmitter.
MD= modulator.
MT= mount.
DY= dynamotor.
C= control box.

An updated form of this JAN system is still in use today.

The Navy was stubborn about its manufacturer codes
and kept them on the gear. You see them
just after the serial numbers on AN/ARC-5
components (i.e. serial number "1234 CBY").

The Army was also stubborn and stuck to
their SCR systems, although by war's end
JAN had made big inroads and is standard now.
It's interesting to note that while
AN/ARC-1, AN/APT-5, AN/ARC-3 and other JAN
units might be found in an Army B-24 in 1945,
I have never seen an installation
of AN/ARC-5 in an Army aircraft documented.
They had plenty of SCR-274 sets to go around.
I do have a T-19/ARC-5 transmitter with both
Navy and Army inspection stamps, but I believe
this to be an "oddball" and is the only
such example of which I am aware.

> If the Command Set was used for aircraft to aircraft communications
> why would there be two names for the same system?
The Navy bought the system first in 1940, designating it ATA/ARA.
The Army wouldn't buy it because the Navy liked it.
In 1941, a new Signal Corps commander told them to can that nonsense
and forced the Army to buy and use the set.
The Army designated the set SCR-274N (N for Navy).
Except for inspection markings and nomenclature plates,
these sets are identical (not counting the 2nd and 3rd generation
ATA transmitters, which have some minor mechanical differences).
The AN/ARC-5 (1943) is a later, improved version of these early sets
with several electrical and mechanical differences.

> Since there was no USAF until 1948,...the Army operated all
> military aircraft.
The Army had the largest air arm, known as the U.S. Army Air Corps
(USAAC)
and later as the U.S. Army Air Force (USAAF). The Navy had
it's own air service, as did the Coast Guard.

> May I assume that the Signal Corps was common to both
> the army and the air arm thus procuring equipment for both?
The Army Signal Corps did procure equipment for all
branches of the Army.

> This came up because someone asked me where the R-26/ARC5 was used.
Navy aircraft of every description from 1943 to about 1955,
and in foreign services, even longer.

> Also, do you have a cross reference chart relating BC-XXX to R-xx/T-xx
> to CBY numbers for the Command Set family? I would like to post that on

> my Web page.
I believe this is available on the boatanchors archives
at www.theporch.com in the FTP section. If not, get back to me
and I'll see if I can find it.

Hope all this helps!
Additions/corrections welcome and/or argued over.

Happens that I also have a Y-600 Trans-Oceanic with white paint splatters, though they seem too well-attached to pop off. I had pretty decent luck just hitting them with the pointed tip of a black Smoothie, simply coloring them black. Amazingly, they are nearly unnoticeable.

It isn't the first time I've covered nicks, scratches, and rub marks on black equipment with black permanent markers. I just wish they came in other common cabinet colors--brown, for example.

PVC of that diameter might make for a decent single-use launch tube for a respectable anti-armor missile. Now if your'e talking about 1/2" diameter, 10 inch long PVC, then Cecil, I think I'm at a loss for a good use for that. Maybe a very short bong?

Could any other factors be at work also? My recollection is that most of the states with minimal gun control are also have the smallest populations, largest area and therefore lowest poplation density, and are the most homogeneous socially. Something to consider. . .

In my home county in East Texas, if the population were spaced equi-
distant from each other, nobody would be able to hit anybody else
with a gunshot. :-)

668. KW2000A power lead?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-11 00:00:00 UTC
From: Andy Cowley <andy@btc.uwe.ac.uk>
Message-ID: <387B6475.41C67EA6@btc.uwe.ac.uk>
Source record: 73215
Cross-posted to: uk.radio.amateur,rec.radio.amateur.boatanchors

I've just acquired a 12 volt power supply for my KW2000.
Unfortunately there is no lead or documentation 8-<.
The PSU was made by Avel for KW Electronics. It has
a 15 way Painton connector. Does anyone know :-

Where I can get a Painton plug? (not very hopeful on this)
It _is_ a Painton (not Paignton) connector - I found a
picture of one in an old Wireless World and it looks right.

What the various pins are?

or (even better) where I can get a lead?

The connector looks like this

{ - - - - - - - - }
{ x - - - - - - - } <- latch springs

The x is a blanked hole to key the whole thing. Somebody
sprayed the whole PSU blue without taking the cover off
so the inside is a uniform dirty blue making wire tracing
a little difficult. It has 4 x 2N5155 on a heatsink on the
outside, the Painton connector, 12 volts in and a high/low
power switch. I can't test it as it has a connection to
the frontpanel switch somewhere, which fires the relay
for the main 12 volt supply. If anyone has any
documentation for it I would be eternally greatfull(sp?).
There is no panic for this as I haven't got my spotty up
to 12 wpm yet and I do have a 240v supply.

Thanks in advance

Andy Cowley, M1EBV qth Bristol, England

p.s. If anyone has a KW1000 for sale I'm interested. (It's a linear)

This is not an uncommon tactic/argument used by anti-gunners - the claim that "other factors are at work" when the fact that all types of crime are statistically reduced where gun laws are less strict...

It just ain't so!

PLUS, it has been REPEATEDLY shown to be true in cities/states/nations, that an UNarmed society is a sitting duck for abuse by criminals and politicians both inside and outside their own nation - which may well be ONE reason some here in the USA resist actions by NATO and the UN to extend their gun bans to THIS country - *I* sure wouldn't want to see Bosnia or Chechynia repeated here on US soil, at least NOT while *I* am disarmed!

<andy@btc.uwe.ac.uk> writes

Hello Andy

This may be of assistance to you.

I myself am running twenty five year old seperates from KW.

Your 2000a I seem to remember is the TRANSCEIVER model

Well, to cut a long story sideways Andy,

across the years when I had a breakdown I would ring a very great guy
named Chris Ridley, he was the KW short wave engineer.
without fail, Chris ALWAYS on the phone got me out of trouble explaining
what I needed to do to keep my rigs going.

Then Chris left when KW Folded BUT BUT BUT they gave me his new address

He was then with ICON and as they have a Canterbury number, I have
just phoned them.

ICON answered, (ie.Answerphonewise)

SO

Icon will of course know Chris (if he has not long ago retired)

If you ring them during the daytime and ASK for Chris, you may be able
to take your problem to him whom WILL surely help you Andy.

The phone number is 01227 741555

I wish you the very best of luck.

--> Of course, what we know now is that the U.S.'s armed revolution was
very much an unusal one. Most of the time, an armed revolution results
in a military dictatorship, and it could have easily happened that way
here. We were very fortunate that that wasn't the goal of the leaders
of our revolution.

No matter how you feel about gun laws and the 2nd Amendment, you have to
admit that the armed forces are so far ahead of civilian weaponry that
it'd be hard for civilians to make and sort of credible resistance to
a serious government attack. (As far as Chechynia, I wasn't aware any
of our states were seriously considering secession. A few counties in
Texas, yeah, but I don't think anyone's taking them seriously.)

If you actually knew the odds, you'd know you're wrong. Professor
Gary Keck (a criminologist who does not have a pro-gunner agenda,
but who is an honest researcher nonetheless) did a study of the FBI
uniform crime reports and found that those who do not resist a criminal
assault were more likely to be seriously injured or killed than those who
do resist.

He also found that the more effective means of resistance a victim had,
the better his odds of escaping without injury. Those who were able to
resist with a firearm were 5 times less likely to be injured than those who
did not possess a firearm.

Street cops understand this implicitly, which is why they are always
armed. The rate of injury or death for the cop on the beat is lower than
for a number of other occupations, including construction workers,
miners, and farmers. Yet the cop has to go head to head with criminals
every day. If carrying a firearm didn't improve his odds of survival,
he wouldn't carry one.

Impeckable (sic) logic as usual, Gary. Now if we could only talk
the general public into training to a certain degree like cops
train.

(Ever seen anyone use 'sic' on his own word before? :-)

Just as it is a common argument that other factors than guns contribute
to violence. Same argument really, it is just what you focus on, what
concerns you most, guns or violence.

I found, (by accident...) that latex paint can be
easily removed with ammonia. Just a little in a spray bottle,
get it a the grocery store in the cleaner isle, does the
trick. Also does a good job on cleaning the finish. Check
to see if it removes the finish or lettering on a place that
is not obvious, just in case it removes all of the finish.

Take Care,

Also, don't forget the Soviet Union during the cold war. The US had superior weaponary over the Soviets by far. But, the Soviets had more numerically than we did in a lot of areas. For example, the philosophy of the US was to have one Fighter take out multiple Soviet fighters. The problem was, the Russians had a heck of a lot of less advanced fighters to contend with.

While one should not sluff of a superior weapon, one also has to respect the Mongolian Hord aspect also.

Finally, I'd like to think that our armed forces would think twice about firing on their own citizens, at least to a degree to thwart such an attack.

Of course the UN could step in and "help" matters....Anyone remember the mini-series that aired on TV in the mid 1980 called "Amerika"?

Why? Most armed robbers who enter a dwelling known to be occupied
are ready and willing to rape, torture, and murder.

It's hard to comprehend that Jefferson and his contemporaries could have possessed such clear and accurate foresight - they have quite accurately prepared the "cure" via the Constitution and Bill of Rights for what our nation has slowly, steadily degraded to... Pity is, I'm doubt we enough citizens in our society at present with the courage and sense of outrage towards our current "representation" to make use of what we have been provided at so great a cost...

That's true Cecil, but this isn't about sporting goods. The primary purpose of a gun is power. (Mao astutely noted that all power flows from the barrel of a gun.) It empowers a person beyond his own physical strength. This allows him to more effectively deter evil, and forcibly resist evil if necessary.

As has been abundantly documented, killing is usually not the result of employing this tool. Most shootings are not fatal, and most uses of a gun don't involve anyone getting shot. Guns have a deterrent value many times that of mere applications of lethal force. The threat of force is often sufficient to end aggression. According to Gary Keck, this happens over 2 million times a year in the US.

The downside is that power is amoral. It can work against us as well as for us. How we choose to exercise it is where morality enters the picture. The gun is just a tool, how we choose to use it determines whether it is a tool for good or evil. Being denied that choice would truly be evil of the worst kind. It would be a premeditated license for the strong to prey on the weak. Simply stated, free men are armed, slaves aren't.

This is just for the those that would like to take the means of protection (Guns) away from us law abiding citizens.

On Thursday, May 27, 1999, Darrell Scott, the father of Rachel Scott, a victim of the Columbine High School shootings in Littleton, Colorado,was invited to address the House Judiciary Committee's subcommittee.

What he said to our national leaders during this special session of Congress was painfully truthful.

It needs to be heard by every parent, every teacher, every politician, every sociologist, every psychologist, and every so-called expert!

These courageous words spoken by Darrell Scott are powerful, penetrating, and deeply personal. There is no doubt that God sent this man as a voice crying in the wilderness.

The following is a portion of the transcript:

"Since the dawn of creation there has been both good and evil in the heart of men and women. We all contain the seeds of kindness or the seeds of violence. The death of my wonderful daughter, Rachel Joy Scott, and the deaths of that heroic teacher, and the other eleven children who died must not be in vain. Their blood cries out for answers.

The first recorded act of violence was when Cain slew his brother Abel out in the field. The villain was not the club he used. Neither was it the NCA, the National Club Association. The true killer was Cain, and the reason for the murder could only be found in Cain's heart.

"In the days that followed the Columbine tragedy, I was amazed at how quickly fingers began to be pointed at groups such as the NRA. I am not a member of the NRA. I am not a hunter. I do not even own a gun. I am not here to represent or defend the NRA - because I don't believe that they are responsible for my daughter's death. Therefore I do not believe that they need to be defended. If I believed they had anything to do with Rachel's murder I would be their strongest opponent. I am here today to declare that Columbine was not just a tragedy - it was a spiritual event that should be forcing us to look at where the real blame lies!

Much of the blame lies here in this room. Much of the blame lies behind the pointing fingers of the accusers themselves.

"I wrote a poem just four nights ago that expresses my feelings best. This was written before I knew I would be speaking here today.

"Your laws ignore our deepest needs
Your words are empty air
You've stripped away our heritage
You've outlawed simple prayer
Now gunshots fill our classrooms
And precious children die
You seek for answers everywhere
And ask the question "Why"
You regulate restrictive laws
Through legislative creed
And yet you fail to understand
That God is what we need!

"Men and women are three-part beings. We all consist of body, soul, and spirit. When we refuse to acknowledge a third part of our make-up, we create a void that allows evil, prejudice, and hatred to rush in and wreck havoc. Spiritual influences were present within our educational systems for most of our nation's history. Many of our major colleges began as theological seminaries. This is a historical fact.

What has happened to us as a nation?

"We have refused to honor God, and in doing so, we open the doors to hatred and violence. And when something as terrible as Columbine's tragedy occurs - politicians immediately look for a scapegoat such as the NRA. They immediately seek to pass more restrictive laws that contribute to erode away our personal and private liberties.

"We do not need more restrictive laws. Eric and Dylan would not have been stopped by metal detectors. No amount of gun laws can stop someone who spends months planning this type of massacre. The real villain lies within our own hearts. Political posturing and restrictive legislation are not the answers. The young people of our nation hold the key. There is a spiritual awakening taking place that will not be squelched!

"We do not need more religion! We do not need more gaudy television evangelists spewing out verbal religious garbage. We do not need more million dollar church buildings built while people with basic needs are being ignored. We do need a change of heart and a humble acknowledgment that this nation was founded on the principle of simple trust in God!

"As my son Craig lay under that table in the school library and saw his two friends murdered before his very eyes - He did not hesitate to pray in school. I defy any law or politician to deny him that right! I challenge every young person in America, and around the world, to realize that on April 20, 1999, at Columbine High School -prayer was brought back to our schools."

"Do not let the many prayers offered by those students be in vain. Dare to move into the new millennium with a sacred disregard for legislation that violates your God - given right to communicate with Him.

To those of you who would point your finger at the NRA - I give to you a sincere challenge. Dare to examine your own heart before casting the first stone!

"My daughters death will not be in vain. "The young people of this country will not allow that to happen!"

David:
Thanks for the information. I had just found these groups in
December. I had been seeing FS and other letters ahead of listings and
was trying to figure out what they ment such as WTB, WTD and most of
them I could figure out. Sorry for any inconvienence to others in the
group.

Jack

Criminals usually have mental problems. Not resisting often
gives them power and courage to go farther than they would
otherwise. I'm reminded of the 75 year old lady who fought
off her attacker with a hat pin.

England has a gun sub-culture. They are called criminals. One
was interviewed on a recent TV special about security in England.
He said, in England, any criminal who wants a gun can get a gun.
He showed his handgun to the cameraman and said he loved England's
gun laws.

You *DO* live in a dream world, don't you!

Ask the patients admitted to local emergency rooms with knife, gun and fist wounds what THEY think - and THEN tell us how this is a "media invention" Your claim that all this was happening right along, but merely unreported comes from where? Do you have a source, or merely posting an OPINION as "fact"?

Would you similarly claim current shootings are ALSO "media inventions" - or does that not meet your personal agenda and predjudice in this instance?

Guns, of themselves are NOT "violent"...
Autos, of themselves are NOT "violent"...

THeir owner/operators MAY be - WHICH do YOU think will respond best to appropriate attention - the PERSON, or the mechanical device? OR, are YOU one of those suggesting massive controls and bans over 99.9% of society in the guise of "controlling" the .1% who are the real offenders?

Hi,
I am a collector of Collins and Drake equipment. I have over 300 pieces at present and are still needing more,
I am in England , however I transfer money world-wide and also arrange collection.
It does not matter if the sets are working or not.
I prefer MINT and UNMARKED line-ups.
I also collect JRC and anything else that is interesting.
If you have something for sale please e mail me at sales@multicomm2000.com
I can also arrange to transfer money in to a credit card account if required.
All I ask of you is to make sure that the units are cartoned up for safe transit.
Please e mail me with any equipment you have
Thank you
Martyn

I'm member at a local radio historic society (www.nrhf.no), and very
often items are offered in very bad shape. Too often I wonder what
sort of collectors we have. An ex-German receiver (T8K39 Schwabenland)
was offered at recent auction at minimum price of $1500, but the fool
did not care to do any sort of maintenance, not even used lubricating
oil on the drives, so some controls could hardly be moved

Perhaps they are just some sort of persons believing in profit and
store the equipment in the barn???

> posting an OPINION as "fact"?
> Would you similarly claim current shootings are ALSO "media
> inventions" - or does that not meet your personal agenda and
> predjudice in this instance?

--> I was talking about road rage, not school shootings or whatever else you think I was discussing. It's nothing new. You heard occasional reports about traffic shootings, people driving aggressively, etc. long before anyone coined the term 'road rage.' It's just that FOX can't make a special about it until there's a buzzword to use as a title. So now stuff goes national that used to only make the local news. People were being admitted to local emergency rooms with knife, fist, and gunshot wounds long before all the fuss over "road rage" started. Yeah, our society is violent, but I'm not convinced it was any less violent in the past. News just travels better now. (And in the past traffic shootings were almost exclusively assumed to be gang-related by the media, as well.)

> Guns, of themselves are NOT "violent"...
> Autos, of themselves are NOT "violent"...

--> Tell me where in my short post I disagreed with the above? There *is* a difference, though. The only purpose of a gun is to kill. Cars also provide transportation. Guns are designed to kill as easily as possible; cars are designed with safety features to attempt to make them less lethal. So a comparison between the two can only go so far.

Incidentally, I agree with you that the root cause of Columbine has *nothing* to do with guns, and that gun laws would have done little to stop it. The root causes of the Columbine shooting have more to do with the way our high schools are run and the anti-education, pro-sports slant of our society.

That's not true. The other purpose is having fun visiting the
local firing range and punching holes in targets. Remember,
shooting guns is an olympic sport. Nobody killed there.

I swore I wouldn't get involved with this post when I first saw it, because I am not a gun or a non-gun person, either way, and I also don't see where ANY of the gun issue stuff is related to amateur radio. In fact, it is not. But I will take long enough to say:

When I lived in NE New York, we often had occasion to go to Vermont. Vermont, at the time (and still may be) was a Right-To-Carry state. Most of rural Vermont is truly deep wood communities with its share of one-general-store-and-a-gas-pump towns. I can't count how many times, as a teen ager running around "the hills," we would invariably stop at one of these places, walk in and see a whole range of armed men and women in these places. Guns in holsters on hips, rifles slung over the shoulder with straps, etc., etc. Even the first time I ever saw this I was never taken one way or the other with it.

Looking back now, I believe the reason I was never reactionary to it was because I probably figured it was THE safest place to be! One would have had to have been a fool to a) try to rob the place or anyone else; or, b) get crazy with a rifle or gun because there was lots of others there ready and capable of responding.

My point is that to use the argument that "guns kill," etc., why would there be this situation in Vermont? Everyone in those places was always just as friendly as could be and there was no conscious "I have a gun" attitudes. Then, to use the argument that if you lose your guns, our government will make peasants of us...well, anyone need only really think about the shape of life today in the United States. If you think for one minute the US Govt. needs guns to "take over us" you are living in a dream world...it's already happened.

I remember once when a Vietnam Vet, back in the country only a couple of months, mentioned that he would love to go back. I was shocked--and even more awoke when he said to my question of why, that at least "over there he knew who the enemy was."

Just my thoughts....

Kim

Florida, one of the first to enact right-to-carry, is mostly rural??
With Miami, Orlando, Tamba Bay, etc...
And this is where the first evidence of criminals staying away from
might-be armed citizens proved itself.
Remember sveral years ago it was alli n the press when European tourists
where getting robbed and killed after leaving the Floridsa airports and
the press and anti-gun were screaming. Then they discovered that the
reason was after Fla. passed the right-to-carry law that that
slender,weak looking young AMERICAN CITIZEN women might have a 9mm in
her purse. But, not a out-of-country tourist, nope they were unarmed.
So, stake out the rental car agencies, follow one, jump them when they
stop at a light with your gun. No worry about getting shot by them. Do
as you please. When the main stream press discovered this was the
reason, they dropped the coverage because it proved that criminals
AVOIDED any confrontation that they didn't have all of the odds in their
favor.

Remember the time period too. The US goverment did not really maintain a large standing army, mainly a Navy. They relied on the militias that the states raised in time of war. This carried through till after the Civil War. You know the 4th Mass. the 3rd Maine, etc... That were under the command of the central goverment. Plus, at the time of the Constitution framing, most citizen soldiers supplied their own firearms. So the firepower was kind of equal.
We must also remember when arguing then and now, that then our country was based on a agrairian(sp?) society. None could forsee the industrial revolution and the tremendous immigration of the late 19th and early 20th centuries.

What now, permits and waiting periods for Louiville Sluggers???
As long as people wish to do harm to others, it will happen. I know the
argument is the gun makes it easier, and it does. But, I plan to hang on
to mine as long as I feel I need to because the police damn sure can't
protect me or my family. And the law is a not a deterrent. Hell, a good
lawer telling of his bad childhood and shrinks saying its not his fault,
and he out. A guy killed in cold blood, for the fun of it (his own
words), an 18 year female clerk in a robbery, he admitted it and was
sentenced to death. He stopped all appeals. That was over fifteen years
ago and he is still alive thanks to the American Civil Liberities Union
filing on his behalf.
Guns are only for killing? To me going out to the range and shooting a
1/2" group at 200 yards is the same as a hole-in-one to a golfer.
Anti-education pro-sports a reason for Columbine, I personally doubt it.
How about two spoiled brats who our education system taught your
personal failures are not your's, but somebody elses fault. If I
remember correctly they asked who believed in God, and when a girl said
"I do" they shot her. Can't blame a "pro-Christian" education system for
that, we took God out of the schools long before school shootings and
the such. Hmmm, I wonder????

Message-ID: <Rpaf4.142$ze4.21073@typhoon-la.pbi.net>
Source record: 73137

Subject: OEM "T" power connectors and Anderson Powerpoles

I have started a new web site to sell the hard to find and "elusive"
Anderson Powerpole connectors that have become (or are becoming) the most
popular power connector for interchangeability in the emergency community
along with Yaesu, Kenwood and Icom mobile OEM "T" power connectors.

www.powerwerx.com was started with hearing the concerns of hams across
the country in newsgroups of "where to purchase these connectors" and other
"hard to find" products at reasonable prices.

PowerWerx.com encourages groups to pool their purchases to obtain a very low
price on power connectors.

I apologize for the commercial promotion, but I feel that an on-line secure
source for these products has not been available for quite some time.

We accept MasterCard/Visa.

The philosophy of "one ham helping another" is now extended from my web site
to you.

Ken, KM6YH
www.powerwerx.com

History is FULL of examples of despotic governments being overthrown by their "peasant" societies with ROCKS and PITCHFORKS! That, in spite of the "better armed" forces of the governments being challenged!

Tell me exactly HOW all that fancy arillery, planes and laser bombs will attack and remove resisting groups immersed and hidden within populated areas like New York and Los Angeles? Why do those using your weak argument always ASSUME a resistance group MUST do so from an isolated and exposed position? Even OUR forefathers abandoned the "volley" method of military encounters common in early times in favor of the far more successful hidden method used by indians.

That method STILL works in places like Ireland and Afganistan... As it did in Korea and Vietnam... WHO won those "wars"? It CERTAINLY wasn't *US*, in SPITE of our "superior weaponry"!

>KD7BFX

Examine this:

Violent people KILL with knives.
Violent people KILL with clubs.
Violent people KILL with automobiles.
Violent people KILL with fists.
Etc., Etc!

WHAT is the SINGLE constant above? *VIOLENT PEOPLE!*

Work to REMOVE or modify the BEHAVIOR of those violent people, and the guns, fists, cars and clubs CEASE to be a problem in and of themselves JUST as they were in previous years! Guns were common in homes and pickup trucks during my youth in the 40's and 50's - and shootings were unheard of - WHAT has happened? Have guns themselves become more "vicious" in recent years?

Similarly, "road rage" was unheard of in those earlier years - have our roads and CARS become more "vicious" in recent years? should we seek heavier controls/bans on THEM TOO? TOO many "experts" are so hung up treating the "symptom", that they completely overlook or ignore the basic ILLNESS - treat and correct THAT, and the SYMPTOMS will take care of themselves!

But it's just not as easy as the warm and fuzzy feeling of just passing a quick new law, is it...

OH - here's a final one for you: IF absense of nasty GUNS is key to safety and security of a populace, then our PRISONS *must* be the safest places around - right or wrong? Would YOU want to move into one for the "safety" it provides you and yours?

I didn't THINK so...

Why, Jeff, are you telling us the FCC exaggerated their flat-out "Morse is almost dead" statements in the move toward a no-theory license ?

You mean the same way the FDA tells us the drugs they approve are flat-out safe when those in the know realize that's a lie too ?

Hmm, a government that lies and exaggerates to further the agenda of special interests at the expense of the individual's wishes, which are summarily dismissed in favor of government by Gallup poll.

I'm shocked. I'm writing my Congressman and "my" (Your) League.

Kissenger would sometimes play the "good cop, bad cop" routine with the
North Vietnamese, saying something to the effect that if the North didn't
follow through with an asked-for concession, his boss, Nixon, might drop
a nuclear device on Hanoi. You have to admit that we did not use our
superpower's super power on the North; if we had, the war would have
ended in an instant.

Jeff

Source record: 73169

Hello,
Name here is Joe (N3IBX) and I have a National HRO 5-T coupled (kind of)
to a GE power supply. I have no manual for the HRO or the GE supply. Most of
the wires are connected to the supply and a few aren't. Rather than play hit or
miss,would anyone out there have a schematic that would show the wiring color
codes or voltages to the 5-T? I can figure the power supply out but don't know
what connects to the receiver.Any assistance will be greatly appreciated.
Thank You for reading this message and 73.

At about the same time , mid-late '65, I was in Coronado CA as an ETSN. Another guy (Ike Gregor?)and I got stuck with working up an 'MRC van' which meant inventory of on board radio gear then making it go. The truck was a WWII or Korean War 6X6 with ragtop cab, portable mast/tower, wire skyhooks a grunch, and a radio box on back. Outside was many coats of yellow paint , as in way thick over and over and peeling like book pages, but the radio stuff smelled like a new car. There was the first ARC-2 I ever saw which scared the crap out of me when I powered it up..Damn Collins Autotune! A couple of BC-348s (didn't know that at the time) The HF TX was a big black crackel jobbie centered behind the cab that I wish I could remember which tuned from the mid BC band to the teens of HF. I still can't remember what it was but it was a truck mounted older shipboard set not a 610 or 368. I'm 6ft even tall and it was just a touch shorter than me with a window to see the PA tubes. UHF was two TEDS with two REDS/URR35 being the modern stuff and an ARC-27. They had a URT-7 too thats a VHF version of the TED with the like receiver..can't remember that either for sure(URR-27??) There could have been an ARC-1 also but too many years. The truck was supposed to be a portable control tower / comm unit for an air strip. We got it all going then Chief signed off on it . The thing was sent to North Island transportation division for a new green paint job then it went to Vietnam. That old stuff was still on line! Not much later yours' truly was active with a TCS. That wasn't new at the time either but damn sure a tribute to old mister Collins. I'd put money on WWII radio gear being used until 1970 in support units. Gary KM6A, RMC ret, was using RBS receivers in the early '60s and ran a 'Nam CW boat net in the late '60s on a TCS. My last personal in service TCS contact (RS38 carbon mike not CW) was in Spring '68. The big cut off was the change to SSB, if not for that some old gear would have lasted much longer...my opinion only, but that old stuff was still working when it went over the side.

As the old Chief said..Stay low..move fast...check six.

You can hypothesize all you want, but it doesn't change the DOJ
numbers. Facts are facts whether they fit your preconceptions or
not.

>the general public into training to a certain degree like cops
>train.

Lord help us, no! I spent some time as a firearms instructor
for a couple of local departments. You don't want to know how
badly I found most cops were trained, what totally unrealistic ideas
they had about their abilities with firearms, etc. A hard example,
local cop squares off with perp at a range of 10 feet, 23 rounds are
fired, no one is hit, perp gets away while cop fumbles for another
magazine.

A *few* departments have really good training, but most are on
the level of Barney Fife and need to keep their one issued bullet
safely in their shirt pockets.

I tried to beat into their thick skulls that it doesn't matter how
fast you can miss. Only hits count. I also demonstrated for them
that a shotgun doesn't give a 12 foot pattern at 10 feet. You have
to *aim* the damn thing if you want to hit something with it. I
also did a demonstration to show them that their vests didn't
make them Superman. A couple of paintballs between the
eyes does wonders.

We did a lot of training with paintball guns. Before I came, all
they'd done was formal target practice twice a year. That's
totally insufficient. I instituted once a week live ammo range
time, and twice a year intensive "war games" with the paintball
guns. Anyone who doesn't practice regularly with a handgun
is a danger to himself and others.

I made them *run* a hundred yards to the firing line, then
shoot for record. That simulates the level of adrenaline you
have in a real fight. If you can't consistently put all rounds
on target under that condition, you're not ready for a gunfight.

I did do some good. I ran my guys through enough drills that
most of them learned to keep their finger outside the trigger
guard until they'd acquired a hard target in their sights. I didn't

tolerate *any* misses. I told them if you don't know *exactly*
where that bullet is going to go, you don't shoot. Etc. They
weren't Matt Dillons when they left the first course, but at
least they were less likely to shoot themselves or some
innocent bystander.

(BTW I've trained so hard on having a hard target in
the sights before shooting that I found I literally couldn't
pull the triggers when I tried to shoot two guns at once.
I couldn't see both sets of sights at the same time, and
I literally couldn't shoot at all. *That's* the level of training
you need.)

I tried to get across to them that their most valuable skill
was situational awareness. They *had* to know what was
going on around them at all times. (I bopped several of them
on the head with a rolled newspaper to show them they
weren't paying attention as we went through building
clearing drills.)

On the range, I taught them the Zambezi drill, "Two to the
chest, one to the head, makes the perp dead dead dead."
I warned them I was going to count the brass, and I damn
sure didn't want to find 23 empties on the ground and
no blood the next time they had a shootout.

They didn't like me much, but I may have saved the lives
of some of them, and maybe of some innocent civilians
too.

There are some very good defensive gunfighting courses
available to civilians. (Civies need a somewhat different
sort of training than cops need because the situations
they're likely to face are different, and the rules of engagement
are different.) Anybody who carries a gun for protection and
doesn't take one of them is a fool. I really suggest taking
several of them. Each course has valuable lessons to be
learned.

And practice, practice, practice. No one can maintain
competence with a handgun unless he practices regularly.
I shoot a minimum of 500 rounds a week to keep my edge.
One thing I do to make all this shooting fun is shoot dimes
out of the air. I toss a dime in the air with my gun hand,
draw, and shoot the dime before it hits the ground. Looks
impressive, but it isn't hard to do. I also draw caricatures
on targets with bullet holes. That's fun, and darn hard to
do so that it actually looks like someone too. But mostly
I just practice practice practice. If you aren't willing to
do that, don't carry a gun.

> *I* sure wouldn't want to see Bosnia or Chechynia repeated here on US

Bosnia and Chechnya are not examples of unarmed civil populations,
they _are_ good examples of what happens when you have an armed
civil population and a breakdown of government.

> "Blaming guns for Columbine is like blaming

OR, as has been repeatedly pointed out, if a guns purpose is "only to kill", the VAST majority of them are hopelessly FAILING their primary reason for existing - and THAT INCLUDES military and law enforcement "killing hardware"!

If the total number of guns possessed by military and law enforcement were totalled, and then compared with the annual numbers of deaths caused by their use, I have little doubt we would ALL be convinced that "nasty guns" are seriously failing as "killing devices".

TWO basic classes of gun haters in our world - one is those genuinely frightened and relatively ignorant of guns and how they are employed by MOST citizens - so they react with hatred and panic at the mere MENTION or SIGHT of a gun, and will go to great extremes to demonize and eliminate them.

Second are those who have ulterior motives, and see some form of benefit to THEMSELVES if guns can be eliminated in the hands of ordinary citizens. These are varying types of criminals who prefer unarmed victims - and politicians who realize that as government has become more grasping and demanding of its citizens, THEY TOO stand to benefit from the increased security an unarmed society provides as they continue their confiscatory ways. In earlier times, our government asked less of its citizens - and feared resistance far less than today, when they no longer ask, but DEMAND! And they have NO qualms about using group number one up above as their willing tools to accomplish their disarmament goals. And BOTH groups receive the complete and free assistance of a liberal media in advancing their agenda.

What an unimaginative dude! A big part of Columbine WAS
done without guns. There were a LOT of homemade bombs, up
toward a hundred by one police account. But, as usual, the
GUNS got all the media (read antigun) attention.

David M. Brodbeck wrote:

> The only purpose of a gun is to kill.

You couldn't BE more wrong!!! It is FAR more common that the mere presence of a gun serves to *prevent* not only possible killing by a perp, but heads off any probability that he will even consider making such a move.

Only a tiny percentage of gun owners ever use them for reasons other than just presence. It is a rare time indeed when one finds it necessary to do anything more than just show a weapon. Lets face fact, crooks aren't heros, the last thing they want is to get themselves shot. So they'll flee the scene macht schnell when the hardware shows.

Almost all cops -by far the vast majority- serve their entire career without ever cracking a cap in combat. The fact that the gun is on their hip is enough - nearly all the time it gets to stay there.

On the other hand, a recent TV special showed an interview with a hoodlum in England wherein he stated that the ban on privately owned guns was a very real boon to the crooks, who can get a gun anytime they want, legal or not. And they know that their law-abiding victims won't have one for their own protection. Makes his life VERY easy. And if he should decide that leaving witnesses is bad for HIS future, well, tough stuff for you, Pal.

Ths sad part is that *anyone* could be so dense as to believe that smuggling guns is any more difficult than smuggling dope, and it's no secret how much of that stuff gets into ANY country. In the USA, trucks cross the border by the thousands, mostly unchecked. Thousands of miles of shoreline and frontier are almost wholly unprotected. Countless thousands of railroad shipping containers enter the country daily, with only token numbers (1 in 10,000) being checked for content.

And it's ludicrous to assume that when any law is placed on the books that the crooks would just voluntarily comply. Instead, they're laughing at us - or you would prevent everyone else from defending themselves.

I bet you didn't know that the Supreme Court once ruled that the police are not obligated to protect individuals, but only society as a whole. So where does that leave YOU for protection? And even if the police were so obligated, and I can assure that most of them feel that they are, how many would it take to adequately protect everyone? Do you think it likely that enough could ever exist? When was the last time you heard of an officer being present, at the right time, to thwart a serious crime?

Banishing private gun owership is the province of fools.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

I have a complete S-100 desktop box.
It has a Z80 processor at 6MHZ and
64K of ram and dual 8 inch floppies.

It worked the last time I plugged it in.
That was about 15 years ago.
I can't remember the brand.
It was not one of the early famous brand names.

Anyone interested?

Hi folks,

I have a brand new Hammond modulation transformer model 2310
that I need connection info for please.
I have contacted Hammond and they say they don't have a file on it.
It's too old. If you have an old catalog from the 40's- 60's and have
a moment to look up what the 12 terminals are, I would be very grateful.
Z ratio, power, pri/sec Z etc.

Thanks,

Paul

Hi Ron, I am sincerely sorry that my post seeking out a component to restore a really neat old boatanchor that was on its way to the scrap-heap offended you and made other AM enthusiasts look bad. I figured restoring this vintage RCA transmitter and running it on 160/75/40 meters in the night-time mode (250 watts) would be alot of fun but I guess I better not or I might be wrongfully accused of going over the power limit and being a criminal. I am totally amazed how many emails I have gotten about this from the band police. I got interested in old AM transmitters by listening to some of the oldtimers that run them on 160. After surfing the net and viewing many pictures of these awesome 1500lb. beasts (Many in ham shacks) I decided I would like to get one. I even thought of putting up a web page so others could see the progress of the restoration of this old transmitter which is currently at an auto body repair shop getting professionally metal prepped, corrosion protected, and painted. I think I will pass on making a web page in fear of constantly getting flamed and I guess when I get it on the air someday I will be forced to tell everyone I am running a Heathkit DX-100.
Again- I sincerely apologize for making Ron and any other AM enthusiasts look bad by my egregious posting.

Jim W3ATV
>Gee - Isn't this set-up going to be a bit above the legal limit for AM

I've got a couple boatanchors that I plan on keeping for a long time (Drake and Hammarlund). Every once and awhile I see someone advertising for a replacement P.S. transformer. Is this the result of one going out in normal use or is it due to big time failure of the filter/bypass caps? Can varnished wire wear thin after 50 plus years of service?

Should I be on the look out for a couple replacements for the just in case scenario or should these things last forever as long as the caps are in good condition?

Thanks!

Steve, it's been my experience that shorts been windings takes them out many times. Not sure if this is due to minor imperfections in manufacture of the wire of many heating and cooling cycles of the device.

My understanding was that it is physical degradation of the winding enamel, frequently caused by a loose turn or two (due to no or poor encapsulation) vibrating at 60Hz and rubbing against its neighbor. Then they weld together, and you have a shorted turn.

I've rewound hard to get transformers, but this is can be a major pain in the ass (You make note of the winding configuration; cut the windings through; measure the wire size; count the turns. Then with new insulation and wire you rebuild it. When you are done, attach leads, verify measurements, and reassemble the core stack. Once everything is complete, bring it to a motor rebuild shop and pay them $10 to vacuum impregnate it with class H electrical varnish). This is why people try to get them on the usenet groups.

Thank you Rob Dunn for the information and assistance regarding the HP
23 schematic, and thank you Ken Grimm for the BAMA site. All the
participants in this cooperative endeavor are to be commended, and now
I also plan to provide some data to the site. Boat anchor hamming is
strictly a hobby for me and it's nice to see the cooperation! Thanks
again......

834. FS: Amplifiers, Tubes and Test Gear

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-13 00:00:00 UTC
From: Bob Weiss <bweiss@carroll.com>
Message-ID: <387E8AAB.24A309C4@carroll.com>
Source record: 73087
Cross-posted to:
rec.radio.amateur.boatanchors,rec.radio.swap,sci.electronics.equipment,rec.radio.amateur.homebrew,rec.audio.tubes

All prices plus shipping from 07657.

1.) Pair of Bogen MO-100 monoblocks. These are the early version that uses 6550's, rather than 8417's. With mounting rack. 100 watts/channel tube power amps. Sound great--recently rebuilt (3 months ago) with modern electrolytics and Svetlana 6550C tubes. $350 for the pair.

2.) Good, used, tested Amperex ECC88/6DJ8 "Bugle Boy". Pulls from test equipment. $10 each

3.) RCA 810 triode. JAN type CRC-810. Pull from unused equipment. $40 --With Johnson socket and Triad F-33U filament tranny $55

4.) Penta Labs PL-254W Triode. Pull from unused equipment. $25

5.) 2 pcs 4E27A/5-125B pentodes. 1 Eimac, 1 Sylvania. Both are NOS, but Eimac box is missing. $30 each or $50 for the pair.

6.) Westinghouse 5CX1500A pentode. Pull from working equipment. Tube tests good. $75

7.) RCA radiotron UV-201A Used, tests good. Brass base early triode. With bakelite "breadboard" socket. $30

8.)Modified Techron 8521 power amp in roll-around 19" EIA rack. Can deliver
over 5kW into a 2 ohm load. Frequency response DC-50kHz. +/-140V output.

Unit was a pull from an MRI scanner, and has been modified to operate from single phase 208-240 VAC power. All modifications professionally done. (Original xfmr, filters, rectifier removed, and replaced with fully rated single phase equivalents) Possible uses:

Motor driver
ELF transmitter
Shake/vibration testing
Stadium/Concert hall PA system
General scientific research

Or use it as the biggest subwoofer amp on the block! Just the thing to wake the neighbors up! :)
Best offer over $700 takes it. Unit is located in Northern NJ, and will deliver within 50 mile radius, or you can pick it up. This thing is HEAVY, but will ship via truck if desired (at buyers expense for shipping and crating).

9.) HP 651A Audio Oscillator. 10Hz-10MHz sine wave. 19" Rack Mountable
Good condition. $60

10.) Boonton Radio (HP) 202H RF generator 54-216 MHz AM/FM Rack Mount
Good condition $50

11.) Tektronix R5103 oscilloscope. Mainframe is in good working
condition. Accepts all 5000 series plugins. Comes with 5A16 dual trace
amp and 5B10 timebase. Plugins need work. $25

Thanks for the Bandwidth...
Bob Weiss N2IXK

Steve --

Take a look inside your BAs for any and all parts that are hard to get or known to be out of production. Transformers, Oil-Filled Caps, multi-stage can caps, and any other parts that will be hard to get. Keep your eyes peeled at hamfests etc. With BAs, it's almost guaranteed that when something goes "pop" you'll not find a replacement part the next day.

Also, once you determine which parts are pretty much unavailable, start thinking of modern equivalents to replace them with. For example, I have some oil-filled jobs in my BAs. If they ever go, I'll have to build a capacitor bank in their place.

Don't worry yourself silly, but keep an eye out to take advantage of an opportunity when it comes along

Did some digging and came up with the following:

Heath Crystal Filters
404-328
f =3395 kHz, BW = 2.1 kHz @ 6dB
$20

404-620
f =3394.3 kHz, BW = 200 Hz @ 6dB
$20

404-283
f =3395 kHz, BW = 2.1 kHz @ 6dB
$15

World Radio Laboratories 1956 Catalog
160 pages
$10

Allied Radio 1957 Catalog
350 pages some damage on spine
$15

Hallicrafters S-120 Manual
$10

Hallicrafters SX-99 Manual
$15

National NC400 Manual
$15

Henry Radio Tempo one manual
$15

All prices are postpaid.

You may find that a bleeder resistor will load the PS enough to reduce that
820 volts to a more reasonable value. Alternatively, you might try a small
choke, perhaps 1 or 2 Henry, at the rectifier output to the capacitors. A
capacitor input filter charges to the peak value of the applied rectified
wave, while a choke input filter goes to the average. You can look up the
critical value for the inductor in an older Handbook.

Why can't it be right? Has somebody repealed the rules of mathematics and
Watt's Law?
You probably would be smart to have a 100 W resistor for some leeway and so
the surface isn't so blasted hot.

> I've got an oldhandbook that shows a better solution (more stable

HUH???? What are they suggesting here?

> -Marty KI0LO
> martyt@pobox.com

If you put the rig in standby you will have the full voltage appearing at the
AF-67 as there will be no current flowing through the dropping resistor.
Perhaps OK but probably it's going to cause some problems as there could well
be components that will fail with 800 volts across them.

Does the power supply use silicon diodes and not rectifier tubes? If so, put
a variac on the AC side and crank it down to get the output of the 500 volts
you need with the rig loaded up into a dummy load to full power. If the
filament transformer of the supply is part of the HV transformer, use a
separate outboard transformer for the filaments of the AF-67. If the HP-23
has a separate transformer as part of it for the filaments, separate the
source voltages so that the HP-23 filament supply comes off a power supply
transformer that's connected directly to the AC supply and you get the full 6

volts.

OR find an old TV shop in your area where they never threw anything out. Get them to let you have an old chassis (or better two with identical transformers) from the basement or attic and build yourself a supply.

Was about the same when I was in those grades around 30 years ago and
was the same way 30 years before that. But, only recently has things
like Columbine begun happening. Guns and explosives where even far, far
easier to get.
But, thanks to the social experiments that they push on our school kids,
and the entertainment industry churning out movies and shows that
glorify such behavior how do you expect kids to behave?
Good God, the president of the United States can lie under oath and get
away with it. How do you teach your kids that "telling the truth" and
taking personal responsibility for your actions is the right thing to
do.
Recently there was a tragic car crash that killed two teenagers and
seriously injured a mother and daughter in another car. The 18 year old
driver was DRAG RACING in a Mitsubishi 3000 GT when he lost control.
What really made me angry was after that the press and the parents of
the deceased driver wanted the driver of the other car, a 17 year old,
to be charged with manslaughter and sent to jail for a long time. Like
the whole thing was his and his alone fault. That their son was in no
way responsible in his own actions of participating in the race as a
cause of the acccident. Plus, they had no responsibility in the fact
they gave a high school senior a high performance car that was built for
one reason, speed, and expect him not not use it for that. And he, being
18, was the only LEGAL ADULT of the bunch.
And, now one of the Columbine killers parent's want to sue the sheriff
for not warning them that the other kid might be a "bad influence" on
their son!!!! No personal responsibility.
No, I personally feel that parents now days rely on the school system to
not only educate but form the values of their children and be their baby
sitter. I coached softball and basketball for pre-teen girls. I had
parents who never came to practices or games. I was a baby sitter for
them to dump their kids on.

Source record: 72950

I put a Variac in the primary of my Power supply for my home brew Amp.
(4-1000) I run the Variac down to about 50-60 volts ac upon startup and let
the caps charge fully before applying full 220 primary. Secondary is
6000 vdc at 2 amps. in 15 years I have lost one Diode string in the Ps.
made quite a Bang.

Choke input reduces the current rectifiers draw when charging filter caps, as well as lowering the PS output voltage. This itself will make everything last longer. But if you want to keep your tunes (valves) happier, try a delay circuit on the HV (HT) primary. Give the filaments some time to heat up then turn on the HV (HT). You can do this with a small rectifier tube (valve) driving a DC relay. Have the relay turn on the main high-voltage primary.

If you require regulated high-voltage (HT) why not go ahead and regulate it?

Cortland

Don't know about mineral spirits, but every drug store sells mineral oil. That's what I used in my Cantenna, back when I bought it in the early 80s, and it worked fine. There are other, more electronically oriented oils, that are available, I believe, that will have a higher burn-out/smoke point, but plain mineral oil from the drug store worked great for me with my 100-watt rig.

It's not the wire that is the problem, it's the paper insulation used to wrap the transformer windings. This paper absorbes moisture from the air, over the years, and one day it arcs-over inside the windings.

Steve Huss wrote in message ...
+AD4-I've got a couple boatanchors that I plan on keeping for a long time
(Drake
+AD4-and Hammarlund). Every once and awhile I see someone advertising for a
+AD4-replacement P.S. transformer. Is this the result of one going out in
normal
+AD4-use or is it due to big time failure of the filter/bypass caps? Can
+AD4-varnished wire wear thin after 50 plus years of service?

If you want to keep the old transformer running, keep it cool and keep it dry.

A rule of thumb in chemistry is that reaction rate doubles for every 10 degrees C rise in temperature. Experimental work in the 1930's demonstrated that transformer insulation and such double their degradation rate for every 8 C temperature rise. It is good practice to keep the transformer temperature below 60 C (140 F). This is approximately the highest temperature where you can touch and hold your fingers there.

This is why in old tube gear, I always use solid-state rectifiers. The reduction of typically 10 to 15 watts from the filament winding allows the transformer to run a little cooler helping to compensate for its age. Most old radio designers knew little about heat transfer and many old radios run absolutely far too hot. Note that when silicon diode are used rather than a tube, you may have to add a series resistor to keep the voltage at the old level. The heat dissipated by this resistor is exactly the same as that produced by the plate dissipation of the rectifier tube. But you often have some control over where this resistor is located giving you better heat transfer. A small fan will work wonders in keeping old gear cool.

Proper fusing generally takes care of capacitor failure as a transformer can usually take a very high overload for a very short period of time (until the fuse blows).

Steve: HEAT IS THE NUMBER ONE ENEMY.

The Drake pwr supply needs ventilation leave the cover off.
I am an electrician working for Chrysler and we use a lot of water cooled transformers and others are keep cool with forced air.
We never had any burn up yet.
My job is keeping about a dozen welding robots working.. lots of transformers which are water cooled and the ones in the controller are cooled with muffin fans.

I'll chime in and say also that many of the real old boatanchors and antique radios were designed for 110 VAC and not the 120 VAC that you get these days. The radio will still perform but running them at just that higher voltage will shorten its days. I know many antique radio collectors that come up with all kind of wild ideas to drop the input voltage.

> through; measure the wire size; count the turns.

Counting the turns is very easy, just count the turns in one of the filament windings, which will not have many turns. Divide the number of turns by the voltage and that gives you the turns-per-volt, and all windings will be wound using this ratio. Example: 5 volt winding with 20 turns = 20/5 = 4 turns-per-volt. The primay winding would then need 120 volts X 4 turns-per-volt = 480 turns, 400 volt HV winding would need 1600 turns, ect.

Just some fairly random thoughts:
Things often go wrong at switch-on time. May be due to damp aggregation since last use and/or high surge voltages.
Since a silicon rectifier conducts immediately, it might reduce surge voltage across your transformer. On the other hand, if the rest of the set is not conducting immediately too because the heaters have not warmed up, it won't.
Then it will produce a temporarily rather large H.T. voltage which could strain your smoothing C's.
Maybe there's something one could put across the HT to temporarily conduct during the warm-up period.

I wonder is there any automatic way of producing a soft start by adding something on the mains' side of the transformer? Perhaps one could run the whole set from some sort of mains adapter that produced a soft start.

Some valve rectifiers are directly heated and conduct before the rest, just like a silicon diode. An indirectly heated rectifier valve would cushion your smoothing C's and the rest of the set but might put extra strain on the transformer.

One one of my sets I've added a semi-conductor regulator on the DC HT. I don't know what it does to the transformer, but it keeps everything at 230V after the regulator - and eliminates mains hum from the HT line. It doesn't like sudden high voltage inputs, but is very reliable so long as nothing unexpected is done to it.

AS others have mentioned, COOLING goes a LONG ways in helping older tube/transformer gear live! As much as possible, I enhance cooling by use of common and inexpensive muffin fans on ALL my "vintage" gear - my Drake twins, Gonset G-28 - even my Amp Supply LK-500. The power transformer inside my Drake R-4B got so hot without setting the fan on the case above it, that it would literally burn my fingers when touched after a few hours use - only lukewarm AFTER the fan. I use small foam rubber pads attached to the corners of the fan frames - no marring of equipment, but MUCH cooler operation!

An old friend of mine used to put thermistors in series with the transformer for a soft start. These were *large* thermistors, like a big MOV in size. He said he got them at TV repair shops and they were meant for exactly this purpose.

if you don't let the rig get too hot or store in damp place it should last a
ong time..
transformers generally last a long time and heat is the big enemy of
insulation..
turning the rig on&off puts some stress on the windings and this can stress the
varnish..
if the rig is properly fused shorts should take the fuse out..
i used to work in service and power transformer failures are quite rare..
but as the rigs age they failures may increase..
i have several tube radios and don't worry about it..

I wouldnt stock up on transformers. You can get a transformer rebuilt. If you have a large boatanchor collection, there are just too many transformers to stock up on.

--> I'm not trying to excuse anything those people did. But when we have school administrations that look the other way when the star football player beats up someone who's "different," it's not hard to see that pretty soon there's going to be some really resentful, angry people at that school. As someone who was a bit different from the norm in high school, I can tell you that schoolkids get away with things that would be considered assault and battery in the "real world," and teachers simply look the other way. High school and junior high were the most hellish seven years of my life, and I can *easily* see how someone could be driven to committing murder by the experience.

Banning guns won't fix it. Requiring schools to post the 10 Commandments in the hallway won't fix it. It's the way we run our schools that hast to change. Right now they're basically like prisons, where the strong prey more or less freely on the weak.

893. P/S Dropping Resistor

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-14 00:00:00 UTC
From: Marty Tippin KI0LO <martyt@pobox.com>
Message-ID: <85o5v0idq1@nnrp1.deja.com>
Source record: 73035

I've got a Heathkit HP-23 that puts out 820v on the high side -- I need to drop that to 500v for a Multi-Elmac AF-67 that I'm working on, and either my calculations just don't work out right, or else it can't be done like I think...

I need a voltage drop of 320v at 170ma (max) across the dropping resistor. So R=E/I gives me 1882 ohms (or 2K is probably close enough). But where it falls apart is trying to figure the size of resistor -- P=E*I says I need a 54 watt resistor - which can't be right.

I've got an oldhandbook that shows a better solution (more stable voltage when the current changes) is to put a resistor on both sides of the line that I need to drop (i.e., one from HV to the lower voltage tap, and another from that tap back to ground) - but it doesn't give any real way to figure out the current through the second resistor -- says the value has to be assumed to be around 10% of the other side. There must be a more scientific way to figure that out.

I'm just about as new to this stuff as one can be, so this is a learning experience for me. What am I doing wrong, or is there a better way entirely of modifying the HP-23 power supply to get the voltage I need?

Ham Radio University - HRU2000
Babylon Town Hall Annex
Phelps Lane & Miller Ave
North Babylon, NY
Sunday January 23, 2000
9:00 AM - 2:00 PM

This is a special day of education for amateur radio. Many ham radio Clubs and organizations from the New York City-Long Island Section will have information booths. This is your opportunity to meet the local clubs and organizations and learn their activities, meetings and membership. There will be a free tune-up clinic, DXCC & WAS card checking, eye-ball qso room, a full VE session along fifteen technical forums with guest speakers from the NLI section.

Donation: $2.00. Spouses and children under 12 will be admitted free.

For more information via Internet: http://arrlhudson.org/nli/hru2000.htm

Contact: Phil Lewis N2MUN (631) 226-0698

For sale:

Transmitting Ceramic Switch Assembly, 4 position -
Heavy-duty construction, with glazed ceramic sections and
standoffs etc. Utilizes silver pad wiper and contacts
over 1/4 inch diameter with single contact per position.
(Triple wipers!)
Good for 1 to 1.5 KW, perhaps even 2 KW. Dimensions 2-3/4" X
2-1/8" and is 1-3/4" deep. Shaft is 1/4" diameter and is 3/8" long.
Excellent RF heavy-duty switch. If you want a beautiful heavy-duty
ceramic switch, this is it!
Includes original black knob. (QTY 1 only)
Will sell for $12.00 plus shipping

Source record: 73041

Hi Marty,

Your calculations seem O.K. The easiest way to dissipate the power and drop the voltage at the same time, although not the tidiest of remedies, it is alright for a quick hookup to do the job.
Obtain three 110v 20watt household lamps (or bulbs as we call them over this side of the pond). Connect all three in series. Use the two outer ends of the circuit as your connections. This will drop up to 330v at 180mA, the "hot" resistance of this lot is 1815 ohms. (It's near enough to what you want).
I hope this helps you out.
Best regards,
Duncan G4DFV ------0--------------0-------------0--------

if you have solid state rectifiers you'll need soft start..
and the variac does that...
if you can try to retorque the lamination bolts..
i have a collins 30S-1 and tightening the bolts did a lot to quiet the thump..
i have solid state rectifiers..
vacuum diodes give soft start while the filaments get to operating temp..
pole pigs were never designed to be quiet..
i'd leave well enough alone and use the variac..
and be happy..

Replace "shovel" with any number of non-gun appliances, and
the answer is "They are!".

The fact is that the liberal press, IE, opponents of
private gun ownership, choose to ignore all that and give
all the (negative) press to violent crimes involving
firearms alone. And virtually *none* to the vast numbers of
cases where citizens ward off crime and violence by the
simple fact of owning -and making it known at the right
time- a firearm.

So removing all firearms from private individuals will
solve such prolems? Surely you're not that obtuse. That
didn't start it nor will it stop it. Look what the "war on
drugs" has done to stem the flow.

All this push to destroy private ownership of firearms has
done is to polarize society. It won't get any better. A
friend told me recently that he heard a fellow who just
retired from the Marines say that he got out because
officials had warned them that they would someday be using
all that military training and hardware against fellow
Americans...

Speaking of which, did you see "20/20" last night where
the 20/20 folk gave politicians a hard time for admitting
and joking about their own drug use while sending otherwise
innocent citizens to jail for 20 years for the same thing
they freely admit doing "when they were young and foolish"?

Glad to see our Second Amendment Militia training in such a
rigorous fashion. But what's the upper limit of our nation's
militia? Isn't it 40 years old as defined in the CFR? If so,
it seems that gun-ownership would be limited to those under 40.

>Remember, shooting guns is an olympic sport. Nobody killed there.

There was a fellow here who participated on his high school rifle
team; he was an expert shooter. Twenty years later he walks into
his workplace, Xerox, and kills seven of his fellow workers.

Hi Henry
Yes I understand that they don't fully charge at the low starting voltage that I use, but by the same token when I turn the Ps on my overhead lights don't dim as if I had put a dead short on the mains coming into the shack and the Xformer does not make the loud thumping noise like it does when brought on line with full voltage. I am not sure but I think that it may have some loose laminates or loose windings in it. hence the use of the Variac to control the inrush of Voltage at startup. by the way the xformer is a recycled Pole Pig (7200 vac primary 220 vac secondary) that has been removed from the can had all of the oil washed out of it and sprayed with Glyptal Insulating Varnish. I am seriously thinking of removing it from the Ps and cleaning it up again and going to my local motor rewind shop and having them do a vacuum Varnish and then bake it for a better insulating Job.

I have for sale as a package only:
T-4XC: Ser# 22074, manual and "marked" inter connecting cables. Chassis shows slight corrosion and minor scuffs on case, face looks good. Two extra Xtals for crystal control are included, but I'd have to pull case to give details.
MS-4: Face in good condition, case ok, has been touched up in spots, has a couple scratches and a dent on the bottom rear (not noticeable from front or side view)
AC-4: Ser#53368 in good working condition.

Asking $400.00 plus shipping from MailBoxesEtc (3 separate boxes) or meet you around the Dallas area

Gun critics ALWAYS conveniently place a modern army group against an opposing citizen group isolated in some log cabin, armed with deer rifles - like the Montana bunch... SURE in such an isolated and STUPID scenario, the citizens have little chance...

BUT, merge a few hundred terrorists or other dissidents with the "ordinary" citizens walking down the streets of any major US city - from which they are free to strike out at will - and THEN describe to me exactly how marvelous those smart bombs, tanks and supersonic fighter-bombers are going to be!

What good is a fully outfitted aircraft carrier against a dozen scattered/hidden dissidents in Manhattan?

What are you gonna' DO, kill EVERY citizen in order to get the small percentage of REAL "revolutionaries" or terrorists? I suppose that "mentality" DOES make sense to the SAME folk wanting to disarm ALL citizens in order to reduce the FEW actually abusing guns in our current society...

In England, the IRA has been a thorn in the side of the British for DECADES - WHY haven't the Brits simply overwhelmed them, wiping them out with their "superior firepower"? INSTEAD, the steady, resolute dedication of the IRA has finally forced the British government into serious discussions recognizing the demands of the IRA, and active steps to correct them - would that have happened WITHOUT force of weapons by the IRA? And what is the VERY FIRST counter-demand by the Brits? Why, they want the IRA to disarm - can we guess WHY?

Dedication, stealth and determination CAN overcome VAST amounts of "superior firepower"!

As long as the *battlefield* is carefully selected...

Source record: 72914

Very nice condition Hallicrafters S20R receiver. All original knobs, cabinet in nice shape no rust spots. Bandspread Dial's plastic "meter style" trim cracked on top left corner. Main tuning dial has faded spot, but only small section. Front panel lettering sharp and clear with the only exception being the word "audio" which has the top of the aud faded.

Works great. Very nice for AM broadcast or to copy the AM'ers on 3.885. No hum or buzz. Appears to be all original with no mods.

Comes with original Operating and Alignment Manual.

Price: $150, or open to trade offers.
What do you have to trade? Looking for any of the following: Drake 2BQ, 2CQ, 2NT; Johnson Adventurer; Heath DX20, DX35, DX40; Vibroplex Bug;

939. FS: R808-GRC-14

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-15 00:00:00 UTC
From: Bob <bmiller@calweb.com>
Message-ID: <3880f5d1_1@news3.calweb.com>
Source record: 72926
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

A very nice and almost museum condition R-808-GRC-14 receiver. This is the general coverage receiver part of the GRC-14 Field Radio TTY unit. It operates from either 115VAC/60 Hz or 28VDC. The unit covers HF through 30 mhz with various bandwidths. AM/CW and has the unique feature of having a TTY demodulator contained within its very very heavy cabinet. The unit is complete with hardly a blem on the cabinet (Dark Marine Corpse Green) and the front panel is pristine. The only modification (easily reversed) is the front panel power connector has been replaced with an octal male plug to provide connection to the AC power cord (supplied). The original mil plug can be installed and I may have that item in my junk box. Otherwise it is plug and play. I will ship this unit if it does not break the UPS maximum weight. Will post weight to interested parties.
While it probably won't preform as well as the R390, it is no slouch after a few hours warm up. A nice addition to any "serious collector's" (heh! heh!) pile.

$250 plus ups and versapack fees on at least 100 lbs from zip 95827

Tnx for the read es 73

You're missing the point. You don't have to shoot down the F-16s or Apache choppers or knock out the tank. A well organized resistance movement will not allow the F-16s, Apaches, or tanks to shoot at them!! Let the aircraft and tanks use up their resources with little or not return.

Cecil wrote about Vietnam and Afghanistan. He neglected to list Korea. Go to the library and get some books on the effects of airpower on the Korean War. While you're at it, read about Vietnam and Afghanistan.

Will --

If you really want to do something to save lives, why don't you start a campaign to ban the automobile? They sure as shootin' kill more people every year than guns do!!

Then you can work on the primary factors for heart disease. Why not start a campaing to ban all lifestyle elements that lead to heart disease.

How about abortions? I haven't checked the stats recently, but I'd lay a plug nickel that killing babies (oh excuse me, viable tissue masses....) by "govenment approved" abortions results in more murders than killings by guns.

I may have some information on the SB400. Several years ago I saw one for sale at a market trader's stall in Glasgow ("The Barras"). It wasn't working because of a short circuit on the driver variable capacitor. There was a profile on this rig in Shortwave Magazine during the 1960's. I'll look it out and send you what info I can find.

Yes - choke (or resistance) input must reduce switch-on stress on the transformer, rectifiers and the rest of the set.
I suppose the thing to do is to hook up the circuit and see what values are best. The valves take a long time to warm up though. How much protection can the choke input give?
How about using a dummy load on the smoothed HT line initially and automatically switching the HT to the valves by a relay after about 20 seconds? That way the secondary sees a constant load.

Cross-posted to: aus.electronics,aus.radio.amateur.misc,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

This is a device for measuring forward or reflected power, also known as a directional coupler.

Ranges:

Forward - 200W & 2 Kw
Reflected - 200W & 2 Kw

Frequency: 2 Mhz to at least 30 Mhz

There are 3 parts: the power sensor, which is a metal block 6 cm x 6 cm x 4.5 cm, the meter (7.5 cm square) and the range switch. The power sensor has 2 N connectors, power in and antenna and 4 feed-through connections to the range switch.

The meter scale is non linear. Center scale low range is 80W, high range 500W.

This is the same assembly as used in the Collins KWM2 series of transceivers, and was removed from a piece of test equipment.

In excellent condition, completely wired, with wiring diagram, and ready to mount into your equipment or a small box.

Shipping weight approx 500 gm.

Best offer takes it.

John Mackesy VK3XAO

PS - it's NOT a dummy load!

Marty,
I'm not sure why you say 54 watts can't b right. You're dropping a LOT of voltage there with a resistor. Your calculations are probably correct. BTW, I'm not sure why you would say the value on the ground side would only be approximately 10% of the B+ side. The current flow is the same through the entire circuit.

I really think a dropping resistor for that much voltage drop probably isn't a good idea. Perhaps you should either modify the PS or find another one closer to what you need.

Good luck with it,

73,
Barry - N4BUQ

968. Older low mil ammeters needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-15 00:00:00 UTC
From: picture@means.net
Message-ID: <picture-1401002344350001@erskine-as5200a-62.dialup.means.net>
Source record: 72969

I am in need of two ammeters vintage 1950-65 or so. I need to meter one circuit with an upper limit of 5 mils, and the other around 150 mils. One should read 0-5, or 0-10 milliamps. The other should read 0-20 (can use a shunt resistor to make it work), or 0-150, or 0-200 milliamps. A meter or two from any of the Heathkit DX or similar transmitters would probably work also. Any help would be appreciated. The older round style black meters would look good in my project, but I'm not going to be choosy. Please e-mail if you can help. Greg

>Just some fairly random thoughts:
>Things often go wrong at switch-on time. May be due to damp aggregation
>since last use and/or high surge voltages.

More likely it is the electrolytic capacitors that have hydrolyzed. When not used for long periods of time, electrolytic capacitors lose their voltage rating. It is usually possible to reform them if care is taken.

>Since a silicon rectifier conducts immediately, it might reduce surge
>voltage across your transformer. On the other hand, if the rest of the
>set is not conducting immediately too because the heaters have not
>warmed up, it won't.

Silicon diode or vacuum tube diode, the transformer voltage is determined by the primary voltage and the respective turns ratio. Voltage surges may appear on the power line, but either type of diode does nothing to prevent them.

>Then it will produce a temporarily rather large H.T. voltage which could
>strain your smoothing C's.

Yes, with a silicon diode, the high voltage will be applied immediately. With no load on the power supply the voltage will be high. Properly sized capacitors, i.e. those with a high enough voltage rating, are always needed. Many vacuum tube rectifiers like the 83, 5U4, etc. have filaments rather than an oxide coated cathode. These conduct quite well within a second after the application of power. With no load, the voltage will again rise above normal operating values. The answer is to use properly rated capacitors.

>Maybe there's something one could put across the HT to temporarily
>conduct during the warm-up period.

Why? The voltage drop of the transformer output with load versus no load is generally small; it is determined by the leakage inductance and the winding resistances. Only in poor quality transformers (like the RS filament transformers) does the no-load voltage greatly exceed the loaded voltage.

>I wonder is there any automatic way of producing a soft start by adding
>something on the mains' side of the transformer? Perhaps one could run
>the whole set from some sort of mains adapter that produced a soft
>start.

The simplest way to do this is to use inrush current limiters. These are negative temperature coefficient resistors that, at room temperature, have

a moderate value of resistance (typically 5 to 50 ohms). But as current goes through them, they heat, and their resistance drops to a very low value (0.02 to 1 ohm). They are excellent for new designs, but in old radios where you have replaced a tube rectifier with a silicon diode and a series resistor they are generally not needed. However, they do not hurt and they can reduce the thermal shock of applying heater power instantly to cold tubes (which draw several times their rated current before warming up). If you use an inrush current limiter, remember that they get quite warm in operation.

>Some valve rectifiers are directly heated and conduct before the rest,
>just like a silicon diode. An indirectly heated rectifier valve would
>cushion your smoothing C's and the rest of the set but might put extra
>strain on the transformer.

But the whole point was reducing the load on the transformer.

Cortland Richmond wrote:

>Soft start is inherent with a choke input filter.

Only in the sense that the peak current is limited. With no load on the power supply, the voltage can and will rise with choke input filters unless the supply has an adequate bleeder load. In receivers and most transmitters, the choke is sized for the operating conditions and a fairly low bleeder current is used. Thus without the operating current load, the choke is less than the critical inductance and the voltage will rise.

In talking about electrolytic capacitors, remember that quality units have a surge voltage higher than their rated voltage. Thus 450 working voltage capacitors have a typical surge rating of 525 volts. Keep this in mind when selecting capacitors.

Mark Bell wrote in message +ADw-387fae46+AEA-news.desupernet.net+AD4-...
+AD4-
+AD4-Is Mineral Spirits the same as Mineral Oil? Is it safe to use it in the
+AD4-Cantenna? What are alternate oils (or similiar) I can use?

Heaven NO+ACE-

Mineral spirits is a light petroleum distillate much like kerosene and it
is used as paint thinner.
It typically has a flash point of 100 to 105 F (38 to 40 C). At this
temperature, it has a high enough vapor pressure that its vapors form an
explosive mixture in air. One spark and BOOM+ACE-

White mineral is a low viscosity paraffinic oil with a much higher
molecular weight than mineral spirits. Depending on manufacturer, mineral
oil has a flash point of 250 to 400 F. Its boiling point is higher still.

Many local electric companies will give you or sell you a gallon of
transformer oil quite inexpensively. But basically most transformer oil is
just mineral oil with some added antioxidants.
Ordinary drugstore mineral oil will work fine, and if you want to add some
antioxidant, cut open a few Vitamin E capsules and add the oil inside to
the mineral oil.

When using any flammable product around electrical equipment, it is
important to know its flash point. Many hams swear by (or swear at) WD-40.
It has a flash point about 105 F. So NEVER use it or other solvents around
live electronic equipment.

Beautiful homebrew amp, single 4CX1000A, 80-10 meters. In rack cabinet,
has antenna tuner built in, rectifier tubes in power supply. About 44"
tall, very heavy. Excellent workmanship. One of a kind.
Prefer pickup near Sedalia, Mo, we can discuss that.
Sell or trade, what have you? A really nice SP600, SX73, R390A would
be a good starting point. I can email a front view picture if needed.
Let's talk. Email direct if interested, thanks.

Nope, mineral spirits is a solvent, mineral oil is a light dilectric
oil. Your best bet is the get a gallon of transformer oil from your
local oil jobber, failing that baby oil will work. Don't use cooking
or olive oil, it can dry up and it does not conductthe heat away
properly.

That "TV special" was an NRA infomercial. I have viewed the very scene a half dozen times now, as the whole thing airs twice a night on various channels.

This sort of thing makes you understand why it is necessary for the words "Paid Advertisement" or the like to appear when they air these things, and even so some are still taken in by what is cleverly crafted to give the appearance of news reportage.

Yes - I realise now that you're quite right on this since I've just
measured the transformer secondary in my AR88 to change from 690V to
675V AC as the
set warms up. I thought there would be a much bigger drop.
So there's not much simple you can do for the transformer except keep it
dry, minimise heater current as you suggested, and use a fan.

No mineral spirits and mineral oil are NOT the the same. Mineral spirits
are have a very low combustion point, which would be very undesireable for
the load.

A far more interesting question than the hardware is why such an
atrocity would occur at Yuppieville Central rather than Ghettoville
Mechanical. It is not that it is done badly but that it is done at all.

Well for openers, there is more hype about guns, who knows, maybe you have started something new, listen to the news, I for one won't blame the shovel if a murder is commited with a shovel, I will just have to blame you!

This whole conversation is getting silly, if I come to your place and shoot you, please blame the gun not me. The killing fields have been around ever since Kane and Abel. IT IS SICK PEOPLE THAT KILL, not guns.

my 2 cents worth.

I agree. I do not have a crank starter on the front of my 95 Dodge. Why? Mr. Kettering invented the self starter. I do not want to work CW. Why? AM, SSB, and all the digital modes are enough to satisfy my wants and desires. If you want to and do work CW, that is great and I wish you every happiness. I feel CW is like the crank on the old car, might come in handy some day and some may like to use it for the novelty of it but a crank (CW) is not for me. I know of many technically minded individuals (computer and network engineers) that would love to become hams, but with a career and family just do not have time to learn something that they are not interested in and do not foresee using just to get a ticket. Before you say it, I did my 5 wpm for my novice ticket and upgraded to technician back in the mid 80's. Made a couple of CW contacts on 40 and that was it for CW. I have been wanting to upgrade for a number of years, but I do not have the time to relearn CW and get to the 20 wpm level, pass the test and never use it again.

As for the CBer's, OM give up your prejudice. How many of you stiff necked hams WERE CBer's? Granted there are many on the 11 meter band that I would NOT want on the ham bands, but as some or many of you know there are just as many good people that would be and have made excellent amateur radio operators.

Haven't you noticed amateur radio is dying a slow death? I can see it at every hamfest I attend. The same hams attend every year and I see very, very few new faces. I have had a lot of ham friends and acquaintances pass on in the last few years. For every ten that leave the hobby maybe 1 new ham is recruited. Something has to be done. The way things are going now in 30 - 50 years there will not be anyone left to talk to. I bet that would make some out there very happy.

There's an old saying here in Texas, "there's no need to whip a dead horse". I suppose that's pretty much good advice and could be considered good horse sense. Seems to me about all you guys will accomplish with your petition for reconsideration is to stir up one more small stink. Meanwhile, while whipping that old dead horse, the possibility surely exist that you're isolating yourselves even more.

If the efforts put forth in the preparation of your reconsideration petition had been positively channeled into thoughts of what might be done, along with actions that could be taken to make this transition period in amateur radio less trying, you may have been able to enjoy the gratification of those endeavors during the future of this hobby.

You hear about it because it not that common and we expect extra class amateur radio operators to be better.

>
>
> can anyone explain to me why hams are always whining and cryiny about
> c.b.ers? 90% of the hams were c.b.ers themself at one time.
>

Because the CB band was once a ham band and now its a failed political experiment, with CB using echo mics and other stupid stuff to talk / play with themselves and pretend they're shock jocks. I was in CB in 1968 before the 'outlaws' took over and in 1971 I ran away from that zoo. Hams get upset because of the bad press all radio operators get from CBs. When a CB causes interference with his 2KW amp, the local Ham gets the blame. CBs are limited by law to 3.5 watts out!

>
> can anyone explain to me how hams know so much about c.b.ers? seems to
> me if one stays off 27Mhz.....

We do or it would be a nicer neighborhood! We would like the CBers to stay away from our bands.

> lots of extras BUYING thier vanity calls. they took advantage of
> something? no the paid!!!!

Those who want vanity call signs because they want an old call or their father's call or because we use it as a second name want a license issed by the Government and not something given by one idiot to another. I would not be happy with BADASS or FATFACE101.

> you guys don't start a thread you start a rope! becareful you don't hang
> yourself with it!!!!!!

Maybe we could take that rope and hang the CBers who violate the rules.

>
>
> 73, RFriffraff, 10-4?

> buck/boost transformer available at any electrical supply store)

--> 118V here, at the moment. You don't necessarily need a special transformer, either. Any hefty power transformer will do -- just make sure the current rating is high enough. What you do is wire the primary as usual. Then wire one side of the secondary to one of the primary terminals (probably should be the 'hot' side, ideally.) Now connect an outlet between the remaining secondary terminal, and the other primary terminal. Measure the voltage. You'll be either bucking or boosting the line voltage by the secondary voltage of the transformer. If it's boosting, reverse the secondary leads. I hope this is fairly clear. With a 12V transformer you could then have 108V to run your old radio off of, assuming your line voltage is 120V.

Here's a crude diagram that will either help, or totally confuse you. ;>

```
/----\
--------+-\ | /-------------------
3 | 3
3 | 3 12V
120V 3 | 3
3 | 3 108V or 132V out
3 | \--\ (depending on secondary phasing)
3 | |
-------+--/ \-----/
|
\---------------------------
```

Choose the transformer voltage based on what your local line voltage is and what you have handy. I've seen 'normal' line voltages as low as 112V and as high as 130V, depending on the location and time of year.

1007. FA: Nordmende Elektra German Table Radio

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-16 00:00:00 UTC
From: Joe Schreiber <jschreiber@adelphia.net>
Message-ID: <gwbg4.491$en6.4727171@server2.news.adelphia.net>
Source record: 72853
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.shortwave,rec.radio.swap

Covers the AM broadcast band, Shortwave, and FM broadcast band. Front panel has concentric controls for volume, treble, tuning, and bass. Piano key style buttons are used to select the band, or the phono input, the connection for which is on the rear panel. An additional 3 buttons are used to selct speech, solo, or orchestra tone. There is also a tuning eye indicator, but it is very weak and is hardly visible. In addition to the phono input, the rear panel has connectors for an external speaker, an external shortwave antenna, and an external FM antenna. The power cable, fuse, and an input voltage selector are also found on the rear panel. As you can see from the picture, this radio is in good shape cosmetically, and it works well on all bands.

Source record: 72863
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

Hi Gang,

I am adding (almost daily) new magazines in my estate auction on eBay. I have entire year issues of 73, CQ, QST and Ham Radio (some dating back to the 30's) and am listing them as I dig them out of the boxes. Anything newer than 1979 is going to the recycler as bid prices are not worth my time to deal with.

Please do not ask me to "look for" a certain year. I list 'em as I find 'em but, if you would like, Email me a list of wants and I'll notify you when I put them on eBay.

As always, ALL proceeds from these auctions are being forwarded to the estate. My "cut" is being allowed to keep some of the items I find. To date, these auctions have netted over $1000 for a very appreciative widow.

See my current auctions at:

http://cgi3.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=radio_randy

Thanks everyone.

Radio Randy

All solid state except for driver and 3 (yes 3!) 6146B finals that delivers a "pileup breaking" signal. Features audio peak filter, variable IF bandwidth and IF shift, all modes(ssb,cw). The silicon development of the day gave it a digital display. Optional VFO gave a few memory channels and keypad entries.Radio is in excellant condition,matching external VFO(FV102DM)may need a little work.

I gave my source you idiot! I said "Ham magazines" you must know what those are since you are a ham. You know like "QST", "73", "Popular Communications" (which has a little bit of everything). They read like "malicious interferrence on repeater." "Interferrence with police transmissions." And I can go on and on and you could go on and on, but these offenses are almost, not always, but almost committed by extras. If you don't like what you're hearing on CB band, then why are you spending that "five minutes" listening? And don't kid me good buddy, you spend more than five minutes there. Who do you think you're shitting? Ten bucks says your HF rig is Mars modded and I'll bet you don't have a Mars call. When you post your Mars call, I'll post mine.
Ninety percent of CB'ers - well, I guess I can't really prove that percentage. All I can say is I've met alot of hams in the past 10 years and almost all of them that I've talked to have said "they were on 27 MHz in the early 60's". So maybe it was only 89%.
Quit your whining and get off the computer and back on your HF rig because it sounds like you spend more time on here than there .-.-.- !

You forgot some other "basic classes," one of which is the regular military, who looks down upon the Second Amendment militia as a pitiful collection of ragtag wannabes and posers, dressing up in mock fatigues, pretending an NRA decal is some kind of badge. The dictionary provides a well-established definition:

"Irregular: Not belonging to the established army organization; not forming an organized military body (1856)."

Irregulars. Perfect description.

Now, having traded insults, let's get back to radio. ;)

Kissenger used to play good-cop/bad-cop with the North Vietnamese in
regards to them not abiding by some concession, saying something like,
"My boss, Mr. Nixon, has discussed using a nuclear device on Hanoi..."

There are other methods in place of air power in achieving a desired goal.

FS:EF Johnson Viking Ranger 2. I got it with AC cord snipped but rig seems to be complete. W7FG Manual. Has all tubes but condx not known. No dents but flaking paint on cabinet. I was going to restore unit but just don't have time. Email for more details. Prefer pickup in mid-Michigan but can arrange shipment. $150 plus shipping/ins.

At a recent trade show 'inside the beltway' catering to
the so-called 'clandestine security industry', Ramsey was
selling lowpower audio and video equipment which operated
on amateur frequencies, and the target market was NOT hams.

When asked about it, the Ramsey booth personnel responded.
"Keep your nose out of it. Nobody cares what frequency it's
on." Looks like there a lot of "sheep" reading 2600 too.

1039. Petition filed on Restructuring (fwd)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-16 00:00:00 UTC
From: jeffreyh@hawaii.EDU
Message-ID: <Pine.GSO.4.10.10001160454540.15570-100000@uhunix5>
Source record: 72885

Received the following from N5LF.

Jeff KH6O

---------- Forwarded message ----------
Subject: Petition filed on Restructuring

You all might be interested in the following:

Most of the ham community assumed that lower CW requirements would be accompanied by a higher technical level on the written exam. But BOTH CW AND WRITTEN will be lower skill -- for ALL license classes.

A Petition For Reconsideration of the FCC's Restructuring has been filed by Wormser, Adsit, and Dinelli. You can read it on http://www.qsl.net/n5lf

Please e-mail or write the FCC in SUPPORT of the petition by February 16, 2000.

You can comment using your Web browser or by e-mail at:
http://www.fcc.gov/e-file/ecfs.html
Refer to WT Docket 98-143 (Amateur Radio Restructuring) and to the Wormser, Adsit, and Dinelli Petition. The Report & Order is called FCC 99-412.

You can mail your comments to:
Magalie Roman Salas, Secretary
Federal Communications Commission
445 12th Street, SW
Washington, DC 20554
Refer to WT Docket 98-143 (Amateur Radio Restructuring) and to the Wormser, Adsit, and Dinelli Petition. The Report & Order is called FCC 99-412. Send 7 copies.

Even though the FCC may not reconsider their decision to "dumb down" the written and telegraphy exams, the petition lays the groundwork for new initiatives in the future that could correct the situation.

Read the petition, and the original Report & Order. SUpport the parts of the Petition that you can, and add any additional issues that we missed, or variations that you are comfortable with. Let the FCC know what you think.

(This e-mail message will not be relevant after February 16, 2000. Please do not forward after that date.)

73 ES BCNU,

Alan N5LF

You guys who wonder about our (my) enthusiasm for these boatnchors can get a taste of it by looking at the new eddystone page:
http://www.qsl.net/eddystone/

I have 6 Eddys and am always looking for more. They are great radios, with a wonderful history, and very good performance. The tuning mechanisms were unrivaled in their smoothness (although I must give a tip of the hat to my Geloso 209, which has absolutely the smoothest tuning gear I ever (never) felt. But the Eddies are great.
Take a look!

YOU still haven't got it yet . You guys won't be happy until you completely kill the Ham radio hobby by having it your way . If you can't changes with the times maybe it's time for you guys to get off the air and find some thing else to do . What the FCC has done has given a little more life to the hobby if they don't this will surely be the end .

We dont want the code. that should be obvious by now. So why is it necessary to keep ramming it down our throats ?

The FCC has changed ARS to permit more people to enjoy it. What is wrong with that ? I think it will be fantastic to see the bands crowded with new people to talk to. FIeld day will be wonderful. Lots of members for the clubs. A real interest by the community. Probably more incentive to manufacturers to design new equipment.

Lets stop trying to pretend it is "The Olden Days". 5 words a minute is adequate. No one says that you cant use a faster speed.

Yes I have the Solid State Rectifiers. You are right the P/P is not a quiet xformer and was never meant to be one. but due to its location few people complained of the buzzing noise plus the oil and the can damped the sound greatly so most people did not hear it anyway. I did retorque the lamination bolts to destruction got new one's from my local friendly H/V High Line man (local Co Op) put new bolts in place and torqued to 25" pounds with 1/4" drive Torque Wrench borrowed from same source. still thumps on full line voltage startup and slight buzz during operation. But I can live with it. Doug.

1047. FS: WONDERBAR RADIO FOR '57 CHEVIES - EXCELLENT!!! (fwd)

FS: WONDERBAR RADIO FOR '57 CHEVIES - EXCELLENT!!!

www.ebay.com item 238999733

FS: Radio for a '57 Chevrolet Belair, 210 and all related
models. It is in near-Mint condition! It has very recently been
totally restored electronically. All new circuits, capacitors,
tubes and totally checked overy by professional radio repairman.
The chrome is in very excellent condition - extremely shiny!
Everything works on this very rare radio.
All metal is in
really great condition. No rust. All checked out and ready to play
in your classic car. ..
I can send along the receipts I have for all work done. It is still in
original box from repairman. Due to the age it i sold AS IS. However, if
it fails to work when
installed it can be returned to the repairman to be fixed at no
cost except for parts.
Chrome is truly excellent but it does have a couple of tiny 'specs'
on the knobs. No fading at all on the chrome. Very shiny. Black
buttons are mint. Needs nothing! Tops of tubes have a nice shiny
chrome on the glass. These were not chrome plated but are a natural
part of many tubes. Lettering on "Wonderbar" switch is perfect.

1051. Tek scopes for sale or parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-17 00:00:00 UTC
From: Tracy Nelson <tnelson@fast.net>
Message-ID: <38839DA6.BBAD3C72@fast.net>
Source record: 72747

$FREE -- Tek 535 o-scope. A streak of phosphor is missing from the display and there may be other things wrong with it. Comes with a Jetronic plug-in (1A equivalent?) I was going to restore it, but I have more radios than time, so something has to go.

$50 -- Tek 310A. Good condition, has trouble with AC waveforms. Probably easy to fix, but I got one in much better shape so I don't have the incentive to dig into it.

These scopes are in the western suburbs of Philadelphia. Drop me a line if you're interested.

I have a mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in
original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. NOTE: Please REMOVE the "98" to leave "worley" in my email or call 334-347-5281.

There should be a screw or rivet with a solder lug on the side of the
chassis. Barring this, solder the ground to a lug that goes to ground on
the rectifier or the 6V6s. I've seen them wired all three ways as well as
the way you had yours originally.

>
> 2)

> Thanks alot
Radio Shack has .01/1000V disks that work well for this. The originals were
..01 at 600 I believe but I wouldn't replace them with anything under 1000V.

Their purpose is to filter out RF coming into/leaving the radio thru the
power line. Very important if you're running it with a transmitter, or
using it in a classified government facility but not critical otherwise.
Still, as long as you have it open it would definitely pay to replace them.

Hi All,

I have had another boatanchor week that was too good for my own good. Any true lover (read addict, ... I can stop anytime I want to...) of the hollow state knows what I mean, I am awash in projects now but the opportunities cannot be passed up. I came home with a HT-32A and SX-101 Mk I Combo, my first Hallicrafters!. The HT-32A is in great shape and even had the original manual. I am sure that it will be a delight to put on the air. The SX-101 Mk I is in reasonable shape but is missing the BFO knob and the big tuning know is pretty cheweed up. Other than that it looks complete and should be a great radio. Gear drive VFO looks very interesting. The BFO shaft the threaded shaft of a slug tuned inductor and is smaller than a conventional shaft. It probably had something like +- 3 kcs markings on it.

Anybody out there have the BFO know and or the tuning knob? As always thank you in advance for all the help. I do love the smell of tubes at 0230 in the morning.

Rob

1063. Info Wanted: RBW-3 WW-II Panoramic Receiver Adapter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-17 00:00:00 UTC
From: Rob Dunn <dunnr@ix.netcom.com>
Message-ID: <860s6b$u3s$1@nntp1.atl.mindspring.net>
Source record: 72759

Hi All,

In addition to an the pair of Hallicrafters that followed me home today Dave at Radio World fed my addiction again with a beautiful piece of WW-II radio gear that I have no information on at all. The device is a "Panoramic Radio Adapter" and looks like a pan scope display of some sort. I hope to integrate it with my R-390As. The label describes it as thus:

RBW-3 S/N 17
Panoramic Radio Adapter
Equipment Consists of Accessories and the Following
CWF-55187 Panoramic Radio Adapter
Navy Department
Bureau of Ships
Warwick Mfg Corp.
Chicago, Illinois
Contract NXsr 90839
Accepted by Navy 11 6 45

There are three SO-239 UHF connectors on the back and a hacked-in power cord.

On the front are several trimmer pot adjustments and the following controls:
Blanking
Sweep (0-1000)
Center Freq
Gain (0-9)

Anybody have any information or possibly a manual/schematic? Thanks!

Rob

1069. Difference between Hallicrafters S-118 Mark 1 and 2?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-17 00:00:00 UTC
From: adamant316@aol.com
Message-ID: <20000116200130.22315.00000205@ng-bg1.aol.com>
Source record: 72801

I am the proud owner of a Hallicrafters S-118 general-coverage reciever. I have had the radio for around 5-6 years, and this is my first (and only, so far) shortwave radio. I have used it to listen to multiple broadcasts (using nothing but a small [12 inches long by 2 inches high] loop antenna designed for AM), including an English station in Czechoslovakia and the Collins Collectors Association's AM Night (the first advertised non-AM broadcast I have ever listened in to). Until a few months ago, I did not know that there were two versions of my radio, the Mark I and the Mark II. The only differences I've noted was the tube lineup (the Mark II substitutes a 12AV6 for the 6T8A) and the bandspread dial (the Mark 1 dial goes 0-100, while the Mark 2 goes -50-0-+50). According to these criteria, my S-118 is a Mark 1. Are there any other differences? Any help would be greatly appreciated.

I hope that you are kidding about the mineral spirits. I have found mineral oil in drug stores, by the quart. It is not as effective as transformer oil...xfmr oil can handle 1KW for about 10 mintues vs. seconds for mineral oil. However, for power up to 400 watts, both products share the same basic cooling capability. I have used mineral oil for many years.

As you know, if the equipment meets Part 15 emission rules,
Ramsey is right.

>want to and do work CW, that is great and I wish you every happiness. I feel CW
>is like the crank on the old car, might come in handy some day and some may like

But then, so is AM or SSB for that matter. Cw is enjoyed by some.It is
a whole lot reliable than AM or SSB. I can communicate by CW when
ssb or am is dead. I don't think that the fight is beween Amers/SSbers
and CW. It is just change. No matter what the FCC did, people would
get pissed. I was a ham when incentive licensing came about in the
60's. Everyone was pissed then. I think the whole thing will blow away
in a couple of years, but I said that when incentive licensing came
about. I know hams who are still pissed at the FCC for incentive
licensing.

>to use it for the novelty of it but a crank (CW) is not for me. I know of

Ham radio should be inclusive. But cw has been a traditional part of
testing. This is a new idea and change, good or bad takes time for
people to accept. On both sides.
Although I am a CWer (Fists 6564), I know that a whole lot of hams
don't like cw. I respect them for that. Frankly, if I want to talk to
a ham who uses only ssb, I will use ssb. Friendship is more important
than modes of communication.

>many technically minded individuals (computer and network engineers) that
>would love to become hams, but with a career and family just do not have time
>to learn something that they are not interested in and do not foresee using
>just to get a ticket. Before you say it, I did my 5 wpm for my novice ticket

Although I am an exra class, I know many intelligent good hams who
could not get it up to 20. I think that the changes are beneficial to
ham radio.

>As for the CBer's, OM give up your prejudice. How many of you stiff necked hams
>WERE CBer's? Granted there are many on the 11 meter band that I would NOT want

Here is where we differ. Although 3950 + or - is really CB, I get
disgusted when I turn to the CB bands. With filth/death threats/
hatred/drug dealing, I don't think ham radio could survive it.
I would have no hesitation of letting my children (now grown) to
use ham radio unsupervised. But I would never let children go on CB or
Internet without my presence. Also, it is nice to have friendly chats
without hatres/swearing/deaththreats/drunks/etc. The poor practices of

CB really detract from communication and friendship. I used to have a
CB License in the 70's. although I have a CB, I have little use for
it.

>

>happy.

I think the net has a lot to do with it. In the 50's my family had
trouble getting reliable phone connections from California to
Pennsylvania. Nowadays, I get on IRC and chat all over the world.
Maby ham radio has to be continously reinventing itself to survive.

I would love to see CW as a requirement abolished, BUT make the written exam on the extra class license 3 to 4 times more difficult. Hey for the really progressive no code hams lets make a class called "Engineer". The test would contain the old FCC first class test plus some computer and digital transmission theory. The prize? Some really choice 100 Khz or more of spectrum in each ham band exclusively for their use and experimentation. The benefits are obvious and the whiners cannot complain about them not earning their ticket when this new class could have them for breakfast. Let's really separate the men from the boys. Any takers?

I agree with you on many points. It is refreshing to see an intelligent response
to a post such as this rather than a flame or nonsensical babel. I admit that
in many areas and it seems to be more so in larger metro area rather than in
rural ones that CB is a sewer. I work in Cincinnati and there is NO WAY
I would let my daughters listen to the 11 meter band. There is a repeater
in Cincinnati 145.350 that has the most fowl mouthed persistent jammers
I have ever witnessed. The people that hang out there are for the most part
good hams, but I wouldn't let them listen there either. It makes me sick
because I know that some of the jammers are hams from other repeaters.
The jammers just can't stand it that the users are having a good time
chewing the rag. They think that a good repeater is a DEAD one.
Dead silent. Why have all this hardware and money tied up if your not
going to use it? The trustee of the repeater is doing all that is possible to end
this and it is
starting to help. My contact is with mostly small town CBer's who just want to get
together and have some friendly, nice conversation. These are the people I
would like to see recruited into the hobby. In the county I live in many
good hams were recruited from the CB ranks. They wanted something
more. The CW requirement keeps them away a lot of the time. The hobby
needs more engineering types to invent the next communication modes
and more numbers in general to keep the spectrum wolves away. Something
has to be done or amateur radio will be dead in a shorter time than we might think.
All it will take is someone with deep pockets.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

Dick, tell us, according to Part 15, in which ham bands may
unlicensed operators use low-power transmitters. Certainly not
on HF.

Hello from Texas,

I'm looking for 1950s and 1960s vintage Raytheon CB
radios and Walkie Talkies for my budding collection.
I'd prefer sets that are cosmetically nice, as they
will be on display. Working condition is not as
important, but working sets are preferred. I could
also use owner's manuals and shop manuals.

Whatcha got?

73,
Dean / K5DH / k5dh@raytheon.com

Does anyone know of a source of aerosol paint cans of light gray color
suitable for re-painting the front panel of a Racal RA6217 receiver?
My local hardware stores here (in Southern CA) carry Zinc Chromate and
gray primers, but no suitable finishing colors. The match does not
have to be exact, in any case the colors used by Racal vary from model
to model, and country to country.
73 all,
Dan AC6AO G3NCR

1098. Question re: checking paper caps

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-17 00:00:00 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <38833D3E.8AC12E3@erols.com>
Source record: 72830

Question for someone who's already been there: I've been re-capping some of my older receivers and have come across a phenomena that I can't fully appreciate. Most (95%) of the old wax/paper caps I pull out check "bad" on my digital C-meter. That is to say, the readout appears to "search" for a value to settle on and/or appear to continuously bounce between 3-4 values, none of which are typically even near the rated value. Again, maybe 1 in 10 check out just fine. Having said the above, if I sub with a new orange-drop, etc., they all check out fine (hope so!!). Can someone explain the "failure mode" of the old paper jobs? I also have to note that in no case (yet) has one of these receivers been inoperative, so the caps were probably not shorted, at least. Thanks.

I dunno, Jeff...Maybe you'd better read some of Ed Hare's
stuff on the Part 15 "wireless modem" problem he's been
working on. They transmit far greater distances than most of
the little bugs, and they sure are on HF, and legally so.
But I'd guess that Ramseys stuff is on VHF>. Why put that
stuff on HF? That just complicates the antenna problems
inherent with such gear.

Krylon dove gray. Try Home Depot, Lowe's, Ace, etc.

Alternatively, some auto paint dealers can custom-blend a color
and fill a spray can for you. This is not cheap, but it's do-able.

Off subject a bit, but the awkward truth about Part 15 devices is, if WE interfere with them, it's held to be our fault; if they interfere with US, we are told to shut up. It's in our interest to see them kept off the Amateur bands.

Standard 19" panel, 8 3/4" opening heighth. Round corners, grey in color, as new. Collapsible, bolts together. Not sure of brand. I had a GPR90 in it. $100 or possible receiver trade. Email direct if interested, thanks.

1106. help on some SX-28's wiring

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-17 00:00:00 UTC
From: emanuele_girlando@yahoo.com
Message-ID: <8604bd$v27$1@nnrp1.deja.com>

Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

1)
The filter electrolytic caps (C48 and C49) within my SX-28 are
connected to GND only by mean of metal clips fastening them to the
chassis. As they are not original I don't know how they have to be
connected to restore the original layout.
Can somebody owning an SX-28 have a look inside it and confirm how they
were originally wired to GND?

2)
My SX-28 is missing C51 and C52. They are connected to the PRIMARY
leads of the power transformer, that is directly to the HOT and NEUTRAL
leads of the power line input. Question: are they needed? Why? Are they
safe? Do I have to reinstall them?
Thanks alot

When asked if it would be considered intentional interference
to transmit on top of illegal 10m "outbanders," the FCC responded,
"It's impossible to interfere with an unauthorized emission."
In other words, Aaron, they don't consider it as "jamming" if
the signal doesn't belong there.

Rustoleum "Dark Machine Gray" Which is actualy quite light and a near
match to Hallicrafters paint is perfect. I find this paint to be a close
match to nearly everything gray. I even painted one of my Cats this
color and it looks great too! Best source, Home Depot,

NOTE: This is a new listing. If you contacted me before about another T/R switch, please contact me again; I've lost some email files.

Have just found (in a local estate I'm helping to liquidate) a VERY nice E.F. Johnson model 250-39 T/R switch. It is Collins-scale excellent cosmetically and electronically. It is complete, looks great, works great, and is ready to go. I can sell it for $145 + $5 to ship. Tks es 73!

Hello, I have six total, all are GE JAN. Guaranteed to test good on arrival, you can send back for 100% refund if not up to liking, less only return shipping..I would absorb initial shipping cost. (in USA only). These are priced well below market to move fast.
I have checked them with an ohmmeter only. As described below:

3 with full, shiny getters, 60.00 ea. look very low use if any.
1 with 40 % getter flashing, 35.00
2 with faded getters, but internals look very clean, 20.00 ea.

Shipping 3.00 in continental USA.
Regards,
Joe Pratt, Tubecntral@aol.com

1126. Black Wrinkle Experiences

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-18 00:00:00 UTC
From: "George R. Gonzalez" <grg@umn.edu>
Message-ID: <862iam$pr7$1@news1.tc.umn.edu>
Source record: 72658

If you're into real old boatanchors, you know all about old black-wrinkle panels.

By now a lot of them have turned bad, with wear, scratches, chips, rust, and general gray scuzziness.

Well, there's a solution! Krylon has a "black wrinkle" paint that can work WONDERS!

I just redid a boatanchor front panel and case, and although it was a bit of a hassle
this first time, it turned out sooooo gooood, I'll definitely do
it again with the next black wrinkle panel I come across.

(Several caveats: you may not like a "perfect" super-fresh looking black wrinkle panel.
Nowdays it stands out, as there are darned few originals left in this good a condition.
It's the eternal dilemma-- do you want it to look "new", or "in super shape for
something 60 yrs old". Your decision. In the end if you don't like the "new" look
you can easily rub in some grime and age it back into any age you desire!)

Another caveat: if the panel has engraved lettering, you'll have plenty of extra work
to do to restore the lettering. Be prepared for lots of detail work.

So here's what you do: Get TWO cans of Krylon "Black wrinkle". You have to apply this
stuff THICKLY, so one can will only do about a couple of square feet. You also have to
apply it on a tight schedule. You don't want to run out of one cans halfway thru the job,
as you have to apply the next coat within xx minutes.

You probably want to strip off the old paint, then prime the panel with some gray primer.
A messy job. Have lots of rags handy. 3M's "safest stripper" works well on old black
wrinkle paint.

Now you need a warm room, preferably with good ventilation. Winter is a poor time to
do this as the paint gives off lots of acetone and other bad fumes. If you start getting

dizzy , GET OUT! The fumes kill brain cells. If you are into boatanchors you're already missing
too many....!

Lay the panel down flat. If there's any doubt, use a level! You're going to be spraying on
several THICK coats, which will tend to run or sag toward the low end. A level surface is
best. If you must spray a vertical surface, spray on twice as many coats, half as thick.

You're going to spray on THREE THICK coats. Don't be fooled-- the paint has excellent
thick pigments, so even a thin coat will look really black. But it won't wrinkle up properly.
On a flat, level panel, I found I could spray on about three passes at about 10 inches away.
This was a THICK coat, thick enough to sag and run if the panel wasnt perfectly horizontal,
but thick enough to not spill over the edges if the panel is lying flat.

This is trickier than it sounds. The coat has to be of uniform thickness, and I don't
mean a military uniform! It may look evenly black, but it can still be thin in spots.
One way to aviod this is to make complete, systematic painting scans, just like a TV
raster. Start at the upper left, go across, then back to the left, then back til you
reach the bottom of the panel.

After the first coat, wait about 5 minutes for the coat to set a bit. Now you'd think this
would be enough, but Noooo-- it definitely needs a second coat, then another 5 minute
wait, then another thick coat. Trust me-- I first did two coats, thinking they would be enough.
Nope, I only got wrinkling along one edge (I hadnt set the panel perfectly level, so some
of the paint had run over to the lower edge).

You won't see any wrinkling going on during this 15-minute spray-fest. It takes hours
for the paint to set up and wrinkle. Just leave it alone, preferably overnight. Watch out!
The paint can look quite dry on top, but can still be smooshy underneath!

Now if you didnt spray enough, you may not get any wrinklinig, or only wrinkling on
the areas that got a thicker coat. This happened to me. The first time I didnt get any wrinkling,
due to having applied only two thick coats. Then after the third coat,

there were
a few spots that still didnt wrinkle as I hadsnt sprayed a few areas enough.

I was able to rescue this panel by spraying on a fourth coat the next day. The wrinkling
looked really awful, as the new coat caused the other coats to double-convulse and
wrinkle-- but by the next morning all the coats had adjusted to each other and I ended
up with very good wrinkling.

Another possible problem-- you're likely to misjudge and spray too much sometimes,
causing sags and runs. Don't worry! I think one reason black wrinkle was so popular
was that it's very forgiving of errors-- the wrinkles can hide lots of mistakes. In the case of sags,
these are often still soft underneath, even a day later. If you have some acetone you
can apply it with a q-tip and smoosh the sag around until it's flat. it won't be wrinkly,
so you'll have to apply another coat of paint. Don't worry! The more the merrier. if you don't
have any acetone just spray on some more paint and use a q-tip on it to smoosh down the sags.
Don't worry how it looks, when the wrinkles develp they'll cover up all sorts of mistakes.

Be sure to let the panel dry for several days. The paint is still soft under there and it won't
tolerate much handling and certainly won't tolerate having nuts tighetened onto it.

You can allegedly speed up the drying with heat lamps or an oven. I'd be careful and not use an indoor oven! The fumes are just awful.

So to repeat: put on LOTS of paint! At least THREE times! On a LEVEL surface!
With lots of ventilation!

(the spray can lists most of these suggestions-- for once, read and FOLLOW them!)

you can get the paint at the bigger hardware stores, or from Antique Electronic Supply,
and probably other places. It's only $4.95 from AES for a big can. Of which you'll
probably need two for anything bigger than a Command Set.

Regards,

-- George

1127. FS:Electrolytic capacitors

Newsgroup: rec.radio.amateur.boatanchors

For Sale: New, never used rack cabinet. Ideal for that bigger home brew project, repeater site cabinet, or for mounting your equipment in. Takes standard 19 inch panels. Cabinet is approsimately 4 feet high, 24 inches wide and about 26 inches deep. The mounting rails inside are fully adjustable and there is a locking, ventilated rear door. I have all the hardware except the key for the rear door. Asking $100. Can deliver in the Toronto, Ontario area but prefer pickup or maybe we can make some other arrangement for delivery.

1129. FS: 2 Volt/75 Ah flooded cells excellent condition

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-18 00:00:00 UTC
From: toneri@home.com
Message-ID: <3884d5ab.2419266@news>
Source record: 72661

For Sale:

I have a quantity of 2 volt 75 ampere hour flooded cells available. They were removed from service as a backup power supply after only one year of service. All are up to full capacity. Each cell is approximately 15 x 4 1/2 x 7 1/2 inches and weigh about 20 pounds each. 6 cells in series will make a great 12 volt 75 Ah battery. These cells have a normal service life of 8 to 10 years but will usually last longer. Also included are the bars to connect the cells together and protective covers for the bars.
Can deliver in the Toronto, Canada area or you can pick them up or make other arrangements,

Asking $20 CDN per cell

Laughing my ass off, Gary. Nice job on the new VEC testing pool. I
knew they could find a way to dumb down the written.
Now, W5YI, ARRL, and Gordon can all get more $$$ since
EVERYONE will need to buy the test answers before sitting for the
exam. Kinda like scoring 600 on the SAT if you can manage to
get your name bubbled in correctly!

Dear colleagues
usually deep into heavy boatanchors I have a nice brown leather tube
Zenith T.O. which lacks the light brown log book cover (light grey on
the standard black 600 series).
Any offer for such a thing is considered, please mail your offer to
<hb9aik@yahoo.com>. Yes, I know they are rare but I keep on trying...
Thanks for any answer!
Ulrich.

THAT *myth* is rapidly becoming an upper-level old wives tale!

As much as SOME love to quote such folklore as "truth", we have YET to see a SINGLE instance or actual call letter attached to such claims - will YOU be first?

This is not to say that such incidents DON'T happen - merely that it is FAR more rare than those looking for support of eased exams would LIKE us to think... Hell - SOME here would love to suggest that nearly ALL general or higher class licensees obtained their certificates by fraud - guess it makes THEM feel better when THEY can't pass legitimately themselves...

Source record: 72673

Every manual for amateur radio equipment made by Collins Radio post WWII to 1980 is now available on a 4-CD-ROM set. The 4 volumes are available individually or as a group. Vol. 1 - Receivers, Vol. 2 - Transmitters & Amplifiers, Vol. 3 - Transceivers, Vol. 4 - Accessories, VFOs, PS, etc. In addition to the manuals all factory service bulletins are included. Where Collins made a large number of multiple editions of the same item, such as KWM2, we have included the first, last and somewhere in the middle manuals so that you will have one fairly close with factory mods shown for your specific equipment item. Requires PC running Windows 95 or higher and uses an Internet browser for viewing. You can view, rotate, enlarge and print a page, group of pages or entire manual. This series became available due to Rockwell Collins hams being interested in archiving all of the manuals in digital form for posterity. Rockwell-Collins lent the original manuals from their library for this project. For further information, please call 214-358-5195 or look on the internet at http://www.radioera.com/collins_announcement.htm

Thanks for reading - posted for those who are not aware of the availability of this resource.

Hi Gang,

I acquired one of these old Bird wattmeters (also known as the ME-11U) but, it came without the diode holder and dummy plug. I would appreciate any information about how I might find these parts (preferably with the attached chain). Do I need to write to Bird directly? Please Email me as I do not check newsgroups on a regular basis. Thanks.

> onto someone else. RFriffraff

Let me first respond to the off list message I got from RFriffraff that was a personnel attack. If thats all you can say then you belong on CB

Amateur Radio is undergoing a great deal of FCC enforcement and like all hobbys we have a small percentage of bad apples in the bunch. The difference is that the bad apples have not become the norm for ham radio as they have on CB radio.

Yes, I was a CBer from 1968 to 1970. I got tired of the crap that prevented simple and pubic conversation. I had to work for my Novice ticket and I do hate code, but it was the price to pay to get into a group that dispite the attacks is above average and way above average when compared to the "outlaws" on CB.

I cannot begin to count the number of CBers who have asked me " who would care if I just got a ham rig and operated" I offer help with the material to study and by teaching classes, but I would turn in a bootlegger in a New York Minute. I have also turned in the CBer with the Henry 3K amp down the street. He was not happy and he will be paying for his violation of the law for a while. I will also turn in fellow hams who cannot follow the rules we live by. There is the difference between ham radio and CB. Standards.

For RFriffraff; Got a problem with ham radio, don't get all upset about a few hams who get caught when we hold them to a standard that 90% of CBers could not meet. As for the off list comments, you have my response, measure up or shut the heck up.

1155. Re: Question re: checking paper caps

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-18 00:00:00 UTC
From: Bonita Lee Geniac <bgen@wdl.net>
Message-ID: <3883B460.A7D19E67@wdl.net>
Source record: 72767

All old paper caps develop leakage internally and will check as leaky on the proper test equipment, the phenomenon of making the digital cap tester hunt for a value is due to the leakage resistance of the capacitor. Why are you bothering to check old caps with a digital c-meter? The value of paper caps usually doesn't change very much, and that is not the parameter you need to test for. Most paper type caps made before the mid 1960's will be leaky now and should just be replaced. The epoxy dipped ones that came into common use about the mid 1960's such as orange drops etc are far superior to the old wax paper types. A good leakage tester puts the full operating voltage across the cap and then measures the leakage. Sprague Tel-Ohmikes like TO4, TO5, etc are great for finding leaky caps and relatively inexpensive at swaps etc. There was another method discussed in several magazine articles back in the 1950's-1960's that reauires the use of a VTVM with 11 meg input resistance and a B+ supply of about 300 volts. One end of the cap in question is connected to the B+ and the other end to the VTVM, with the common lead of the meter connected to B- of the power supply. After several seconds for the cap to charge, a relatively low voltage reading should be observed on the VTVM. Anything higher than about 1.5 volts after the cap is charged indicates that it is too leaky to use in a coupling circuit. Bypasses are OK up to about 5 volts when tested this way. Comparing a brand new modern cap using the same test you will find they all check considerably less than 1 volt. This method will only work with an 11 meg input VTVM, it won't work with digital meters or VOM's because the input resistance of those is too low.

From: novatech@eskimo.com
Message-ID: <860ja4$21i$1@eskinews.eskimo.com>
Source record: 72770

I am looking for a complete data sheet on tube 3A8 (triode-pentode-diode),
aka VT-149.

My data books have shortform data on it (RCA RC-15 and 17, among others)
so I know the basic specs and pin-out, but I am interested in a copy of
the full data sheet, curves and any application notes. Tube Lore lists
it as the same as 1H5+1H5, whose data sheets I have.

I'd like the real thing. Send email if you have a something you can copy
for me.

TIA,

Steve.

I would like to buy the matching speaker for the NC-183D receiver.
Mike.

1167. Re: Question re: checking paper caps

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-18 00:00:00 UTC
From: Reed Park <reedpark@nbnet.nb.ca>
Message-ID: <3883F0B9.C54D2252@nbnet.nb.ca>
Source record: 72779

To re-cap, or not to re-cap. That is the question.
Personally, I don't change a capacitor, unless it is bad.
I operate some vintage military gear that was built in 1943,
the same year that I was born. I have only had to change
one of the capacitors in that unit, and that was a 32 MFD
filter capacitor in the power supply. The rest of the transceiver
has never had a component changed, other than a couple of
the tubes.

If it ain't broke, don't fix it was a very popular and truthful saying.

By the ay, I have three of these WW II transceivers, and no
components have been changed, other than the already mentioned
couple of tubes.

Oh, am I going to get tons of flames from you people that just change
capacitors because you like the smell of solder flux.

Regards
Reed (retired technician after 34 years)

Tram D201 in good condition, Unlocked VFO and manual $275

Johnson Messenger 250 Base, Astatic Golden Eagle D104 Mic like new condition in origianl box, $300.00

PDX400 eight tube 10 meter base amp, Brown with gold knobs and Browning Eagle on the front, looks very nice with a Browning. 700-1000 watts PeP, in good working order. $280.00 SOLD

Cobra CAM 88 Tube 23 channel base Working with a copy of the SAMS, no Mic but I have the hard to find mic connector. $70.00

Siltronics Model 90 -6 VFO, Good cosmetic and working condition $70.00

BBE 411 Rack mount Sonic Maximizer, Rack mount, 1/4" in and out, will work for voise or musical instruments $90.00

HomeBrew Meter, 20/200/2000 Watts. Reads forward and reverse wattage. Made from a
Goldline coupler and Large scale meter $25.00

ParaDynamics 3 Way, large scale meter, CB meter, switch between Power/Modulation and SWR. $40.00

Demco Modulator in good working condition with a Fentone Broadcast Style Dual crystal mic head mounted on a D104 G Stand. Works great, Nice smooth audio $200.00

Crown IC 150 Stereo Preamplifier, with paperwork $150.00

Motorola UHF Power amplifier Model N1275A 450-470 Mhz $50.00

Yaesu XF-32A SSB Crystal filter for the Yaesu FT101 $35.00

Bird 50-125 Mhz Slug, 5,000 Watt Peak/1,000W RMS $40.00

Bird 50-125 Mhz Slug, 10,000 Watt Peak/1,000W RMS $40.00

Realistic Navaho TRC 30A 23 Channel Base in good condition $40.00

Realistic cb Phone $25.00

HomeBrew 10 meter 3 tube amplifier, Uses 3 military 24 volt filiment versions of the
6146 tube (they are available from RF parts at a reasonable price) Fresh tubes ,
adjustable bias, adjustable input SWR tuning, Load/Plate/ SSB/AM 150 Watts + $150.00

Yaesu FTdx 560 10-80 meter SSB/CW transceiver, Excellent condition, Plastic still on the face, All tubes in excellent condition, Very Clean, with copy of manual $250.00

Gonset GSB 101 amplifier, uses four 811 tubes, Good condition, No internal TX/RX switching, Must be done externally using a Dow Key relay. Works excellent with copy of manual. Pick up only in So. Ca. $300.00

Icom IC230, 2 meter mobile transceiver 146-148 Mhz FM, intermittent VCO, comes out of lock easily, No time or interest for this project $30.00

Midland 79-290 Removeable face 40 channel SSB/AM mobile CB. A-F bands, Dual 2SC1969 final design $120.00

Palomar 225 Blue face amplifier in good condition, Set up class C $90.00

Penetrator 150 10-40 meter solid state mobile amplifier, with band switching and filtering, Class AB1 with removeable control head $175

Galaxy DX55 40 channel AM/FM/CW Export radio with extended coverage, Freq. counter, Connex Echo, 5 tone, Lots of swing at over 20 watts output $150.00 in great shape with original box.

Pics available for all items, Prices do not include shipping.
Items ship UPS ground after receipt of MO

I have a nice Collins KWM-1 transceiver, I bought it from a friend. It has no 516F-1 power supply. No modifications, and original paint, and knobs. The front panel is very nice Serial Number 1007. The interior is also nice. The paint is still very shinny, and looks great. The transceiver is untested, and has a RP Electronics RPC-3U Speech Processor made for the KWM-1, with manual...$750.00 plus shipping

Ph/Fax (310) 670-6969

Thanks Leo KJ6HI

You know it would be interesting to take a poll of all hams anonomously to find out how many 'cheated' to get where they are. I know many Extras here in Maine that have cheated the system with waivers and some that cheated on the 5 wpm test because the team used the same tape over and over every session. One man was on the repeaters asking if you could get a waiver for the 5 wpm and whiningbout his ears had problems and the next month he was an Extra and he doesn't know an E from a T, but he got his waiver!

1176. DX FANS LOOKING HELP.....

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-18 00:00:00 UTC
From: Kivi <bank@takas.lt>
Message-ID: <861ogd$16r4$12@trimpas.omnitel.net>
Source record: 72788

Dear Ladies and Sirs,

Hello! At first we want to give our best wishes to
Yours dx radio organisation and also we wish You all the
best in the future!

My name is Arunas Bagdonas. I a 28 years old lithuanian
man, I live in Lithuania,in Europe. I am a PC and Multimedia
student, and I am a senior manager of our established "DX
Club". My friends students (this Club members) are DX'ing
fans in Lithuania. But we have a problem : we have not the
information about frequencies and radio stations, dx news
etc. who is very valuable for us, students and DX radio
lovers...

So, we (our Club) asking Yours help : please,
help us, students, and if You can, send us free
shortwave Utility stations (air, marine, military)
frequency list (book orCD-ROM) and 2-3 latest
issues of Yours country DX magazines, please....

Please, do it for us, lithuanian students, maybe like a
humanistic aid !

We hope, that You will help us and send us frequency list
and dx magazines !
We (8 students) will wait the answer from You !

Our address:

Arunas BAGDONAS
c/o DX Cl.
RAMYBES 5-37
LT-4930 ANYKSCIAI
LITHUANIA,
Europe

Best greetings from Lithuania !

Sincerely Yours Arunas

1178. FS NOS WWII era tubes.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-18 00:00:00 UTC
From: JOHN SEIDTS <jkis@erols.com>
Message-ID: <861p4c$63j$1@bob.news.rcn.net>
Source record: 72790
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

Here is a list of the tubes I have. All are NOS, some in the box or wrapper. Condition is good to fair to poor. These were stored in a barn for almost 30 years before we cleaned it out. Sorry, no other radio items. Best offer takes them, interested in trading for WWII vehicle parts, manuals, accessories. No offer? You'll see them on ebay, listed individually. Photos will be available, at http://www.astory.com/militaria/tube.html, but not until tomorrow.

These have their boxes
RCA VT-109
RCA JAN 923 DSC
General Electric JAN-CKR-34 VT-54
Tung Sol JAN-CTL-6N7 G T/G
Lytron Radio and Electronics JAN-CHY OD3/ VR150
US Navy Type CHS 30
Sylvania Tube AN-1LD5

These are out of their boxes, but shreds of the originals were found around them- too poor to preserve.

Narco Transmitter Output Filter VTP-34
RCA Radiotron marked 810 on tube body, SC 223 A in stamp on base
RCA JAN CRC 829B
Collins on base, 811 stamped on tube body
Sylvania JAN-CHS-811 VT-217 (looks same as last one)
General Electric, Stamped on tube body VT-4C

Perhaps the numbers won't suit your purpose - but the day after the Columbine incident, and mental-case AUTOMOBILE driver crashed thru a pre-school fence purposely in an admitted effort to kill as many "innocent children" (his words!) as he possibly could - as I recall, he managed to kill one and injured many others. For SOME strange reason, our national media wasn't NEARLY as interested in covering that AUTO related murder as they were the one involving guns... Our local paper DOES ocassionally cover stories where alcohol and autos (2 of our country's GREATEST killers) were directly blamed for some deliberate attempted murder, as one driver tries to run over another in a fit of alcohol-induced rage...

Guess we need to work HARDER at car-control and banning...

A *LIE!*

Or at LEAST an intentional misrepresentation of FACT!

Those kids didn't "get guns from their parents", they BROKE INTO and STOLE them - one from a grandparent! LOTS different than the implication that the parents GAVE the kids the guns! One of the kids WAS an avid hunter - but the guns he used were kept locked when not in use.

If you are going to demonize GUNS used in these incidents, how about CARS? Should the PARENTS also be held responsible for the deaths and injuries, as well as property damage caused by their children? Why not - those CARS kill as many and MORE "innocent kids" than hated guns do! AHHH, but YOU own, drive and enjoy CARS - so aren't ABOUT to place restraints on THEM, ARE YOU!

Nothing like circumstantial ethics... Ban and demonize the stuff that WON'T affect ME, but DON'T touch the stuff *I* have any need for or interest in...

Hello to all...

Heathkit SB-line stuff for sale: UPDATED LIST

- Cabinet: SOLD

- SB-102 front panel: overall nice, has minor chipping on the top edge (where the lid closes onto it) and a "ring" worn into the paint from the DRIVER tune knob being too close to the panel. The knob hides the mark, however. This panel is good enough to replace a beat-up one or one that's been drilled. $10.oo plus shipping

- Knobs: I have a bunch of the smaller knobs (but no VFO knobs) available. Condition ranges from good to great. $1.oo each plus shipping

- Lever knobs: SOLD

- Panel meter: The face is "history", but the movement is guaranteer good. $5.oo plus shipping

Message-ID: <s8ci6j7peh6177@corp.supernews.com>
Source record: 72621

Must make room for incoming.

I have an SX-100 for sale. It has some wear on the machined-metal eustachion, reducing its value considerably. It has a crack in the S-Meter cover. It performs VERY well, and is a great radio to have in the shack. It has pleasant audio and is a smooth band cruiser.

It does have the crystal calibrator, is shiny,clean and looks nice, with all the original knobs - but is NOT collector quality. Notch filter works. There is an intermittant problem associated with the S-Meter function (rapping the AGC tube fixes it, so certainly minor!) Manual copy included.

First $185 plus UPS shipping/insurance from Indiana (US & Canada only, please.) I will carefully pack and double-box it.

Thanks,
Brad, NB9M

Source record: 72623

Hi all,

I have a clean Heathkit HW-101 and HP-23B PS for sale. Cabinet has a few scratches, not through the paint but bottom has a couple through the paint. Front panel is perfect, meter and knobs are in good shape as well. Radio works fine and has newer final tubes. Both original manuals (radio and PS)are also included, only mod is mic plug has been changed to standard 4 pin. I have the original plug and it can be switched back if desired. This is the nicest one of these I have seen in a long time, looks well built and I have made a few contacts with it. Power supply is in great shape as well. 160.00 + shipping from 60650, pics available on request.

73,
Kevin

Kip Kinkel's father bought him a Glock pistol and a Ruger 10-22 rifle (including a 50-round rotary magazine). The kid was supposed to pay his dad back over time, but in the case of the Glock at least he never did, and never would have had the money to buy it himself.

Yes, parents should be treated as accessories to the crimes their children commit when it is shown that they abdicated their responsibilities to ensure that their kids are mature, stable, and intelligent enough to handle whatever--guns, cars, matches, gummi-bears. This means that they keep up with what is going on in the kid's life, his emotional and mental state, their friends, school performance, etc. It also means proper instruction and limit setting. You know, just like parents used to do. Having done these things, that is all a parent can do, or can be expected to, and then should not be made to answer further. When a child misbehaves so extremely as to cause the death of another, I think it is reasonable to suspect that something is very wrong in their home life, and reasonable to investigate those circumstances. In so many cases kids do wrong, and it comes out that their parents did nothing to prevent, monitor, or intervene in the behavior. Parents have a responsibility to instruct, supervise, and control their children. We take custody away from parents whose neglect results in harm to their children. We should also take action against parents whose neglect results in harm to others. It is a reasonable standard of accountability and one that schools, employers, and government agencies are already subject to.

Hi Yall...Check out the website..... GIOVANNINI ELETTROMECCANICA - HF ANTENNAS and Look at the D2T.....It does exactly what they say or better, I have one , I know...and now Im going to work for them, so if you know someone who doesnt ham because of "antennas" send em to me and I will try to help...also have some contest winning DX Verticals, and interesting lite weight masts...all available very soon in this country at prices much less that quoted on the web page now...Got a friend with a store? Do him a favor and turn him on to me...I will fix him up!! BTW...for a small beam for 20-10 PLUS 6 and 2 ssb...this D2T is worth the money for that alone...73 Murray

My previous experience in that area usually centered around Coors Beer on draft, but that was a long time ago.

As I look at my Y2K QSL card from WWV, I note that they are located on 2000 East County Road 58 in Fort Collins. I suspect they do accept visitors if you give them a call.

I think there is still one decent sized radio store in Denver, but can not guarantee that. There was also one up north in Cheyenne. Neither is too much of a drive from LL or FC.

You can always take a 2-Meter Rig and work DX from one of those 10K plus passes or peaks.

QST lists a HamFest in Brighton, CO (nr Aurora) on Feb 20th.

Or, you can drive around and see how many missle silos you can find in CO and the surrounding states.

looking for a tuned input board for an older linear amp. these were available some years back and offered as a retro-fit by varrious manufacturers. my amp is a grounded grid and it uses four 811a tubes, with an input impedence of 80 ohms +or- these boards were switchable and not very large. as i recall they were about 4" square, im guessing as to the size, it's been a long time. i think some of the manufacturers were DENTRON, AMP SUPPLY, RF PARTS and others i assume. oh well if you have one of these things you will know it.

thanks to all & 73.......george

George;
Have not tried the Krylon. However PEP BOYS sells a krinkle black paint for cars that works very well. It is only $2... something a can. I have restored many a rig with it and it has very little smell and can easily be sprayed vertically although I too prefer flat or horizontal. I use heat lamps and spray at least 3 fairly heavy coats about 10 minutes or less apart. The finish is a finer but nice even krinkle black. I will try the Krylon and compare-Thanks for helpful tip. Note: all krinkle paints must outgas inorder to form the finish--cold metal does not help the process--and the paint must dry several days as George mentioned. Lots of fun! 73 Bill (k6EC)

I have a 51J-2 in untested condition. Complete but missing power cord
which is why it is untested.
Has extra hole in front panel that will need to be filled. Think someone
put a phone jack there.

>cars that works very well. It is only $2... something a can

Thanks. We have very few Pep boys in the midwest, but I'l check at the big
auto places. The paint I used is Krylon 3370. Home Depot is supposed to
carry
it although I didnt see it at the one near here. They *do* have some (hic)
Ralph
Lauren "crackle" finish paint, which from the sample looks more like General
Radio's
flattened raisins look. They claim by adjusting the process somehow you can
vary the
crackle size from squished apricot size down to raisin size. I havent had
a need
for that kind of a finish, but there it is. Oh, being Ralph Lauren, it
comes with a gold
undercoat, I assume you can toss the gold can and substitute your own black
undercoat. (which shows thru the cracks in the top coat).

The phoney notion of a liberal press notwithstanding, the venal gore-loving press doesn't have the chance to report shovel mass-killings, though the opportunity arises too often to report gun mass-killings. When was the last time someone walked into a school or office and killed 10 people with a weapon other than a gun or a bomb?

Once again: ham radio is not dying. There are *many* more licensees of all classes today than *ever* before. Ham radio did OK in the 50's with less than a third of our present numbers. We have lots of spectrum, and are likely to gain more HF spectrum in the next decade. The regulatory environment is better now than ever before: fewer regulations, and less governement and military hostility to ham radio. The Chicken Little routine is tiresome. Hams have been crying that the end is near since the Radio Act of 1912 (then during/after WWI, the Act of 1927, the Communications Act of 1934, after WWII, the 1951 license changes, and many other times). Hamfests are shrinking because the interent provides a terrific venue to trade gear and to chat about radio and exchange information, in an age when people have less free time to attend hobby functions, they can hop on the internet anytime and do much of what they used to at hamfests.

I agree that drug prohibition has cause far more problems than it has solved.

One thing that will help the school shooting problem is to hold parents responsible for their children. This means, among other things, their access to guns. Columbine was unusual not only because of the number of shooters and the extent of the loss of life, but because the two shooters got at least some of their guns from the black market. Kip Kinkel and the shooters at Paducah and Pearl, among others, got their guns from their parents. They should be charged as accessories to the crimes their minor children have committed.

How about one of the biggest mass murder of recent times, where a guy went into a night club in New York with a can of gas and a book of matches ? New York's strict gun control didn't stop him, he just used another method. Until society decides to control the criminal regardless of his methods, nothing will change except the victims ability to defend themselves...

Gun control has created a hell of a lot more victims than it will ever save !

Hello to all...

Heathkit SB-line stuff for sale:

- Cabinet: no dents, has the usual chipping and scratches, would be nice with a repaint. $10.oo plus shipping

- SB-102 front panel: overall nice, has minor chipping on the top edge (where the lid closes onto it) and a "ring" worn into the paint from the DRIVER tune knob being too close to the panel. The knob hides the mark, however. This panel is good enough to replace a beat-up one or one that's been drilled. $10.oo plus shipping

- Knobs: I have a bunch of the smaller knobs (but no VFO knobs) available. Condition ranges from good to great. $1.oo each plus shipping

- Lever knobs: These are the onese used for CW filter selection and PA loading. $5.oo each plus shipping

- Panel meter: The face is "history", but the movement is guaranteer good. $5.oo plus shipping

I don't think I'd want to live in a society which has complete control over all its citizens. If we are committed to living in a relatively free society then there will always be those who will be violent, many of whom will do so on short notice (a "fit of passion"). The more access society has to powerful weapons, the greater will be the violence and killings.

You can give yourself a slight advantage by arming yourself, but there is a cost to society of your doing this, as you may one day use your weapon in a non-defensive manner, or it may be stolen and used in such a way.

There is no easy answer to this issue, no "right" policy. Both sides have valid reasons for their positions.

It is interesting that this thread morphed here from the rights vs. privacy thread it started out as.

Ramsey was marketing its products for eavesdropping purposes, I think there is little question about that, and there is certainly an argument that people deserve a right to privacy. There is also a right to build electronic devices, even though they may be used in an offensive manner. You cannot ban hammers because they might be used as weapons!

The key to these and other "issues of the day" is striking a balance. There are no absolutes; no one side or another is "right" and the other "wrong."

I would further posit that such open-ended discussions are therefore not appropriate in these usenet groups and, should there be interest in continuing them, find another forum or go to email. In that vein I apologize for this posting and promise to make no more.

Hello to all,

I have for sale a Ten-Tec Scout 555 transceiver with optional noise blanker, hand mic, mobile mount, and band modules for 80/40/20/17/10 meters, along with the manuals. The rig is in good shape with slight wear on the cabinet, and it works fine. It is my dedicated mobile rig, and I use it daily on my way to and from work. The mobile mount is a bit scratched up, but it works fine (it was that way when I got it; I don't use it). I bought the rig used, so I didn't get any of the original boxes. I will sell the whole setup as a package for $500 plus shipping. I just bought an Alinco DX-70T, so the Scout has to go!

Howdy Hams!!
I will be in Loveland/Ft. Collins on business.
Any ham stuff to kill a weekend within a couple of hours drive??
Any suggestions at all??
Thanks....Dave ham@cybercomm.net

That rig is VERY fussy about correct tuning.
LOTS of power out of those hard to find 8950's, but do something wrong and
there history!

Nope, don't arm children. But *properly training* and then arming
teachers who accept the responsibility would probably save lives.

Check out the MIT Electronics site at:

www.geocities.com/mit_electronics

for marine safety equipment such as the NLP-18 Nav Panel and the
Alert 12 Fume - Water - Heat alarm System. MIT is currently
re-designing the Alert 2000 with additional featuressuch as:
An emergency switch to alert the crew of trouble from the wheelhouse.
Connections for as many as 4 Bilge Water sensors, 4 Heat detectors,
4 smoke detectors, & 2 Fume sensors.

Message-ID: <3887025C.4BCBAEAA@erols.com>
Source record: 72544

If the XYL isn't looking, I use the oven to pre-heat the piece, then bake at less that 200 deg. This really brings out the wrinkle. Years ago, when I worked part-time for a surplus supplier of aviation parts, we used an old pizza oven. I'm a firm believer that heat and paint go hand-in-hand. BTW, one can purge the oven simply by going full-mil power for about 10 minutes!!!

I have an AM-1780/VRC Amplifier audio frequency for sale.
This is the amplifier unit from the AN/VIC-1 intercom system used in the modern armored vehicles. 40$ for the amp plus 25$ shipping cost from Holland, shipped economy way. It is complete and in good physical condition but I can't test it.

Source record: 72551

Greetings,

I'm looking for an old Abbott Instrument TR-4. There have been a few on E*** but the prices have been outrageous. It's for nostalgia purposes, as I purchased six of them back in 1955, ($20.00 for the lot.) and converted the transmitter sections to crystal control. (They were originally modulated LC oscillators.) We used them for the Civil Defense network on 6m. I had one mounted in my 1934 Ford. I'd love to have another, but I don't want to sacrifice an arm for it. In their original condition, they can't legally be put on the air. Anybody got one of these things laying around? Willing to buy or trade for other BA gear.

Also looking for a Rogers Electronics "Black Widow" transceiver for either 6 or 2m. They were made in Los Angeles, on La Cienega Blvd. Light blue in color, with the distinctive black spider in the tuning dial.

Doug Moore KB9TMY (Formerly K6HWY)

Yea, For Denver - Your thinking about CW Electronics on Lincoln Street.

Spent many a time (and money) there. 20 years ago - Used to oggle all the neat Heathkits, Collins and Hammarlunds. _ They had one hell of a used Ham Radio Department.

Then computers came in during the 80's and they moved all the Ham Stuff upstairs. They had a secret stairway in the back to get up there. If you where new - the computer sales people would point you to older salesmen who would show you the way. They were not interested in talking to you unless you were willing to take home a system right then and there...

Eventually they stopped selling ham stuff. They also stopped selling electronic parts because most of that was bought by hams who were not coming in. So they focused on computers only.

I think about 7 or 8 years ago they went out of business when computers were being sold by the chain stores...

Now if I remember right - there was a little electronic surplus place/TV-Radio shop just inside the loop at North Aurora. (SE Denver). The owner was an old Nat Guard TSgt who fought in Vietnam. He buys alot of radio junk from Buckley Field and who knows where else.

If he's still alive the store is still open. He's retired and only runs the store to get away from his wife...

1303. Re: Black Wrinkle Experiences

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-20 00:00:00 UTC
From: Jack Taylor <n7oo@theriver.com>
Message-ID: <euHh4.37983$475.974803@news4.giganews.com>
Source record: 72562

My experience is that the wife's hot air hair blower (1500 watts) does wonders in speeding up the crackle process. Use two of em on a large surface so's to bring the temp up more evenly. One advantage of heat in addition to speeding up the process, is that you don't need more than a couple of coats of paint.

I did have trouble with vertical surfaces due to paint runs, but will remember to make the surface horizontal in the future. Besides using buzz bombs, for large surfaces one can buy gallon cans of wrinkle and use a spray gun. Wrinkle paint does take time to dry though; more than 30 days before the softness completely went away on a large cabinet I did. If one goes the gallon can avenue, make sure the supplier has the type of finish you desire (gloss, semi-gloss, or flat). If only flat is available, it's possible to clear coat it to bring up the shine.

Source record: 72566

I have a Galaxy V MKII with matching speaker/PS AND the rare station
console! For a really nice looking 3 piece set.
This unit was retired years ago and I have not plugged it in. I would
suggest bringing it up on a variac slowly.

It looks really great, no warranty on how well or if it works, since I never
tried it.

$500 + ship for all three.

1308. Re: Question re: checking paper caps

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-20 00:00:00 UTC
From: Thomas B Mills <Thomas.Mills@nsc.com>
Message-ID: <38877619.D05B6EC9@nsc.com>
Source record: 72567

I recently replaced about 10 caps in an old Tektronix scope. They were all leaky, but did not show up as such on a dvm ohmeter. Most were ok until the votage across them was over several hundred volts. Then the leakage climbed into the hundreds of microamps, causing real problems in the high voltge power supply section.

1313. Fault on my AR88

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-20 00:00:00 UTC
From: stephen O'Malley <steve@g7anv.freeserve.co.uk>
Message-ID: <8684livil1@news7.svr.pol.co.uk>
Source record: 72572

Help wanted !

Anyone out there with knowledge of the workings of the old classic AR88 radio, had a 'short' whilst fitting s-meter and the following faults appeared.

Reduction in Audio output, noise limiter inoperable, as also is A.V.C. which doesn't seem to hold output at the level one would expect (wouldn't operate the set with headphones !!)

Sensitivity seems OK and appears unaltered although with R.F. gain at minimum, signals can still be heard, it didn't use to be like that, also on warming, a distinct 'crack' is heard then the signal is there, very abruptly, which didn't use to happen.

All valves have been changed and voltages appear fairly normal, anyone got a list of test points / voltages ?, any help would be most welcome.

Another fault exists but is not related to the above events as this problem has been there since I've have the receiver, namely the crystal filter has never worked, when switching selectivity the only thing that happens is a drop in output and a slight hollowing of the audio as one moves from position 1-5 any help appreciated.

Do crystals age and gradually lose their electrical characteristics !

Set is mid 1940's so its getting on a bit although for all that, its a brilliant set, especially on the lower frequencies, wouldn't exchange it for an eastern push button black box !

Does anyone know where old AR88's go when they die or are they like elephants !

If anyone knows of any spares available, please let me know.

Many thanks

John O'Malley
UK

From: Mike Linger <gspubl@tca.net>
Message-ID: <s8fm68rreh6117@corp.supernews.com>
Source record: 72587

FS: ITT-MacKay 3020A HF receiver in very good condition. This is a high performance commercial receiver with superb filters for AM, SSB, CW reception. This particular receiver is really hot on the HF general coverage bands and includes an operators/service manual. I urge you to check the Communications Receivers book where you will get the specs and performance info. Price is $850, guaranteed. Mike.

1329. Re: FS: Collins 6 KC filter for 51S1

Newsgroup: rec.radio.amateur.boatanchors

Hi,
If this filter is already sold, another alternative for AM filter for
51S1 is to look for R-1051 filter package which is still available from
Murphy's surplus. It is 7 KHZ bandwidth and price is only fraction of
what this gentleman wants.

1330. Drake Manuals on CDs

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-20 00:00:00 UTC
From: "William L. Turini" <Turini@hamanuals.com>
Message-ID: <3887F003.AFB1FF7C@hamanuals.com>
Source record: 72589
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

How would you like to have manuals, schematics, modifications and references for Drake radios available at your fingertips for viewing any time you have a question?

HAManuals Series 1, the R.L. Drake Company, is a two CD set that contains:

* manuals for Drake radios from the 1-A to the R8, including many commercial models
* service manuals for the R7, TR7, R8 and numerous commercial radios
* modification and historical information from Sherwood, Sartori, Fox Tango and others
* manuals for Drake addons and accessories, including DX Engineering Speech Processors and E-TEK Frequency Readouts
* the new update to Wayne Montague's Drakemod 6 - Version 6A
* manuals for the TV-7 and TV-10 tube testers including updates to the latest tube reference data
* a bibliography of Drake related articles
* a complete listing of all Drake amateur and commercial radios
* screen saver images of Drake manual covers
* and much more!

These CDs are viewable on any computer that supports Adobe Acrobat Reader, available free of charge from Adobe at www.adobe.com. You can view this CD on a MAC, PC, Unix, Linux, OS/2 and other computers.

Purchasing these manuals individually would cost you over $1,000 for the complete set. Now, for less than $80 you can own a reference library
of Drake material, including many hard to find manuals and schematics.

For more information, and to browse the contents of the CD, please go to:

http://www.hamanuals.com

In looking tonight at the S meter for my RME 69 I realized it is IDENTICAL to the one I need for the Patterson PR-10, except for the face (which I have).

Sooo does any kind restoration type have an RME 68 S meter they will sell me. It need not be pretty at all just functional as I will replace the face and put it onto the Patterson's body

73 and thanks

>and says PR-10 on it.

I woldn't throw it away. You might find another meter like it at a hamfest
or elsewhere. You would be surprised how often these are off the shelf
stock meters with a custom dial scale inltalled. If you run into one that
is physically identical including fullscale milliamps, you only need to put
the PR-10 scale into the replacement one to make a stock replacement. I did
the same thing for an HRO meter once.

1339. FS or trade: 500 kc marine CW transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-20 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8663ttmgt1@news.hawaii.edu>
Source record: 72639
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

For sale or trade:

"ITT Mackey Marine Reserve Transmitter Type 2017A
405-535 kHz, 40W output, A2 emission"

Almost new condition except for some scratches on the top of
the chassis (probably from rack mounting).

Crystal-controlled with the following frequencies:
425, 454, 468, 480, 500 kHz (all in A2!)

Front panel: Antenna tuning controls (course and fine), 0-5 amp
antenna current meter, channel selector.

This transmitter is solid state.

Asking $395 plus shipping from Minden NV 89423 (shipping should
be around $30 via USPS), or trade for a rotating light beacon
to be used in a lighthouse restoration project. Something a bit
smaller than an airport beacon would be fine.

73, Jeff KH6O
Four bedroom home for sale in Minden NV, close to Lake Tahoe, south of
Carson City. http://realestate.classifieds.yahoo.com/nevada/realestate --
enter town name: "Minden" then choose catagory "Resale homes by owner."

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

But it's not "authentic"! In order to "achieve" CCA status you GOTTA have
it all original for it to be collector quality.

There are probably some anal retentives who actually care.

For Sale:
Heathkit HW101 and HP23 power supply. Includes power cable
between xcvr and power supply. Front panel good, Case in nice also. The
nasty O rings have been replaced and the unit works. Due to age, no
warranty is made for the longivity of this unit or its tubes. $190 plus UPS
on the pair from zip 95827 (estimate 30 lbs total) I'll pay for the foam in
place UPS versapack and boxing. No docs available.

Tired of fighting cheap supplies!

Wanted:
Good quality adjustable bench "B" power supply
with *clean* output that will handle
around 0-500 VDC at 300 mA or better.
B- must not be grounded (both sides float).

Have trades (*please state your field of interest*)
or can purchase.

Thanks,
Dave S.

Hi,
I think the single crystal used in selectivity is out of frequency due to the age and it is necessary to determine the exact frequency and align the IF to that exact frequency.
de K6hm

There was an article in the December 1992 QST that explained how to modify the Heathkit SB-1000 for operation on 10 meters. If someone would be so kind as to scan that article and e-mail it to me, I'd be quite grateful.

Would also be happy to pay copying/postage costs for same.

Thanks & 73,

-Marty KI0LO

From: springer@artragrafx.com
Message-ID: <0fRh4.27$O2.855@harpo>
Source record: 72505

These are the nicest 8950's you will find. They check 100% on my B&K 707 Mutual Conductance Tube Tester (the best type of testing). These are the Heavy Duty version of the 8950. You can see the extra part in the tube (yellow arrow). These tubes are direct electrical replacement. The standard 8950 measures 4.2" these tubes measures 4.4". The boxes for these tubes have some of the color removed from the cardboard where tape was removed. You will not find nicer 8950's. Because I can not control how you use these tubes they are being sold AS-IS no refunds no returns. But you will not be disappointed. These tubes are EXACTLY as described. These tubes are UNUSED!!! You can see a picture at www.artragrafx.com/8950.jpg

Will trade for Drake RV-4 or Swan DD-76 or sell for 150.00 for the pair. Depending on condition of equipment I may trade+cash.

Message-ID: <388823CE.3789@virgin.net>
Source record: 72513

Have you got the circuit diagram? I would presume you do if you were making a mod, but on the other hand, the manual does include a list of valve-socket voltages, so perhaps you don't.
The circuit diagram is quite hard to follow - RCA drew the valves upside down and used M for 1000 in resistor values instead of K, which doesn't help.
Sounds like something wrong with detector/avc parts, but in what part of the circuit exactly were you fitting the S-meter? And have you removed the mod so as to attempt to restore initial conditions?
I've had to replace lots of resistors, especially high value ones. They were no-where near the original values. Also, most of the C's. They were leaky. It's just about certain to be a faulty R or C, because that's all there is. Unless you've open-circuited an I.F. coil or switch.It's probably worth while checking every resistor and capacitor with an ohm-meter. It's quite satisfying finding a faulty one and replacing it!
My xtal filter still works OK. And the selectivity 1-5 produces acceptable bandwidths. Selectivity problems may just be due to poor alignment. The IFT's may be tuned to a different frequency from the xtal. A wobbulator helps a lot. I built a very simple one for this purpose (RadCom - Nov 1992) and it shows the selectivity variations very clearly.

Drake.

Marsh/AC5EY >>

- - - - - - - - - -
NOS stands for "New, old stock," which sounds like exactly what you have. The abbreviation is not limited to radios; it is also used in other hobbies to reference old parts never sold or used. Paranthetically, I've heard one automobile collector say it means "Never on street."

Mike

1379. FS: Hallicrafters SX-100 Receiver

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <s8gqgkteh6148@corp.supernews.com>
Source record: 72521

Must make room for incoming.

I have an SX-100 for sale. It has some wear on the machined-metal eustachion, reducing its value considerably. It has a crack in the S-Meter cover. It performs VERY well, and is a great radio to have in the shack. It has pleasant audio and is a smooth band cruiser.

It does have the crystal calibrator, is shiny,clean and looks nice, with all the original knobs - but is NOT collector quality. Notch filter works. There is an intermittant problem associated with the S-Meter function (rapping the AGC tube fixes it, so certainly minor!) Manual copy included.

First $185 plus UPS shipping/insurance from Indiana (US & Canada only, please.) I will carefully pack and double-box it.

Thanks,
Brad, NB9M

of
> those is too low.

While I generally agree with your post, I make two comments: The input impedance of common DVMs is USUALLY 10 megohms, so the test is quite valid with them. VOMs, usually not. Secondly, one should use the voltage the cap is rated for, so using a 300V supply on less than 300V rated parts is slightly risky. Since MOST circuits are below 300V, a test at 300V is reasonably valid for 400V and 600V caps, but one needs to be mindful of the application and test accordingly.

It was suggested by another poster that 'if it ain't broke, don't fix it' which is what I subscribed to, too, until I checked the caps in a set that was working well except for a bit of noise. The transformation was increadable! Recapped, it ran rings areound it's former self. That bit of leakage individually has small effect on the circuit performance, but when added up has a significant effect on overall performance. I will say, though, that some of the mil caps are still very good after 50 odd years, while others are as crappy as consumer grade caps.

Source record: 72529

Hello:

Getting way too crowded in the radio room at home. Need to clean out a little.
Have the following items for sale.

Siltronix 10 meter amp La-650. Gooding working condition. Tested. Put 50w in got almost 500 w out. Uses 5 8950's asking $475.00 plus shipping

MFJ 941 D Tuner. In excellent condition 35.00 plus shipping.

2 Brogran audio amps. Both in very good condition. One is a 35 the other is a 50 model. The 50 model has two 6L6's. asking 35.00 for each plus shipping.

DSI frequency counter covers 50Hz to 512Mhz. In constant use. Excellent condition. With the manual $30.00

Cabinet for Rack mount radios. Approx. 41/2 feet tall, 18 inches wide. Silver Grey in color. Has a few minor scratches, but over all in very good condition. If I cannot sell, I may mount my SX-115 and SX-62 in it. Asking 75.00 pickup only central florida or I can bring to the Orlando Hamication.

Thanks for the read.

Rich:
At our local OTC annual gathering some years back I heard a tape of spark
sigs from famous radio stations e.g. NPN. Assume transcribed from 78s or
Edison disc. Made some attempts to trace origin, think it belonged to a
local spark enthusiast now SK.
Will make another effort to track it down. May take a while.
I would be interested to buy a tape of "Wireless Fantasy" . Can you tell me
more?

Hello, Name here is Joe (N3IBX) and I have a Ameco model BIU SWR meter (c. 1962). It has a switch for two ranges but I don't quite understand it since I don't have the manual to it. It is supposed to be accurate up to 225 MHZ, and has a scale for SWR, Percent power reflected and for voltage.
If anyone out there has any information about the correct operation of it, I would be very greatful. Thanks for the bandwidth and 73.
Joe Cro N3IBX

1401. NEW Email List for boatanchor-auctions only

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-22 00:00:00 UTC
From: Eugene Rippen <soundval@foothill.net>
Message-ID: <86df21$2ur$1@ns2.foothill.net>
Source record: 72393

A LIST is now set up for the posting of "AUCTIONS" for
"boatanchor" related items. For our purposes, "Auctions"
mean items listed for sale without fixed prices. Postings
may be as simple as "$150 obo", or formal auction terms,
or the announcement of a URL at which there is an auction
(e.g. an eBay address, etc.).
"Boatanchor" may include old tube type broadcast radio stuff,
but not recent audio gear, tubes or parts..

Subscribers have the choices of:
1. Receiving each email posted by each subscriber.
2. Receiving all emails once each day in one message.
3. Receiving a digest once each day of just the "subjects"
and "authors" of each message.
4. Receiving no emails. but allowing subscriber to go to
egroups.com and selecting this LIST
"boatanchor-auctions@egroups.com" and then
selecting which messages to view by "subject"

To subscribe
First, Register with www.egroups.com/register (simple)
Once registered, you can subscribe to most egroups LISTS.
Then Subscribe to "boatanchor-auctions@egroups.com"
(NOTE: Singular "boatanchor" and plural
"auctions" & "egroups")
BY MERELY sending an email to:
boatanchor-auctions-subscribe@egroups.com

RULES will be simple:
Post for tube era related items only, for which firm prices are
NOT stated.
NO radio program tapes, magazine cut-out ads, CB stuff
(except linears tuned to Ham Bands), or tubes or
parts for the audiophile market.
Please refrain from claiming something is "rare" unless
certain almost anyone would consider it rare.
Post only once for each auction. (No followup messages)
PLAIN simple TEXT ONLY. (Not even a background color)
Use descriptive "Subject" headings.
Include closing dates where appropriate

FOR THE NEXT FEW DAYS (after 1/22/00) emails may
contain some advertising. That should end when egroups
receives my check.

THIS MESSAGE MAY BE FREELY COPIED AND
REPOSTED in its entirety.

Eugene Rippen

1403. WTD PRICE HELP -BC221-AK

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-22 00:00:00 UTC
From: Brian Hill <jonnysocko@jps.net>
Message-ID: <388a5f00_3@news.jps.net>
Source record: 72395

Hi all I need price and any info on a Signal Corps Model BC-221Ak Freq.
Meter. It looks like late 30s or early 40s. Coverage is 125Khz-2Mhz. It has
a rectifier power unit model RA-133A made by American Communications Corp.
This unit is complete with P.S. and another unit and the freq meter all in
one cabinet. Whats the other unit? The freq meter slides into the case and
plugs in and the PS and the other unit is mounted directly to
the cabinet.

That 7 KHZ Mechanical filter is also made by Collins and I don't know what some people say about " Original". I think 7 KHZ filter is also one of the original filter. 51S1 does not come with original filter on AM.

FS: Icom 737 HF tranceiver in mint condition and in original box with original manual and a service manual. It works perfect and has the nice large LCD display, Digital Readout frequency offset, passband tuning, a host of other features, and built-in antenna tuner that really works nicely. I want $650 for it. I will trade it for a TMC GPR-90 receiver also.....Mike.

Looks like *someone* has a Globe King 400!

If you want to replace the 7.5 V filament xformer, 811As work well for the 5514s and 812s (?) supposedly work for the V70Ds.

Why WRL used this weirdo tubes is anyone's guess, when they just as easily could have used 811As from the get-go.

>me.

The receiver had a serial number over 4000 and was described as being in excellent physical and electrical condtion. That's worth $1000 with one filter. The four extra filters are worth at least $800 and probably $950. The last time I saw a 312A-1 sell it brought $750 and the original manual is $50. Ya got a calculator?

Covers the AM broadcast band, Shortwave, and FM broadcast band. Front panel has concentric controls for volume, treble, tuning, and bass. Piano key style buttons are used to select the band, or the phono input, the connection for which is on the rear panel. An additional 3 buttons are used to selct speech, solo, or orchestra tone. There is also a tuning eye indicator, but it is very weak and is hardly visible. In addition to the phono input, the rear panel has connectors for an external speaker, an external shortwave antenna, and an external FM antenna. The power cable, fuse, and an input voltage selector are also found on the rear panel. As you can see from the picture, this radio is in good shape cosmetically, and it works well on all bands.

A word of caution about the S-38. I know they go for a lot of money these days, and are perceived as a valuable item. In reality, they were not much of a radio in their day - poor selectivity, non adjustable VFO etc. With that said, electrically they have no power transformer - they are an AC-DC set. There is a correct way to plug them in an an incorrect way. The case is insulated from the chassis by cardboard or something similar. The kitchen radios of the day, the All American 5's were of similar design, but were in plastic cases. Be careful messing with that arrange-ment. There is a definite shock hazard. I don't think they are appropriate for ones' grandchildren, etc. Take care & enjoy. 73, Ross N0ZA

I've never seen them go for much over 50 bucks, maybe
I'm not looking in the right places. ;) .

>In reality, they were not much of a radio in their day -
>poor selectivity, non adjustable VFO etc.

Non-adjustable VFO? How do you change frequencys?
Mine had two knobs, one for frequency set and another
for bandspread. Mine was a S38C. At the time I owned
it, a very fine starter radio for the money.

> With that said,
>electrically they have no power transformer - they are an
>AC-DC set. There is a correct way to plug them in an an
>incorrect way.

This observation is *DEAD* on. With an emphasis on the
DEAD. I decided to work on the antenna connected to
mine when I was a kid. The radio was off, but plugged in
"wrong". When I grabbed that wire, standing on the wet
grass, shouting "Oh say can you see!!!!!!!!!!!!!" was about
all I could do. Thank goodness I ran/fell over and broke the
wire. I'd recommend an isolation transformer for anyone serious
about using this radio.

1438. FS: COLLINS 62S1 VHF TRANSVERTER

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-22 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <3889D331.4FAF60@ix.netcom.com>
Source record: 72473
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

Got another one-

FS: Collins 62S1 VHF transverter.
No manual. CCA "Very Good" cosmetically.
Insides clean and complete- no mods evident.
I have not tested it as it needs a new power cord.
It has been in storage for years. No visible leakage from caps.
I have looked over every inch and can't find any evidence of
damage or "tinkering." All controls move freely.
All knobs original. I don't see any reason it shouldn't
power up, but I'll leave that to your judgement.

I do not know and do not warranty working condition,
but I do offer a 5 day inspection and return privilege
if you feel this description isn't correct-
just return it (insured) in the condition you received it
(individual rig identity recorded to prevent confusion).
Submission of a request to buy means you accept these
terms and conditions.

$1500 plus shipping from 78728.

Thanks for looking.

ah capitalism at its best. Where there is a need there is a want. Where there is a want there is a buyer. Where there is a buyer there is a seller. Price negotiated monies exchanged and happy deal for those involved. Sour grapes are for those socialist
liberals who wish they had the radio to sell for the big bucks. And/or the money to buy one , or the power to cotrol the market price for themself so that they can get one cheap . And sell it for big bucks.

Supply and demand is the
AMERICAN WAY.

so is complaining... P

Thanks for the great tips on wrinkle paint.

Two more questions?

1. What technique or process is used to get the very fine wrinkle finish seen on old command sets and other legendary radio anchors. Most of my wrinkle painting (those jobs that were successful) produced fairly deep wrinkles.... sometimes looking more like scar tissue.

tnx

Bob, KE6F

>What type of pick up loop would I need to use with my AM station
>to interface the scope?

I used to use an air wound coil with a half dozen or so turns, about an inch in diameter near the antenna tuner coil to pick up enouch rf to deflect the scope tube plates directly. The xmtr tank coil ought to work as well. Right now I have a small toroid with one of the output leads of the xmtr going thru it. The coil on the toroid picks up enough rf. The stock Heath HO-10 uses a small capacitor coupled off the hot lead of the coax. You can probably come up with something via trial and error.

To me, running a rig without a scope to monitor the modulation is like driving a car at night with no headlights.

73, Don K4KYV

An even, LIGHT coat will give the finer wrinkle finish - and even
better if the painted object can be placed in an oven at low heat to
aid drying... THICK applications of wrinkle paint are more likely to
end up with deep wrinkles - and also varying undesirable patterns, as
it becomes hard to tell paint thickness as more is applied.

Boy OH Boy does your Government love people like you, when it comes and bites you in the ASS and it will it will be too late to say we where right all the time. Make NO mistake these evil SOB's are running a police state you DO NOT live in a free country. Your Government is just another brand of Communism. I find it difficult to accept how the American people have stood back and be well and truly STUFFED you spent years and lost lives fighting Communism all over the World only to have it happen in your own back yard. Mr Clinton the antichrist is in bed with the Chinese only because he is a Democrat which is another word for communist. Wake up America before it's too late, personally I think you have already kissed your ASS goodbye. If you think the FEDS are going to stop at the small guy running an electronics shop then you are living in the dream world they want you to, next it's going to be Deja.com and the Internet. The last thing they want is forums like this spreading the Gospel and sharing information, I give it 12 months at the most and all of us could be charged with an offence for just reading this stuff let alone contributing to it.

Actually, the BC-221 (and the LM) are heterodyne freq meters that are calibrated to above 18 MHz. Each unit has a calibration book (serialized for EACH unit!). If the unit is is fine condition and with the book, they go for (in the D.C. area) about $50-$70. I suppose Ebay would offer their typical aberration, however. Without the book... a lot less.

I've had two of these radios in my ham career, the
first as a starter rig with a 5 watt, 1 tube transmitter.
I achieved WAS with it in 7 months time. It IS a
definite health hazard if/when plugged in backwards.
One was an S-38B, the second an S-38C. Both had
a vfo knob, plus the two frequency adjustments. Use
an isolation transformer and it will serve you well as a
beginner radio. Just don't bang the table it sets on..

Hello:

Have the following items for sale:

HP Model 4150 SWR meter in very good condition. I use it with DC =
power.
But it can also be used with 110 AC asking $30.00 plus shipping

EMC Tube tester Model 211-213 works. Is in very good condition. =
No
scratches or marks. The meter is perfect. Sorry no manual. asking =
$25.00 plus
shipping.

Channel Master model 7054 50 - 500mhz 50dB wideband amplifier. =
Works.
Is in perfect condition. No marks and clean. Excellent for ATV as a =
preamp.
I've used it for both TV and UHF scanner reception. asking 35.00 obo
plus shipping.

Siltronix 10 meter amp La-650. Gooding working condition. Tested
extensively. Put
50w in got almost 500 w out. This is an outstanding amp. No problems
with interference(TVI).Uses 5 8950's asking $475.00 plus shipping
Will consider reasonable offers.

Cabinet for Rack mount radios. Approx. 41/2 feet tall, 18 inches wide.
Silver Grey in color. Has a few minor scratches, but over all in very
good condition. If I cannot sell, I may mount my SX-115 and SX-62 in it.
Asking 75.00 pickup only central florida or I can bring to the =
Orlando
Hamication.

Thanks for the read.

Hi Gang,

I have a 28 volt, 5 digit display unit on eBay. This unit comes from a gas pump and is designed to project digits 0-11 through a clear or frosted glass/plastic window. It would make a unique display for a homebrew radio project. See it at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=244254965

Starting bid is just $2 plus shipping. Thanks for looking.

>mount a speaker. One ready for a speaker a plus, but what have you?
>Color not important but black wrinkle preferred. Email direct if you
>can help,thanks.

The best thing I have found so far for that is a 5 1/4 inch rack panel for either a single or double fan. You can get them at most pro audio stores for around $12 to $14. They are black and you just mount the speaker where the fan would go. I use a single for a single 8 ohm speaker and I use the double to mount two 8 ohms for a Collins or Drake needing 4 ohms.

You then could get a standard 1 3/4 inch panel to complete the 7 inch space that you need covered.

1483. Odd HFO/IF Microphonics

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-23 00:00:00 UTC
From: cnord@snet.NET
Message-ID: <024801bf65f2$e1fcdf00$2f243ccc@default>
Source record: 72368

Got a problem with the SX-28 is stumping us.

The HFO or IF has very bad microphonics. It is so sensitive one can speak (loudly) into the HFO capacitor and modulate a dead carrier from an outboard signal. Bring it up enough and it goes into feedback. By tapping the most sensitive area seems to be the plates of the HF tuning cap. It is also more sensitive as selectivity is increased.

The following have been ruled out

*Tubes-All tubes have been substituted.
* AF- The audio circuit was disabled and the problem was still seen on a scope.
* During restoration all parts were checked and seemed to be on the money. If not they were replaced.

The rcvr is in the final stages of a restoration and this is just an unacceptable issue. Anyone have some thoughts ?

Thanks and 73

Randy....I have a R-388 that works good, but does not have the bottom cover. The dial drum also needs to be recovered with the new sticky label replacement. It is complete and unmodified. I will trade it for something else or sell it for $350.00. I also have a SX-28, but I think it is a model because of the fuse holder on the rear panel. It is in good codition with no mods and complete. I haven't thought about selling it, but it would probably be in the same price area. Jack k8xx

There was a GPR-92 at Dayton last year, believe the guy wanted $2K for it. Don't know if it sold or not.

This radio, along with the SX-88, seems to be kind of a "holy grail" for boatanchor collectors.

I sold a beautiful GPR-90XD at Dayton last year for $900. However, pricewise the two radios are not really comparable since the '92 is MUCH rarer than the '90. The '92 has cheaper construction (PC boards vs. point to point wiring) than the '90.

If you have a chance to buy one for <$1K you're doing pretty good and could probably turn it around and not lose anything if you decide you don't like it.

1497. Email List for finding Boatanchor Auction - Explained further

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-23 00:00:00 UTC
From: Eugene Rippen <soundval@foothill.net>
Message-ID: <86gh26$76d$1@ns2.foothill.net>
Source record: 72382

NEW EMAIL LIST is now set up for the posting of
notices of "AUCTIONS" for tube era items..

Not only are there notices of URL's of internet commercial
auctions, but also one can post their own auction. A
suggested form is even available for preparing one's own
auction and can be found at:
http://www.egroups.com/group/boatanchor-auctions/8.html?

For "boatanchor" related items. For our purposes, "Auctions"
mean items listed for sale without fixed prices. Postings
may be as simple as "$150 obo", or formal auction terms,
or the announcement of a URL at which there is an auction
(e.g. an eBay address, etc.).
"Boatanchor" may include old tube type broadcast radio stuff,
but not recent audio gear, tubes or parts.

Subscribers have the choices of:
1. Receiving each email posted by each subscriber.
2. Receiving all emails once each day in one message.
3. Receiving a digest once each day of just the "subjects"
and "authors" of each message.
4. Receiving no emails. but allowing subscriber to go to
egroups.com and selecting this LIST
"boatanchor-auctions@egroups.com" and then
selecting which messages to view by "subject"

To subscribe to boatanchor auctions list
SEND boatanchor-auctions-subscribe@egroups.com
Note: Singular "boatanchor. Plural, "auctions' and
"egroups"

RULES will be simple:
Post for tube era related items only, for which firm prices are
NOT stated.
NO radio program tapes, magazine cut-out ads, CB stuff
(except linears tuned to Ham Bands), or tubes or
parts for the audiophile market.
Please refrain from claiming something is "rare" unless
certain almost anyone would consider it rare.
Post only once for each auction. (No followup messages)
PLAIN simple TEXT ONLY. (Not even a background color)
Use descriptive "Subject" headings.
Include closing dates where appropriate

FOR THE NEXT FEW DAYS (after 1/22/00) emails may
contain some advertising. That should end when egroups
receives my check, which has been mailed.

To change the mode by which you receive messages
(Every message, all messages at once daily, all message
headings only once daily, or go to egroups.com and select
messages to read)
GO TO: http://www.egroups.com
SELECT: "My Space" button
Then SELECT the group for which you wish to change
your mode of receiving messages.
SELECT: "Group Info" button on bar.
SELECT: "Modify Subscription" button at bottom page.
Then make the changes.
SELECT: "Apply Changes" button

THIS MESSAGE MAY BE FREELY COPIED AND
REPOSTED in its entirety.

Eugene Rippen

1498. FS:Hammarlund HQ-180

David, yours is one of the more interesting and enlightened comments on this news group. For a start I am English (or Brit call me what you like) I spent 5 months living and working in Colorado last October. Whilst there I had my own Radio chat show slot on American Freedom Network (KHNC out of Johnstown) I used to have a 2 hour show every Saturday. AFN is only a small network and as such I used to have to do my own research for my show, the long and the short of all this is that some of the stuff I learned and uncovered would make your hair fall out.

You DONOT live in a free country anymore, and neither do I in England. If you think I am some kind of nut then I am sorry ,but I have to tell you that some of the stuff I aired and some of the interviews I held with prominent and well informed people lead me into hot water so much so that the FEDS paid me more than one visit, I was about to be held on some jumped up charge about being anti American. Nothing could be further from reality, I love your country and the American people, I am very sad that they have let themselves be hood winked by nothing but a group of Communists (Bill Clinton and the Democrats) Anybody who belongs to the Council on Foreign Relations CFR, The Trilateral Commission, The Bildaberger Group, Who is a 33rd degree Mason, and a member of the illuminati (yes I am talking about your beloved President Mr Clinton the antichrist) has to be more than a little suspect. Just look at some of the Executive Orders he has signed, ask yourselves why he would he want to get into bed with the Chinese, who now control both ends of the Panama Canal. Ask your self what is the real function of FEMA (Federal Emergency Management Agency) and why there is over 160 EMPTY prison camps that will hold up to 5,000 people each dotted all around your country. Ask yourself why the IRS has decided to spend $ 100 million of your money arming themselves to the teeth. Mr Clinton does not give a rat's ass about America or the American people, he is a Globalist, he is a ONE WORLD GOVERNMENT man along with his partners in crime Tony Blair and all the other cronies around the World. Make no mistake when he leaves office his next move will be to the top job at the United Nations, if he gets it then it will really hit the FAN in a very big way and its goodnight America and the rest of the World you will have kissed your ass and sovereignty goodbye. By now you are all thinking that I am definitely a raving nutcase, all I can say is watch this space. By the way I left America before they the FEDS that is had the chance to put me in leg irons and lock me up in the Marion Prison.

Regards

Last day for the Heathkit HA-14 HF amplifier. 80-10M, weighs only 25 lbs and
is has separate genuine Heath HP-24 AC power supply..
VERY easy to tune, only ONE knob tune-up. Put bandswitch on correct band and
a quick "peak" of the tune knob and you're set!

A really nice unit for your collection.

My mistake,

The stamps DID include Tesla, they left out Marconi (a REAL surprise).

I goofed, they remembered Tesla but forgot Marconi. I guess they're trying
to correct history, finally.

>de K6hm
>
>
>
>

Try from $650 to $2500 depending on wealth of collector.
GPR-90s have been going for about $600.

However, I had a talk to a TMC employee a few years ago (4 or 5) who told me the 90 was a better performing radio than the 92, and he couldn't understand why anyone would want the later radio.

I have had several 90s in my 40 years of collecting; it is a very slick radio and very quiet in terms of internal noise. But with a SSB adapter (GSB-1 or MSR) it is relatively useless on modern modes. Frequency readout is poor.

Matt

a very good argument, Steve, think we are in a minority
too many collectors seem to care only for how the front is looking,
and don't even try the little maintenance - of adding oil to drives
when needed.

here is my suggestion for AGC-improvement (reposted):

The 51-S receiver was designed with AGC timeconstants as compromise
between the different modes, but this did not work satisfactorily for
SSB.

Have now scanned to gif file AGC modifications showing to optimize the
agc time constants to suit the different modes. With the
modifications, it is then the best sounding receiver I have ever
listened to on ssb.
If you are interested to see the circuit for modifications, it is
available as a 13kb gif file via email.

Note: The modification was carried out 10 years ago, and a friend has
later got the receiver, so I cannot guarantee that the circuit diagram
shows exactly the latest modification.
AM and CW modes may still need some further experiments with time
constant (series R+C), but it performed well on hambands as well as
BC-stations with heavy fading, it is also possible to choose the
original time constant for AM and CW.

Hi Carl,

In my limited experience microphonics have been caused by either a bad
tube or the rubber shock mountings of the tuning capacitor having aged
and hardened to the point where they were no longer doing their job.
Since you have substituted new tubes in all locations and you also said
that just talking into the capacitor created the effect, I would look
very carefully at the rubber shock mounts on the bottom of the
capacitor.

I would also like to hear from others who have suggestions on how to
deal with microphonics in receivers other than tube substitution and
replacement of tuning capacitor shock absorbers.

Do I remember some tale of iron nails being soldered to the stators of the capacitor, presumably to fix just such a problem??

I can peek into my SX-28A to see if the capactior has any bracing.. There MAY have been changes to the capacitor as time went on. Is this an SX-28 or an SX-28A? The A has clips that hold the cover over the tuning cap and front end tubes, while the previous model had screws.

By the way, a TMC-GPR-90 will sound off when you tap the front panel, but not as bad as you describe.

Carl,

I would focus on the HFO variable and/or connections. I have had strange doings associated with crummy connectivity between the rotor and the frame. My other H'crafters have parallel paths betweem the bearings and the wiper contacts. Wind on the rotors can cause a variation in the total resistance and result in the symptom you note. I have cleaned them by spraying the wiper contact area and the bearings with contact cleaner and then using lubriplate to repack the bearings. Seemed to clean up well and eliminate the frequency jump. I must admit mine have never been quite as sensitive as your's is, but I wouldn't be surprised!

Source record: 72308
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.misc

(While it doesn't glow in the dark, I'm considering this HT a boatanchor since Azden's abandoned it in the US market...)

I have a nifty Azden AZ-21 2M HT that I like a lot...except I only have the one battery pack that came with the unit. It seems like _nooobody_ among the "usual suspects" in the battery repackaging market has a replacement battery pack for this unit, so I could keep a hot spare. Heck, even my Yaesu FT-208's FNB-2's are still being sold! But not the Azden.

Anyone have a lead on these? Or know what style case is compatible, so I can buy a case and stuff it myself with new nicads? TIA, Ted

Source record: 72312

Hi All,
I just saw this posting and was wondering if this is rather high, or what? I don't own any Collins rigs as of yet as I have been scared off by the high prices, was considering jumping into the Collins pool, then saw this ad in rec.radio swap: Collins 312A1 lighted speaker $800
I guess that I should stick to Nationals and be glad that their speakers only go for a little over $100.00 or so. I realize that it may be lighted,(whatever that means) but for this ammount, it should also do most major housework and automotive repairs!!!!.
rgds,
Mark S.

But it's COLLINS! It *has* to be worth big bucks! And the new owner will probably keep it in a locked glass case and newver use it because it might get chipped or dirty.

Seriously, Collins stuff is pretty nice - as fine of an example of classical American engineering excellence as you'll ever find. You can find Collins stuff reasonable if you don't mind something a bit on the shabby side; the anal retentive "collectors" only want the mint stuff. Start with an R-390 or '390A - easy to get parts for and not a finer receiver ever made. Then maybe look for an R-388 or 51J series - not a great receiver really, but built like a tank and lots of fun to fool around with. Stay clear of 75A4s and 51S1s unless you find one really cheap - they;re vastly over rated and hideously expensive.

1567. FS: Johnson transmitters

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-24 00:00:00 UTC
From: toneri@home.com
Message-ID: <388bc28e.48016394@news>
Source record: 72386

For Sale: Johnson Viking Adventurer transmitter with copy of manual.
Excellent condition and works well. Few marks on case and has
original knobs and meter. asking $75

Johnson 6N2 transmitter with copy of manual. Last time
I used it was 1 year ago on 6 metres. asking $75

Johnson Viking Valiant 1. In very good condition.
Works well. Has a few mods, larger coupling caps in modulator and has
the adjustable bias mods for the finals and 6148 modulator tubes. New
dial drive for VFO dial. asking $300

Prices are $US and are negotiable.

The Valiant is too heavy to ship and prefer pickup or
can deliver in the Toronto, Ontario area. I will be going to the St.
Catharines flea market Feb 5 and could deliver there.

1568. FS: FT-101EE (needs work)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-24 00:00:00 UTC
From: martyt@pobox.com
Message-ID: <388bc2f3.10096346@news-server.kc.rr.com>
Source record: 72387
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have a recently acquired FT-101EE that I got from a SK's estate and which doesn't work - smoke eminated from the transformer/power supply board area when I turned it on, then the fuse blew. Subsequent fuses blew upon power up. Probably an easy repair job but I'm not interested in fixing it.

Looks nice - some rubbed paint on the trim ring and frequency dial but still has original plastic on front panel and the rest of it looks great.

Has only the standard SSB filter. Includes original manual, power cord, and original box.

$175 plus shipping

Reply via e-mail if interested.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

From: Nico van Dongen <nico.vandongen@compaq.com>
Message-ID: <86hirh$f94$1@mailint03.im.hou.compaq.com>
Source record: 72392

Hello,

I have a JT Arial Tuning Unit that was used with the remote antenna of the Wireless Set 22. I want to use it in a swap/sell deal to purchase some other vintage equipment but I haven't got a clue what its worth is. Basically the interior is identical to that of the high-power ATU of the 19 set. That 19HP Set ATU is selling in Holland for up to 200 UK Pound, depending on condition. This JT unit is even more rare but because of that it is very difficult to put a value on it.
Any input is welcome.

1581. Price of R-392, RT-70, R-109, accys

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-25 00:00:00 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <86k8os$tr4$1@nntp2.atl.mindspring.net>
Source record: 72250

I have a R-392 / GRC Federal Mfg. and Engineering Copr. Serial number 103. It seems to work fine, a few noisy switches but otherwise OK. Aso have a homebrew 28 Volt dc supply that gets the job done. It is connected through the front panel with the stock multi function connector. What is the going price on these, should I decide to get rid of it?

I also have a RT-70/GRC Transceiver, AM-65/GRC AF Amplifier with PP-281/GRC (I think this is the right number) 12 vibrator power supply, cables, Mic and manual. With this, I have a Interphone control box C-375/VRC, and a R-109/GRC receiver that can use the PP-281 internally for operation from 12 VDC. I think it is possible to connect the pieces thru the 375 contorl box to access the power supply and af amplifier in the AM-65/GRC, but have never had all of them spread out together to try it.

This would put together a nice green receiving machine with HF and VHF coverage, as well as a flea power 6m simplex FM rig.

I have held onto these for a while, hoping to have the space to set them up and get some use out of them, but that looks like less of a possibility with each passing month.

I would like to get an idea of value before I pack them back away. If anyone is truly interested in any of these items (the RT-70 would include the AF Amp, control box, mic and manual as a set), I would entertain offers of cash or trade for more compact working items; not necessarily vintage. I am currently restoring a Drake TR-7a, and any 7 line gear or accessories would be appealing.....

Thanks,

David

....well, before I actually get one from the UK, I figured I'd just check if anyone on the same continent has one they want to get rid of. (The UK price is reasonable, just that shipping is a bear and I like to deal with someone a tad closer....)

I'm looking for a Racal RA-17 or '17L and any of the interesting pieces that were made to go with it (like the SSB adaptor, preselector, etc.)

If you have something (and aren't deluded into asking a price that indicates you have one of the special ones where the chassis was made of platinum) please email me directly.

Thanks,
Lee.

Well, if they on e-bay, they're all in "mint" conditon, and extremely
"rare" and pricey...

Seriously, Amateur Electronic Supply has a selection of Nye-Viking
keys in the $30/40/50 range, as well as the usual gold-plated models
with jeweled movements... some of these keys cost more than my entire
first station did...

I doubt that L of Alvin, Tx actually reads this group to see your response, like some others, he only uses the group as a vehicle to spam his ads. As far as your question, if he did that, you and others might not be sucked into reading is post.

> VDC. I think it is possible to connect the pieces thru the 375 contorl box
> to access the power supply and af amplifier in the AM-65/GRC, but have never
> had all of them spread out together to try it.
>
> This would put together a nice green receiving machine with HF and VHF
> coverage, as well as a flea power 6m simplex FM rig.

As to prices in the USA, I could not help you. In Holland the RT-70/GRC
went for under ten dollars recently, in a surplus shop. Same for the
C-375/VRC, and the R-109/GRC was twenty bucks at the same place. But
those items are a lot cheaper over here, it seems.
However, my reason to react is to warn you that in order to hook them
all up you will need a mounting, in order to make all the electrical
connections. There are a number of different mountings available, that
normally would also accomodate a RT-66/GRC tranceiver. Or one of it's
companions, the RT-67 or RT-68. Without a mounting and the special cable
WM-46/U it is not feasable to hook up the C-375/VRC.
However, the R-109/GRC can be used stand-alone - it has a power-in and a
system connector for the mounting cables, with a special plug on this
connection it becomes autonomous. Same for the AM-65/GRC and RT-70/GRC -
they can be used as a stand-alone unit. But basically, without the
proper mounting you have half of a system...

Cheers, Wammes

Yes, second Saturday which is 3/11/00. Bring at least $2.00 for
parking fees. It is a $25.00 fine if you do not pay parking. Park only
in a proper parking space. There are several very large parking lots
there. Try to use one of the "solar powered" parking slip
dispensers. The mechanical ones do not always work.

Start time is early. Best stuff is avaliable before 7 AM. Remote
possibility of rain but this meet will still run. This will be the
first one this year so there will be a large turn out.

Livermore runs the first Sunday of each month at 7 AM start time, all
year (except when the parking lot is under construction).

http://www.aade.com/hampedia/hampedia.htm will give you an idea what they've recently sold for. Seems like the $150 average listed there is in the right ballpark. Also check out the review of the SX-25 at the Hallicrafters Association http://www.hallicrafters.org/Reviews/sx25.htm

>Arnold Goks&#65533;yr

Arnold!

it is strange, you don't see such info. Hope some day I could have a
site to inform about some technical detail, but the problem is that
somebody might call by telephone believing that anything can be bought
provided you pay enough

Had one guy offering me all sorts of rubbish in exchange for a rare
receiver he desperately needed for somebody in Germany, he called
twice per month over a year or two, and I refused to talk to him, but
he continued

only info seems to be (as you know) www.nrhf.no

I found it strange that I rec'd email from USA requesting info about
Torn.Fu.d2, but I have never mentioned this VHF-transceiver at all on
any newsgroup

It was a lot of books available in Germany, but seems that DL6VW isn't
available any more, he had some good copies, and the most interesting
book written by DL2IE/Gerhard B. Salzmann: "Kommerzielle
Nachrichtenger&#65533;te von 1914-1945
it is 107 pages with columns of any Ex-German equipment and the valves
used . I am aware that you have some info to add to this book, was it
6SQ7 or 6V6?

1627. antique tubes for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-25 00:00:00 UTC
From: Steve Fried <k2pts@home.com>
Message-ID: <388CF40C.53552827@home.com>
Source record: 72330

Hi

Following tubes have been tested in a Hickok 6000.

RCA Radiotron 1610 (the heavy duty transmitting type 47) $10 ST style

Roytron 247 Globe type $15
RCA Radiotron 47 ST style $10

RCA Radiotron St style 46 $5

Cunningham CX 10 Globe style $40
Cunningham UX310 Globe $40
Boxed in original Audion deForest box, type 410 $45
deForest 510 Globe $50 this is the special aircraft type which is
reinforced

Cunningham 6A6 ST style $5

Taylor (old style) 866 $10

Cunningham 19 st style $5

RCA UX245 Globe style $15
Cunningham CX345 globe style good but low output (comes in original
box) $5

ARC-51 $8
(full wave battery charging rectifier)

85 Miliamp rectifier similar to Raytheon BH $10
Cunningham BH $10

Ken-Rad JAN-CKR 6B4G $7.50

I will entertain ridiculously low price for everything in one large
package. It would save me lots of time.
I don't get upset nor angry. So make an offer for the entire lot.

Above prices do not include shipping from Chicago IL 60193.

Regards,

Steve k2pts

From: tubecntral@aol.com
Message-ID: <20000125015620.28560.00000484@ng-cg1.aol.com>
Source record: 72337

Hello, from "WCRW" (am? fm?) , one 4-400 C / 6775 Amperex
RF output tube here, in all it's original type packaging, and states
it tests OK, date 10-20-95 on it's box. It probably had some use.

The tube is branded by National Electronics (Richardson), but is
a true Amperex France-made tube.

I ohm-metered it and it looks good. Will sell @ 60.00, shipped in USA 48.

Satisfaction on arrival guaranteed, or all it costs you is postage to mail it
back to me in the same condition as when it left, undamaged with intact
filiment and no shorts and get a prompt refund.

Please respond privately. Thanks!
Regards,
Joe Pratt, Tubecntral@aol.com

One of my friends - VE4KQ - has inherited two of these rigs
from his father, VE4HJ SK. One of the units works
perfectly, while the other appears to have a few problems.

Can anyone on the Newsgroup contribute any information on
this unit, in terms of what it was used for, dates of
possible manufacture and use, output power and so forth?

Any intelligence would be much appreciated.

My Brother-in-law has 2 radios for sale...

One is a BURENS, somewhat like a Grundig, but a bit up market... It has the usual bands, SW/LW/MW/UKW, but the tuning pointer is selected by the band switch.... So you can tune it over the bands, and the last station you heard on a band is held... Some time about 1968, I think...

Sexy! I have run it up and it works fine, including the Tuning Indicator.... A very nice tone, and the <REAL> wood case is in 9 out of 10 condition... I would have it but my thingy is Mil Radios...

The next one is one I have seen before, a solid state PERDIO, only Long and Medium waves, in a plastic simulated wood, runs off of a large 9v battery.... Works..... Nice piece.... Large....

Richard is on 0181 647 3088 (London), or e-mail me here......

Hi all

I have to clear out 2 items from my shack in order to get a new one...

Redifon R408 Ships RX, solid state, circa 1966, in excellent electronic and mechanical order, a crack on the dial plastic, however. It has been realigned by myself, and is at least as good as my Kenwood TS440S on receive..... (But at least 4 times the size!) Covers from 38kcs to 28Mhz AM/CW/SSB. Service manual included.

A Post Office Radio No31A, cleaned, works, a set of batteries to put in, AM/FM/CW, covers from 31MHZ to 250MHZ, was used as a Field strength meter as well as a TV licence evader detector, 30 odd MHz was the TV IF in the good old days. Complete with case, some connectors, calibration charts and an antenna. Date about 1960 something. The RF heads were made by Eddystone, I am not sure of who built the rest. 240 volt charger that also works the set built in.

Both these Rxs are very heavy, and MUST be collected.... They are probably a bit fragile to ship....

Offers, as something is a coming from PA land to occupy the space consumed!

Source record: 72209
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.swap

I have this marine equipment available (I too would love to have a Mackay LF rig - they were gorgeous rigs):

Circa 1981 Scientific Radio SSB Marine Radio-Telephone, 1-KW Linear Amplifier, and Antenna Coupler for sale. All service manuals are available.

This is a continuous coverage (1.5-30 mHz) 10 channel crystal controlled system that was built for severe duty at sea. The tranceiver delivers 150 watts PEP (100w continous) to a 50 ohm load. It is capable of AME, CW, and FSK. Power finals are 3 6146A's.

The Linear is a servo-controlled unit running twin 3-500Z triodes and is capable of 1-KW keydown *output* into a 50 ohm load all day long.

The antenna coupler is also servo-tuned and will handle everything from a bent coat hanger to a long-wire at full power.

Tranceiver: SR-210MD - 8 x 16.5 x 17.5 inches, 50 lbs, 115/230 vac
Linear Amp: SR-110B - 20 x 22.5 x 50 inches, 260 lbs, 115/230 vac
Ant. Coupler: SR-650 - 24 x 20 x 10 inches, 73 lbs, 115/230 vac

This is a rather heavy-duty project package. Converting to amateur frequencies is a trivial thing. Cabling diagrams are included in the books. This system was working fine when it was decommisioned from a local tug boat fleet.

It's big, it's heavy - if you're not in the Pacific Northwest it is probably not worth the freight to get it to you.

Make an offer!

1662. Drake R4B tech. Question re 1st IF filter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-26 00:00:00 UTC
From: "Brian M. Miller" <miller@spk.hp.com>
Message-ID: <388F26BC.EC710734@spk.hp.com>
Source record: 72215

I have a Drake R4B receiver and have owned it for many years. The receiver has a passband tuning filter and I recently observed that signals were louder when tuned on the upper sideband vs when tuned on the lower sideband. Initially I suspected the passband tuning filter so I removed the assembly from the radio and tested it thoroughly. The filter is fine. When tuning from USB to LSB, the gain is constant.

Subsequent investigation led me to the crystal filter in the 1st IF. The receiver uses a first IF of 5.645MHz, and a 2nd IF of 50KHz. When I tuned across the crystal filter I discovered that the signal was relatively constant for 4 or 5 KHz below 5.645MHz, but started to roll off almost immediately above 5.645MHz. The 1st LO is greater than the RF input signal so the 1st IF spectrum is inverted. I.e. lower sideband signals now appear above the 1st IF frequency and upper sideband signals are below the 1st IF. I believe the 1st IF crystal filter is responsible for the attenuation I observe on the LSB signals so I removed the crystal filter expecting it to be defective.

The crystal filter is fairly simple and is comprised of only 2 crystals. One at 5.642MHz and one at 5.645MHz (the crystals are labeled). I havenï¿½t yet had a chance to bench test the filter yet, but I am surprised by this choice of xtal frequencies. I expected the xtal frequencies to bracket the IF but this is not so. One of the xtals is exactly at the 1st IF (5.645MHz), the other is 3KHz below. Hence I would expect the crystal filter to be biased toward frequencies below the 1st IF. But this doesnï¿½t make sense. Why is the filter biased this way? Maybe my receiver is not defective. Maybe all R4Bï¿½s have less gain operating on LSB vs USB, but I find this hard to believe.

Can anyone shed any light on my mystery?

Thanks

Brian NI7P

WHY do these flea markets begin so early? I've heard of sellers inspecting other sellers goods with a FLASHLIGHT before sunrise.

For us people that have to travel >100 miles to attend, early flea market openings are the pits.

AMPEX Corporation used to host an evening flea market in their cafeteria - and it was usually jammed. Wish they were still around.

More on mineral spirits. It is what used to be used as a dry cleaning fluid and was called "High flash point Stoddard solvent". It is available in hardware stores for about $1.60 a gallon. It is packaged in pint and quart cans as charcoal lighter and sells for $2 a pint. It is also called odorless kerosene and is sold as lamp fluid in fancy bottles, sometimes with added dye for color.

Having said that, DO NOT use it in a dummy load.

1917 Kennedy model 281 shortwave receiver. In excellent to mint condition with original headphones. This is a beautiful example of the state of the art shortwave radio from that period. In cosmetically beautiful and electrically excellent condition. Wooden case, controls, all original and I would put this machine in the 9 to 9.5 category. Original tubes, circuitry. For a Machine this old its really spectacular. Email if interested and I can also email a jpg photo to interested parties. Asking $500 for this rare and beautiful piece of radio history.

Thanks.....Bill

1666. FS on eBay: Service Manual, TS-820

This petition makes complete sense!
One has to wonder why there are so many folks out there that want access to the sliver of band(s) that Extras "EARNED?" Fine, allow Generals 5wpm, but why would anyone, unless they're truly into the hobby and are proud of their license, want that tiny slice? They'll either get blown out w/their low speed or do nothing but creat havoc. I'm open to any reasonable and logical argument, but I've yet to hear one???

Hello Everyone,

I would like to find a WWII USN TCK transmitter. Have looked for years and have had no luck. This old rig used a pair of of 813's for finals and was rated nominally at 400 watts out.

Since I have been unable to locate a TCK, I am also looking for something similar. Say an ex commercial rig like a Mackay Marine that uses a pair of 813's.

Wish I had all the parts, I would build a transmitter using a pair of 813's. If you know of a homebrew one that needs a home let me know.

I would prefer a real grid driven transmitter. Not a GG rig. I do need a power supply (both plate and for the screens), control circuitry, a rack cabinet etc. Guess what I am saying is if you know where I can locate any part of transmitter, I might just be interested.

Ah heck, it does not even have to run a pair of 813's. Just be in the 500 watt output range, cover the ham bands, and I do not need any kind of modulation system since the rig will be used on CW.

I would sure like to find something in the PNW. The shipping cost of one of these big rigs can get a wee bit spendy, besides the hassle one has to go to just to pack the thing.

If you have any info, drop me a note at basalop@gte.net.

1680. D-104 mic parts needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-26 00:00:00 UTC
From: Gary - KJ6Q <davison7@gte.net>
Message-ID: <ahLj4.1200$ag.21768@dfiatx1-snr1.gtei.net>
Source record: 72233
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

I am in need of the male and female plastic connectors that connect the Astatic D-104 head to the mast - both are damaged in one of my mics, and must be replaced. I *don't* want or need a complete mic - only one or both parts, depending on what may be offered. I am aware there are near-substitutes available at audio stores, but the are NOT exact matches, and their use prevents interchanging other D-104 heads, and I use several. Naturally, I'll be glad to pay a reasonable price for the parts/shipping.

Thanks.

Hi, to make a pair, I need a single, solid-shield Raytheon ' Bantal' 6SJ7 GT series tube, unused in it's original , colorful box.

ALSO, does anyone know the history of the 'Bantal' Raytheon tubes?

If you have one of these, or else a pair of Raytheon JAN 6SJ7 GT mesh-shield, I want to hear from you. Kindly respond via email.

Regards,
Joe Pratt, Tubecntral@aol.com

Have you tried going directly to Astatic? They are still around and I
recently purchased a new crystal element for my unit. The can be
reached at:

CTI Audio, Inc.
341 Harbor Street
P.O. Box 120
Conneaut, OH 44030
(216) 593-1111
FAX: (216) 593-5395

Their web site is http://www.ctiaudio.com/ (although www.astatic.com
seems to work also but has some bugs). Their tech support can be
reached at support@ctiaudio.com.

From: Radio Randy <rjones@theofficenet.com>
Message-ID: <qnRj4.735$ov1.66476@news.uswest.net>
Source record: 72242

Hi Gang,

I've just listed a lot of 6 early (1930's) copies of the rules and regulations governing the Amateur Radio Service. Some are from the Federal Communications Commission and some are from it's predecessor, the Federal Radio Commission. There is also a copy of the International Radiotelegraph regulations from 1929. You can see the whole package at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=247193247

Bidding starts at a low $2.99. Thanks for looking!

Radio Randy

1698. FS: Novar tube sockets (for 9-pin sweeps)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-27 00:00:00 UTC
From: ovrreactor@aol.com-nospam
Message-ID: <20000126220139.10911.00000120@ng-fu1.aol.com>
Source record: 72101

I have WAY too many novar (9-pin) tube sockets, so I'm selling my excess.
These sockets fit 7868's and 9-pin sweep tubes. They are saddle mount, with
solder tabs (not the cheesy PC type).

I'm asking $1.50 each (minimum 10), or 100 for $125.
In case you want to see what they look like, there is a picture posted at;

http://members.aol.com/Reactor001

Interested? Please respond by email (remove "nospam")

Regards,
Tom Mitchell
email - OvrReactor@aol.com

1699. FS: AN/PRC 126 current military tactical manpack transciever

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-27 00:00:00 UTC
From: Joe Davoli <jdavoli@erols.com>
Message-ID: <86olqr$fv2$1@bob.news.rcn.net>
Source record: 72102
Cross-posted to:
alt.ham-radio.marketplace,alt.ham-radio.vhf-uhf,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

The AN/PRC-126 is a small chest or belt pack man portable tactical band radio set, made by Magnavox Government and Industrial Electronics Corporation. This is a current issue set. It covers 30 to 88 MHz in 25 kHz steps (FM mode ONLY, carrier squelch with 170Hz tone on tx to activate squelch on other military radio sets.) Fully synthesized and programmable from it's front panel, you can program 10 simplex channels of your choice into the memory, and select them via a rotary channel selector switch on top. Illuminated LCD display of frequency on front panel It is 9.97" tall (with battery box, less antenna,) 3.78" wide, and 1.52" thick, and weighs 2.6 lbs. including battery and rubber antenna. 70 hours operating time with lithium battery, and 14 hours with a Ni-CAD. Has tiny internal speaker and microphone (PTT on case,) with standard military connector on top for any military audio devices such as handset, microphone, headset or speaker. 2 watt max RF power output, but vehicular PA available to 15 watts. Radio has antenna tuner built in, with rotary switch for different segments of it's range to
match the two portable antennas, and a selection for a 50 ohm external antenna.
Radio will BEEP at you if you do not have antenna switch in proper position for
match with selected frequency.

My unit is in way above average condition for it's type typically seen. Small ding or two on battery box are the ONLY marks on it. The little data plate on rear is missing. This one will come with TWO BA-55/88/U Lithium battery packs, issue olive nylon chest / belt pouch with pockets for spare battery and second antenna, the 7" flexible rubber helical "short" antenna, two piece "long" antenna (AS-3575) consisting of flexible gooseneck base and folding metal tape or "blade of grass" whip, an H-250/U handset, AND a M-80C/U hand microphone. An original Department of the Army Operator's Manual will accompany the set as well. Fair Radio Company in Ohio now has rechargeable Ni-CAD packs for this radio at around $35 each.

I have seen these sets advertised for $600+ at some dealers, with NO accessories of any
type. Pick up this complete set, ready to go, for $475 shipped in the U.S.. I can e-mail a poor,
military picture of the radio and accessories if needed.
No sales overseas.

Thanks for reading!

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

From: Doug_Hensley@generalhealth.ORG
Message-ID: <706685429@generalhealth.org>
Source record: 72115

I am looking for a few old Collins manuals/schematics to their commercial audio (broadcasting) pieces such as their 116F passive equalizer and their 6X-2 (or relative) isolation line amplifier. If anyone can recommend a lead or two I would appreciate the information. I have checked with both Collins and the company which purchased their Commercial Broadcast division (Continental Electronics) and verified that neither have this information anymore.

This equipment was probably made in the late 30's but could have also been produced in the 40's.

Thanks in advance for any assistance,

Doug Hensley

>>WHY do these flea markets begin so early? I've heard of sellers
>>inspecting other sellers goods with a FLASHLIGHT before sunrise.

>That's because automotive swap meets start around tennish. Been around
>lots longer than radio swap meets and we ain't fools 8*).

Anyone in the New England area is welcome to attend the Greater Boston Antique Radio Collectors' meet on February 20. There is NO "dealer setup" (read, "dealer stockup"): everyone gets in at exactly 8:00 and has an equal chance at finding good deals. The system must work, since this meet gets larger every year: 870 attenders last year.

In fact it's so large that John Terrey and Antique Radio Classified volunteered several years ago to run it, after we outgrew the private school where it used to be held. I'll have a table of ju, er, treasures to unload.

73, Alan

>
But since you have the converter, wouldn't you be better off building
a simple six meter transmitter? The Sixer is relatively low power, and
uses as little circuitry as possible. If I remember properly, the original
Sixer even used 50MHz overtone crystals, something that you'd have to
dig around for, while the "A" model used 8MHz crystals. One could duplicate
the Sixer transmitter for virtually nothing, so long as you have the tubes,
and you wouldn't have to deal with disabling the receiver in the Sixer,
which you'd probably want to do if you are using a separate receiver.

not really, but interesting to read your note about the xtal filter,
possibly the same for R-4C, so it could be an interesting experiment
to see if it is possible to build a simple 4 or more xtal ladder
filter to improve this, instead of buying one from Sherwood
Engineering as mentioned in HR 11/77(?)

*For R-4C the LO (4.9-5.5MHz) is 80dB stronger than an S-9 signal on
the input of the 5645kHz IF, might be the same for R-4B, so it may be
difficult to do certain simple measurements, it might lead to some
problems

I have a Swan Model 210 VFO listed on Ebay. This unit can
be used with a Swan model 250 or 250C 6 meter transceiver.
This is my personal equipment and is in very good condition.
Thereï¿½s no reserve and the bidding starts at only 25.00

Regards,
Jeff

1730. BC-611 Phantom Antenna Information

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-27 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <3891177F.A9D2AC8C@ix.netcom.com>
Source record: 72133

Someone was asking for information on building
one of the phantom antennas that go with the
test set used to set-up the BC-611.
I can't remember who it was, so hope this will
get to him and other interested parties.

I've posted photos of the unit with a ruler for
dimension at:

http://www.arc5.com/meter1.jpg

and

http://www.arc5.com/meter2.jpg

I outlined the flat bakelite plate in white so you can
better get a feel for the dimensions.
The tuning shaft for the variable that comes out of the front
is made of plastic or other non-conductive and is several
inches long. The idea is to keep your hand capacitance
away from the antenna while tuning. The variable cap
is 8 picofarads. The other values should be available
in the manuals.

Hope this helps.

I sent my first message before I saw this one. I ran a TR-4 for years
on a homebrew supply that I made from an old TV power transformer (circa
1955). The voltages are not critical.. I was running nearly 800 volts
on the final plates.

Pickett, AD4S

I'm not a real electronics type but looking at the schematic leads me to
believe this is voltage doubler circuit. Since this is not a center
tapped secondary and the rectifiers are not a standard full wave bridge
configuration. If you would like I can unbox mine and put a meter on
the output of the transformer. The low voltage supply looks the same to
me so the secondary there may be 125 volts. The bias supply is just a
half wave bridge.

Hi Pickett,

I know you can home brew a supply, or use nearly any of the various ones that went for the drakes, the heaths, etc. It's a good suggestion and we may end up doing that. I'm just trying to find out whether the voltage out of this transformer is low or not for the troubleshooting of this supply.

The cheapest fix would be to replace a part in this one - but so far, the only thing I'm really suspicious of is the transformer, so I was hoping someone with experience on this supply might be able to tell us what's normal vs what we are seeing. I'm generally unfamiliar with the voltage doubler rectifiers, so I don't really know what voltage in produces what voltage out. If it's the transformer, the cheap fix is probably finding a replacement supply. If the transformer voltage is normal, we can replace everything else in sight for $20 or so.

Thanks

Kevin

If you've got one, it does save you the metal work. There couldn't have
been much difference in circuitry between the Twoer and Sixer.

As for mods, if you consider all the articles that were printed about
modifying those units, finding one that hasn't been modified might be
the exception rather than the rule. I seem to recall reading about
a mod to turn the CB version into a Tener, before Heathkit saw the potential
in putting the basic idea on the ham bands. They were simple units, so
modifying them was relatively easy, and even a requirement in some cases.
They and the more sophisticated simple AM rigs like the Gonset, probably
did put a lot of people on six and two back then. And of course, when six
opens up, you don't need a lot of power.

There was a 6M AM transceiver described in Communcations Quarterly sometime
during the past few years, and then later a similar unit for 2M. In power
level and selectivity, it was similar to so many of those cheap VHF
transceivers of yesteryear, like the Gonset Communicator. There was
always
a tradeoff between simplicity and performance. If you want a tuneable
receiver at 50MHz, but only single conversion, you either have to have
a complicated oscillator, or a wide IF. The unit in CQ haed an IF at
10.7MHz, but unlike the units of yesteryear, used two cheap crystal filters
so at least there was a good shape factor.

Maybe sometime I'll get around to building it, or something sort of like it
using parts I have on hand. The idea of a portable that I can take up
to some height with a simle antenna is interesting.

Power supply not included missing original VFO knob.$70

1753. one pair NOS VT-25, 10Y Sylvania JAN tubes FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-28 00:00:00 UTC
From: tubecntral@aol.com
Message-ID: <20000128184840.03695.00000026@ng-fi1.aol.com>
Source record: 72055

One close, strong gM pair of NOS VT-25 10Y Sylvania JAN brown base, ceramic supports, black plates. Mint cond., full getters. On a Hickok TV-7 tube tester, the minimum for 'good' is 38, these tubes measure 83, 84.
Out of a bulk case of 12, not individually boxed. I'm keeping the other two pairs left for personal use. Will be wrapped safely with bubble wrap for shipment.

Price 88.00 for the pair shipped in USA, others at airmail rate depending on location.
Please respond privately via email.

Regards,
Joe Pratt, Tubecntral@aol.com

I am going to take a wild guess here but my experience tells me that you should have the same voltage across each of the 125 mfd capacitors and the total will be equal to 650 volts. One of my AC4's with no load does 715 volts dc. I would sub in new caps.

Gary

To the Old Transmitter gang,
I have a CE 200V transmitter for sale. It comes with a case and is in good cosmetic condition. Electrically it puts out about 60 watts on 75 but is intermittant on the other bands. It has some battery staining on the chassis and the VFO slips somewhat. This would be a very good restoration project as I believe all vital components are OK. Scope works just fine. Comes with a repro of the manual.\
Price is $350 plus shipping from Clarence, NY near Buffalo, NY
Please let me know if you are interested.
Thanks and 73's
Bill Gittere K2LNU

1761. R-390A's in "Orange" colr scheme?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-28 00:00:00 UTC
From: "George R. Gonzalez" <grg1@flash.net>
Message-ID: <de5k4.9859$rl6.195334@news.flash.net>
Source record: 72145

Way back about 1980, QST showed a picture of some
North Vietnam "Museum" that had some captured
US radio gear. Included were several R-390-looking
boxes, but with a burnt-orange or goldtone front panel!

Was this some quirk or color photography,
Viet Cong humor, or some strange jungle-proofing
varnish?

Sometimes I think of this as I'm driving to work.
Help me keep my mind on driving by coming up
with a reasonable answer.

-Regards,

George

1765. Intelligibility - important factor for equipment (at least for mine)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-28 00:00:00 UTC
From: LA8AK@online.no
Message-ID: <3890e9c5.2625470@news.online.no>
Source record: 72149

Improving intelligibility of receivers/reansmitters:

Remember in 1969 LA4O radio club were running a radio shack at an exhibition (LA1X) using a brand new Trio transceiver (not TS-500), and all public seemed to avoid us, but LA2DL installed his Drake TR-4, and suddenly it went rather crowded around the stand

Have been interested in how to implement good agc performance in my equipment, this happened after I got my first Drake 2-B receiver in 1969. I often wondered why Drake receivers have extraordinary good AGC performance while several manufacturers did not care for it until mid 80's.

The following cures have been found:
Trio TS-500, this is the worst agc I have experienced
Cure: Add a 22k resistor in series with large time constant capacitor (0.5uF?)

Yaesu FL-dx-500 (TX)
vast improvement on TX performance (intelligibility) was obtained with similar cure as above, believe it was 22k in series with 0.1uF capacitor in the ALC circuit Local English stations reported "now I can understand your English much better"

Heath-Kit SB-300/SB-301
Some AGC improvement is to use 1N4148 diodes as AGC detector, AGC voltage increased by a factor of two for an S-9 signal with SB-301. SB-300 was replaced by the 2-B, and I did not try AGC-improvement with it.
Also found another problem with SB-301 (SB-300), it is mentioned in Radcom TT(G3VA) in late 70's. RF amp (6BZ6) is unlinear, causes intermodulation. Grid 1 draws current, because it is too little bias voltage. Increase the screen voltage to 120V and cathode resistor for the same anode current as before.

Collins 51-S. (for SSB-only)
insert a 22k resistor in series with 0.47uF across the AGC-line. This is good for SSB and CW only, to include AM makes it more complex, but with the simple modification AM receiption with QSB it is worsened.

YAESU: FT-901/902 and FT-7 seem to work satisfactorily, while FT-726 and FT-736 seem to need some improvement. Worst problem with FT-726 seems to come from product detector, wrong supply resistor.

TRIO/KENWOOD TR-7010. Did some AGC improvement (in principal similar to Drake TR-4), but the main problem is that product detector diode ring is biassed, remove this, and remove the two 30pF balancing

capacitors to increase BFO drive level.

YAESU FT-101/101B, FT-221/FT225: AGC improvement failed and the reason seems to be rather strong carrier leakage which follows through the IF, seems almost impossible to cure. I did some extensive tests with FT-221. Carrier connection could be removed from the product detector and still SSB signal could be read as before. One suggestion for AGC is plessey SL-621/1621 audio derived AGC, but still IF signal is distorted, see HamRadio (abt R-4C)

R-4C: It is a problem with something which looks like carrier leakage, seems to be variable, may derive from xtal oscillator. Difficult when a separate product detector with 10kHz off-set BFO is used for cw meteorscatter receiption. This is mentioned in HR, but I don't agree, still it is very bad IF distortion without any connections to the product detector - whatever type is used, original or one using MC1496P.

73 Jan-Martin LA8AK

From where I sit it is YOUR kind who is killing the hobby whining for it to be YOUR way (The CB way apparently).

I saw not much in the NPRM to object to other than the suggestion of keeping the ill-conceived and much abused 'disability waiver'.

As for the rest what is your problem with it? How is someone 'kept out of the hobby' if the EXTRA class license retains the 20 wpm requirement?

Hmmmmmm?

> If you can't changes with the
> times maybe it's time for you guys to get off the air and find some
> thing else to do .

And I could suggest that if you want CB you already have 11 meters.

Who is ramming anything down your throat? I do not like Packet, yet I
had to be tested on it. Was that 'ramming it down my throat'? Hmmmm?

Retaining the 20 wpm requirement for the Extra class is not ramming
anything down your throat. It is 175 kHz for crying out loud!

What a baby you are! What a whining, crying baby.

> The FCC has changed ARS to permit more people to enjoy it.

Yeah, like it changed CB. Thanks, but no thanks.

> What is wrong with that ?

Seen CB lately? I rest my case.

> I think it will be fantastic to see the bands crowded with new
> people to talk to.

Didn't happen with releasing the questions and answers. Didn't happen
with no-code. Didn't happen with the cheater waivers. What makes you
think it will happen NOW?

> FIeld day will be wonderful. Lots of members for the clubs.

I have not noticed much increase in club membership. In fact local clubs
are at record lows compared to membership of 12-15 yrs ago.

Your whining selfish BS is killing the hobby all the while you lie when
you claim it is helping it.

A real interest by the community.

If they had a real interest in the community they would not need to have
the bar lowered to the ground.

> Probably more incentive to manufacturers to design new equipment.

THAT is the motive force in all this... sell more radios to appliance
operators.

Sorry... not much quality in all your alleged quantity. I have not seen
much quantity either.

> Lets stop trying to pretend it is "The Olden Days". 5 words a minute
> is adequate.

Adequate for what? Spending all day in a QSO to just exchange the
basics?

> No one says that you cant use a faster speed.

And no one says you have to have an Extra class license if you cannot
pass a 20 wpm code test.

Hi Fellas;
I have for SALE:
Almost mint TT Omni VI(not +)with matching speaker supply and manual.
Included is a 1.8 SSB filter option. This is off the top of my head and can
supply actual Model numbers or S/N's later!
Am assuming this because when I press 1.8, you can hear it narrow down a bit.
Only problem is that there is about a 5-7 watt carrier on LSB only. I am not a
tech and have not even attempted to adjust this as I am sure it can be. I do
not have any paperwork.
Price is $1300ppd Conus.
A great deal! Cost was about $2499.
Thanks es 73....Rich WA2RQY (1961)

Source record: 72162

Damn the weatherman, Full speed ahead...

The CC-AWA Winter Swap Meet WILL be held this coming
Saturday January 29th. in Columbia SC.

There is really no date that we could reschedule to that wouldn't
conflict with some other event.

If the weather is as bad as the weatherman is saying could be,
PLEASE be careful driving there. As much as we all love
old radios, going to a swap meet isn't worth getting hurt over.

PLEASE DRIVE CAREFUL.

Use you BEST judgment about attending if the weather is bad.

Below are the details about the meet is case you need them.

73,

Ron

- -

CC-AWA Winter Swap Meet, January 29, 2000
Caughman Park, Columbia, SC.
The park opens at 8am so there's no reason to arrive early.
This is a FREE event, NO admission, NO setup fee.

Here are directions for the 29 Jan swap meet at Caughman
Road Park in Columbia, SC.

>From I-77 go to exit 9 if you are coming from the south and 9A if you
are coming from the north. Either way you are at US 378/76 EAST,
also called Garners Ferry Road.

>From I-26 go to exit 116 (from north or south). This is the southern
end of I-77. Go north 9 miles to exit 9 and follow directions above.

>From I-20 go south on I-77 from either east or west on I-20. Go to
exit 9A and follow directions above.

At I-77 and US 378/76 there are several motels and restaurants.
Motels include:

Holiday Inn Express 803-695-1111
Days Inn 803-783-5500 or 1-800-325-2525
Hampton Inn 803-783-5410
Economy Inn 803-695-3485

Sleep Inn 803-776-6263

To get to Caughman Road Park:

Go east on US 378/76 from I-77 4.5 miles to the seventh (7th) stoplight, including the one at I-77 and exit 9, but not the one caution light.

Turn left on Trotter road and proceed one (1) mile. You will see the main entrance to the park on your left. DO NOT ENTER HERE.

Go to the next street on your left (about 300 yards), which is Caughman road and turn left. Go about 200 yards and there is a parking lot and a large covered picnic area on your left. This is the place.

We have this part of the park from 8 a.m until noon. DO NOT ARRIVE BEFORE 8:00, please.

Restrooms do not open until 10:00 so lay off the coffee.

Information Carl Shirley 803-776-6850 or shirleyc@garnet.cla.sc.edu

Are you as so retarded to think of ham radio as CB? With a mantallity of yours, It wont be long till your kind actually cause it to be run like CB. Its not about keeping people out of the ham radio hobby, In fact it is those who want to upgrade and can due to them knowing the answers to the written exam, thus having the inteligence to pass it without doing 20 wpm. 5wpm is great for all license classes and still shows that you have the ability to copy the code. Why should others that can copy code be held back from upgrading to Advanced or Extra? Would you feel better if they eliminated all classes of license except 1 which would be tested on the technician only exam with no code and then an Endorsement of 5wpm, 13wpm, 20wpm? That way we can all be technicians, operate on the same bands as all others but still have the ability to wave our 20wpm Endorsement around like it is the Confederate Flag. In a simple quote, "This is not Burger King, You can't have it Your way". I accept the change, You should spend more of your time voicing your opinions to the FCC and ARRL and also to those who support your thoughts to see if you can come up with a league of your own to fight these decisions the FCC has made instead of wasting time here arguing nonsense.

Make anything like 13wpm or 20wpm an Endorsement but still keep the 5wpm requirement for any class above Tech.

These are average responding AC voltmeters calibrated in RMS volts (not a true RMS meter) they are commonly used by audio techs. to measure anything of interest such as input or output voltages of an amplifier or other device. Also useful for monitoring the output of sine wave oscillators. I believe these are accurate to around 4 MHz or so. There are several versions, both rack and "bench" variations. The 400-D is the same electrically, but with a smaller, less accurate meter movement. HP made these for decades. If you go after a manual (highly recommended) be sure to note the serial number of your unit and buy the corresponding manual. The circuit is an AC coupled amplifier which drives the meter. The output signal is available at the "output" terminals (connect to an O'scope , chart recorder etc.) Most of these units will require replacement of the coupling capacitors to function properly. Some tubes are critical as to gain and microphonics. GET THE MANUAL ! Good Luck

I have a very clean TM-421A 440 mobile rig FS.
The backlight is out, the memory doesn't hold and the receive is very weak.
On the plus side, The transmit works, tone encode works, squelch, etc.
Good output power on a Bird. Comes with mobile bracket, manual and DC cord.
No mike included.
Bought at a fest as working.....AS-IS $73 shipped USPS Priorty.

1787. New "Transceiver Class" license

I think the FCC just came out with a new Transceiver Class license for ham radio!!

For the convenience of all amateurs, the new Transceiver Class ticket is actually packed in with the radio, just like in the old CB days!

The FCC finally has some new programs, this is great.

Now you just unpack the transceiver, plug it in and connect the antenna. Tune in a station till it sound good and then talk.
Nice and easy.

My all new transceiver is all bands 160 meters thru 440mhz and is ready to go. It has an all band antenna tuner and it's automatic.
All I had to do is unpack it and talk! Wow!

I tried to find a plug thingee for my straight key, but I think that's now an option. Who cares. I threw out the morris code clicker cause I aint never gonna use it any way.

This new license is great. Has anyone else getting a new transceiver gotten the Transceiver Class ticket? Makes ham radio great, just like my old CB days.

See yall on the flip side!

Steve

Why don't you ask Jane Fonda?

She would tell you that the orange color designated the equipment was part of a crypto comm circuit. It was painted orange to remind radio operators to spin the dials and destroy the equipment (usually with a fire ax - also painted orange) if the fire base should be over taken by the enemy.

What that nice picture in QST is really showing you is that Charlie got lucky and one or two kids were killed before they could accomplish this task.

Thankfully, blood and brains clean up nicely with a sponge.

Now dream about Jane modeling an ack-ack gun in Hanoi... -D

When I talk about the feds, I'm talking about the democrats and the
republicans. There's not a dime's worth of difference between them.

When the democrats are in power, they take away economic freedoms.
When the republicans are in power, they take away personal freedoms.
Result: Erosion of *ALL* freedoms. They each take their turn.

Help! Please!

I have a Mercury model 204 tube tester. It's one of the old drug store types. I realize it's not the best way to test tubes but it's all I have for the moment. (Good tube testers seem to be hard to find). Anyway, It tests smaller tubes fine. 12AX7, 12BY7, 6EA8 ect..... It test's large rectifiers fine. 5U4..... ect. What it dies out on is larger multi-element tubes like 6146, 6L6, EL34. When I try to test one of these tubes, the meter pegs all the way to the low end of the scale. Occasionally, (rarely), I'll catch it in a good mood and it will test one or two of these tubes before going into peg the meter mode. If anyone knows what might be wrong with this tester, I'd appreciate any insight. Also, Is there anywhere I can get a schematic for something like this?

thanks

rod

Fred, I could do as you say, but as Ham radio turns to Shit over the next
12 months, those 30-50 year olds won't want an amateur license because
they be able to hear the same thing on CB for free!

1805. Drake TR4 power supply problem, question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-28 00:00:00 UTC
From: "F. Feeney" <fkf1@cornell.edu>
Message-ID: <86sppb$k92$1@news01.cit.cornell.edu>
Source record: 72189

Hi,

I've got a friend with a Drake TR4, and the AC supply. Recently the transmitter stopped making output, and we traced it back to the power supply, which instead of making 650 volts on the high voltage, now seems to be making only 250 volts. All the other supplies (low voltage, bias, filament) are fine.

We checked the diodes in the voltage doubler circuit, and the caps seem ok. The voltage doubler does seem to be doing the doubling thing, the voltage across one cap is about 120, and across the output cap it's about 250 - so I don't think the doubler is bad. I'm beginning to wonder about the high voltage winding on the transformer.

We lifted a lead and we get about 250 vrms - but I'm not sure if that's right. If we take 250, multiply by 1.4 for cap input filter, and then consider the voltage doubler, that comes out about right 250x1.4x2=700. But maybe voltage doublers don't follow the cap input rule? I don't a handbook here to check on what the design formulas are for those kinds of rectifier arrangements.

Does anyone know what the high voltage secondary RMS ac voltage should be? Is there a common failure mode for these supplies that we're seeing? Any sources for replacemant transformers if that turns out to be the problem?

Thanks in advance

Kevin, WB2EMS

Does anyone know the secondary voltages for the power transformer for a Drake AC-4. I don't seem to have the 650-volt output at the plug and the diodes check ok.
Thanks
Doug

I've been looking for a nice Heintz and Kaufman box for display (I'm not related, but thought it would be fun anyway).

I recently located a really nice quad of 6B4G's in Heintz and Kaufman, LTD boxes where the tubes are labeled "Made in England" and are unfortunately appear to be of Russian origin.

Any idea if this is an "original" counterfeit (e.g., Arcturus, National, ITT etc where relabeled tubes were very common) or a modern effort? Any idea where the original H-K company was located, or when they actually produced (or marketed) tubes?

You can take a peek at the box and tube at:
http://www.the-planet.org/hk1.jpg

Thanks!

- Gary

Although the film was dated 1943, the film of the models
of B-17 of which you speak would have been taken before Pearl Harbor.
It's possible this might also have been a B-18 or B-19.

The early models of B-17 (type 299 to B-17-D) were outfitted with
a number of radio installations on a "prototyping" basis,
and as equipment was available. The Signal Corps of the period
of these aircraft (pre-1942) had a hard time getting equipment
at all, and many "strange" installations took place.
The B-17-E marked the beginning of volume production.
It would have been equipped with the familiar
SCR-274/SCR-287/SCR-269. Systems added later would
include SCR-522 to talk to escort fighters and various
IFF, Radar, and navigation systems.

I have for sale as a package only:
T-4XC: Ser# 22074, manual and "marked" inter connecting cables. Chassis shows slight corrosion and minor scuffs on case, face looks good. Two extra Xtals for crystal control are included, but I'd have to pull case to give details.
MS-4: Face in good condition, case ok, has been touched up in spots, has a couple scratches and a dent on the bottom rear (not noticeable from front or side view)
AC-4: Ser#53368 in good working condition.

Asking $325.00 plus shipping 3 separate boxes) or
meet you around the Dallas area

73, Jim
K5RST

>It's possible this might also have been a B-18 or B-19.

I doubt the XB-19 even made it into a film, but if it did, I'd love to see it. As I recall, there were two versions of the XB-19, different engines being the primary difference. It may have been the same aircraft re-engined, or just two different aircraft. I don't think more than two were ever made.

The B-18 was a twin engined bomber, obviously easily distinguishable from any B-17.

For all you BA folks that build model aircraft, someone just came out (within the past year or so) with injection molded B-17B, C, and D models in 1/72 scale.. I believe it's Hasigawa.

Heintz and Kaufman made transmitting and industrial tubes at least as far back as WW2. They were located in Los Gatos, CA, IIRC.

>B17's were early types with the odd-shaped tail-fins (i.e. not having
>the usual long dorsal strake).

"Air Force" was directed by Howard Hughes. I suppose he would have wanted to be authentic, and use genuine airplane interiors in his movies. But many such "interiors" were mocked up on the Hollywood studio lots, and National components were likely to be stored in the "radio" section of most any studio warehouse for movie props. If you've seen those same HRO components in any other movies, they were likely studio props.

In 1943, the same year Hughes directed "Air Force," he also directed Jane Russell in her famous cleavage revealer, "The Outlaw." So Hughes was actively directing around that time, while building the Spruce Goose in odd moments.

Your best tip as to whether what you saw was authentic would be whether or not it looked like documentary footage, rather grainy and real looking, with a lot of shakiness and vibration, or whether it was beautifully lit, very stable, and very Hollywood-ish looking.

The only other thing I would say, an HRO would have taken up a hell of a lot more room in a cramped airplane cockpit than ARC-style components. And ARC components were designed from the beginning to take the vibration of airplane use -- whereas National components were more or less designed for desktop use. I suspect those National boatanchors were too damned heavy to put in airplanes, but I could be wrong...

I'm gonna buy 5 each of everything I want for less than one of
each costs now. I'll keep one set going from the other hanger
queens. Man, I sure hope you're right about the bottom falling
out. Meanwhile, the average 30L1 at hamfests around the
Southeast goes for about 500 to 600 dollars in very good
condition.

Rod, I can't help you with your problem--but if somebody else can, and a possible culprit is the power transformer or the press-to-test switch, I have them. I took them out of my Mercury 204 when I junked it a few months ago (the thing looked like an apprentice metalworker had practiced on it). I'd sell them both to you for $10 plus shipping.

Good luck!

Avery W3AVE

There may well be "at least 3 seperate G8ASO's posting out there", however there can only be one person with the callsign G8ASO and if you are not the person who it is allocated to (and this is what he is saying) then you have no right to attribute your comments to his callsign...

1864. B17 Radio Installations

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-29 00:00:00 UTC
From: Joe McElvenney <joemac@xic.demon.co.uk>
Message-ID: <VA.00000095.0528ab41@joe-mcelvenney>
Source record: 72078

Hi,

Did National provide radio installations for B17's, as a movie I
just watched used radios with their distinctive HRO-style components
fitted? This film was "Air Force", a 1943 morale booster, wherein the
B17's were early types with the odd-shaped tail-fins (i.e. not having
the usual long dorsal strake).

I always thought that the BC375E/BC348/Command Set/MN-26 combo was
standard for this aircraft. Could this just be film-maker's license or
was the equipment portrayed correct for its period?

Hi
NO MODS, please! Keep it original. Drill no holes.
If the original parts all work then use them. If caps need to be replaced,
use made in U.S. parts if you can. Sprague, Mallory, Cornnell Dublier,
etc., but Jap parts are okay if needed.
Thats my two pennies worth.

1869. FS:1917 Kennedy shortwave receiver -Exc condition

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-29 00:00:00 UTC
From: manytrails@aol.com
Message-ID: <20000129085653.25796.00000252@ng-fn1.aol.com>
Source record: 72083

This is a beautiful example of one of the first commercially produced shortwave receivers. In remarkably good condition considering its age. I would put this piece at a 9 to 9.5 on the cosmetic scale. And the electrical condition is also excellent. All original, with brass tuning knobs, solid rosewood case, and original finish. Its circa 1917 and the brass plate on the inside of the top cover shows a patent date of 1914. This is a rare and beautiful example of the state of the art for its day. I have included a photo of it at this address:

http://members.aol.com/manytrails/pictures/kennedy1.jpg

$500 puts this beauty into your collection. I will pay shipping and insurance to your location (USA buyers only). Thanks.....Bill

Here is the finest example of an early Kennedy shortwave receiver that I have ever seen. Its a model 281. Beautiful rosewood case, with black front, brass tuning knobs and skirts. The signature plate under the top cover shows a patent date of 1914. This particular receiver is circa 1917. All original, with beautiful cosmetics and all original circuitry. Here is a true collectors or museum piece ready to display. Email if interested. $500 brings this gorgeous piece of radio history to your door (shipping included - USA only please).

Check it out with this photo:

It's usually considered good ettiquette/taste to label EBay related
posts with:

FA

Such as FA- HX-50...

If most travelers here were really interested in EBay stuff, we
wouldn't need pointers such as yours...

I like LMs and the 221s, seldom can bring myself to pass one up. It seems like here in SoCal nobody wants them so they go for cheap. Really never have paid more than $15-$20 at a swap and that is way high. We have 4 Ham/electronics swaps within driving distance, one each weekend through the month starting with Santee/San Diego then Fontana, Pomona, and TRW. People just don't buy the series so in any condition they can be as low as $5. Right now I have one, LM-10, that was a $10 "If you don't want it it goes in the dumpster" set that works with an RAK/RAL-TCS set up just fine...even had a tech manual cables and pwr supply. Ray Mote sold me an LM-21 for $25 NIB from Navy depot overhaul that is still in the box, a very neat thing. Maybe F counters made hetrodyne F meters obsolete but an LM/221, noise bridge, and Millen GDO are great toys and just too neat to pass up.

Greetings,

I'm wondering if anyone's got any experience with this transmitter or knows of any mods. I'm having a tough time with parasitics of some kind on 15 meters. I also can't get grid current up to the 2 mA as instructed in the manual.

Thanks in advance for your thoughts.

Heintz & Kaufman had their start in 1927 as a builder of very high quality radio apparatus which was built to custom order for industrial clients. They made the aircraft transmitters for the 1928 Byrd polar expedition. They started making their "Gammatron" series of transmitting and industrial tubes sometime in the 1930's, but I am not sure of the exact Year. I have been doing research into this company for a couple of years now, and information has been difficult to come up with. Tubes have surfaced of types (such as 12AT7) that are post-WW II, but I am not sure that the original company existed that recently. I am told that Eimac was a spin-off of H&K, but don't know for sure. I am also not sure exactly when this brand went out of existence, but suspect sometime in the late 1940's or early 50's. What makes you suspect that your tubes are Russian ? I doubt this very much. The photo that you posted resembles tubes made by Genelex, an English manufacturer. It is unlikely that any Russian tubes were made for any Western countries during the post-WW II era owing to the politics of that time. If these are a matched (date code)Quad, and are made by Genelex , or Mullard (less likely, but possible) then, you made a good find. If you turn up any additional info on H&K, I would appreciate your forwarding it to me. Thanks
Chuck Ochs N1LNH

Well given that the majority of newsgroups that you have posted to (using another persons amateur radio callsign) have been amateur radio orientated sites I think that it is very relevant. There is of course no requirement for people to use their ham radio callsigns (if they have them) on the net, but this still does not change the fact that you are in effect saying that you are that person - i.e. G8ASO. He is saying that he is not happy with you masquerading under his callsign. As most people would see his callsign as being the sender of that post they would think that it was him who had written it and was supporting your site. Stop being silly, change your posting ID and stop trying to pretend that you are him. Hmmm if I were G8ASO then I guess that I might be flattered, after all they say that imitation is the sincerest form of flattery - or words to that effect.

Matt

Please take this obviously fascinating but to some of us rather
esoteric debate out of uk.media.radio.archers - we are radio amateurs
in only a virtually obsolete sense of the term.

Follow-ups set.

1917 Kennedy model 281 shortwave receiver. In excellent condition with original headphones. This is a beautiful example of the state of the art shortwave radio from that period. In cosmetically beautiful and electrically excellent condition. Gorgeous rosewood case, all original knobs with brass tuning skirts. I would put this machine in the 9 to 9.5 category. Original tubes, circuitry. For a Machine this old its really spectacular. Email if interested. Asking $500 for this rare and beautiful piece of radio history, shipping included to U.S. locations. Check out this photo:

Perhaps by posting your whingeing irrelevance to so many newsgroups, you
are a pot calling the kettle black?

Just a few hours left on loaded Drake R-4C with MS-4 speaker. This receiver has all options including the rare noise blanker and AM filter. It also has all CW and SSB filters. See at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=244504491

My other auction has the T-4XC and power supply. It is also a late serial number unit and is in nice shape. See at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=244567987

Thanks for reading.

1928. crystal trade

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-30 00:00:00 UTC
From: Steve Fried <k2pts@home.com>
Message-ID: <3894972F.D907C1AF@home.com>
Source record: 71978

Hi

I have a James Knight crystal (Sandwich, IL, U.S. A.) in a FT243
holder for the 80 meter novice band, 3723 kcs.

I would like to trade this for a crystal FT243 holder in either the 80
or 40 meter band lower in frequency. So an eighty meter crystal
between 3500 and 3550 is good. Or 40 meters around 7.0 to 7050 kcs.

Also I have a few crystals for 40 meters around 7100 and up I would like
to trade for lower 40 meter crystals.

If you have crystals around 6.8 or 6.9 mhz that's okay, cause I can
grind them up.

Regards,

Steve
k2pts

1929. FS: Knobs for Ranger I

Newsgroup: rec.radio.amateur.boatanchors

Anybody need two Ranger knobs?

One is the size and shape of the bandswitch knob--no pointer, white indicator or other indicator. The other is one of the smaller knobs with calibrated aluminum skirt. Both in VG condition.

$5 for both plus $3.20 priority shipping.

73, Avery W3AVE

I've been trying to use a program "BeaconSee" with my Kenwood 850, but apparently it doesn't have the correct command sequences to tune the rig under control of the PC.

To make a long story short, does anyone out there have the list of Kenwood control commands that may be sent from the PC to the rig (via the RS232 interface)? I can't seem to find it in any of my Kenwood manuals.

Any/all help is greatly appreciated.

I had the same problem.......It was a broken wire on the VFO select switch. Be careful though, the wires break easily. Both VFOs worked separately, but didn't offset +and-. It is a terrible radio to work on. The microproccesor has a couple of designs....I found a bad solder connection their once too. Oh ya, the radio stops tuning with the cover off upside down in bright light because it is too bright for the photo chopper in the tuning circuit. Jack k8xx

A callsign is assigned to a station and not a person, if amateur radio station G8ASO was established, then anyone using it must give the same call-sign irrespective of whether they have a call-sign of their "own".

As this is conducted over telephone lines, amateur radio call-signs are irrelevant! This is not an amateur radio station!

G8ASO

1981. FS/T Heavy duty Antenna Tuner/Parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-01-31 00:00:00 UTC
From: Tim Cook <timcook@erinet.com>
Message-ID: <38962f64$0$2951@news.voyager.net>
Source record: 71933

I bought a HB tuner for the parts, but before I got around to doing much with it, I bought a Wanzer Z-Match so I don't need it. It consists of the following parts (I have it temporarily wired as a "T" match.

1. Bud Model 1556 Dual section 250 MF, .015" airgap, (one of the ceramic end sections was cracked and epoxyed, doesn't affect operation)
2. Bud Model 1529 Single Section (Not sure of the capacity, but it is half again as large as one of the 250 mf sections,) .015" airgap
3. Multitronics Model 229-203-1 28 uH Roller inductor, good condition. not over heated
4. Turns counter, don't know the manufacturer. it measures 2"x4", had a 3" spinner knob and works smooth
5. Globar type CX 50 ohm resistor with holder, tuner input switched to this as dummy load or to ant, measures 1" dia, 8" long, heavy duty!
6. what looks to be a 4:1 balum on a 2 /12 " x 1/2" single torroid, not connected at this time
7. Cabinet, measures 12" W x 6" Hx 9" D, it was a tuner at one time I think, the cabinet is completely preforated with very small holes, 1/32" or smaller, The front and back are solid, with 50ohm input and 50 ohm output printed by 2 SO-239's there is also 2 sets of wire connectors (not connected) on a plate on the chassis labeled LF - OUTPUT - HF. The turns counter is mounted on a piece of plexiglass for stability. The chassis has a label on it that says ...."this apparatus uses inventions of the USA and Canada. Patents owwned by the M.C. Jones Company of Bristol CT...."

These components would make a good HB tuner, or use it as is....

I would like to sell this for the best offer or trade for a qrp rig, or a 2m mobile (with ext receive), or an older tube type shortwave receiver, or ???

please email direct.

Thanks
Tim

Source record: 71940

Hi Gang,

The estate auctions are still going on. Just sent a money order for $320 to the estate and would like to keep sending more. QST, 73, Ham Radio and others from the 70's, 60's, 50's and earlier. Also books from as far back as 1918 for you collectors. See them all at:

http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=radio_randy

Thanks for looking!

Radio Randy

1989. RCA ET4336 Recovery - Story and Pics

Newsgroup: rec.radio.amateur.boatanchors

From: Martin Swift <martin.swift@virgin.net>
Message-ID: <3894D0F4.D39775C9@virgin.net>
Source record: 71941

Hi,

I have posted a few pics of (mainly) vintage British military radios on my web site, plus an account of the recovery of a WWII RCA ET4336 Tx from a local underground Cold War bunker here in the West Midlands.

http://vzone.virgin.net/martin.swift/Mil_Wireless.html

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

Hi Jim, Unless I'm mistaken what you are looking for is
contained in a rather comprehensive manual for the Type 12
ARC radio equipment. The R-11 is a receiver rather than a
transceiver. If my memory serves me is covers 190 to 550
KC or KHz; it is essentially the "q-fiver" with loctal
tubes. I have the manual, and would be happy to help you.
Tell me a little about what you are trying to do. Convert-
ing the unit is one thing; restoring it for aircraft use is
another. 73, Ross N0ZA

1997. Re: FS or trade: 500 kHz MCW marine band transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-01 00:00:00 UTC
From: Jeffrey Herman <jeffreyh@hawaii.edu>
Message-ID: <Pine.GSO.4.10.10002011818450.12163-100000@uhunix5>
Source record: 71799

On Tue, 1 Feb 2000, OCEANRADIO wrote:
> Jeff: What would anyone use this transmitter for?

Former shipboard operators who are nostalgic for the old 600 meter maritime band might enjoy having such a radio on their shelf.

500 kc was the very first designated distress frequency. It was made official at the 1912 London Radio Conference. For over 80 years it served the maritime community as a calling and distress channel. Every shore station and underway ship kept a receiver tuned to that frequency not only to hear distress calls, but also to copy navigation and weather warnings, and calls to that station or ship -- the frequency was similar to a worldwide partyline.

Even early broadcast stations were required to listen to that channel.

With the above as a preamble, here's the ad again:

For sale or trade:

"ITT Mackey Marine Reserve Transmitter Type 2017A
405-535 kHz, 40W output, A2 emission"

Almost new condition except for some scratches on the top of the chassis (probably from rack mounting).

Crystal-controlled with the following frequencies:
425, 454, 468, 480, 500 kHz (all in A2!)

Front panel: Antenna tuning controls (course and fine), 0-5 amp antenna current meter, channel selector.

This transmitter is solid state.

Asking $395 plus shipping from Minden NV 89423 (shipping should be around $30 via USPS), or trade for a rotating light beacon to be used in a lighthouse restoration project. Something a bit smaller than an airport beacon would be fine.

Message-ID: <8757v4$1nge$1@dolf.netfront.net>
Source record: 71844
Cross-posted to: alabama.birmingham.radio.amateur,aus.radio.amateur.misc,es.rec.radio.amateur,nl.radio.amateur,rec.radio.amateur.boatanchors,rec.radio.amateur.misc,rec.radio.amateur.policy,tnn.radio.amateur,uk.media.radio.archers,uk.radio.amateur

A callsign is assigned to a station and NOT a person, if amateur radio station G8ASO was established, then anyone using it must give the same call-sign irrespective of whether they have a call-sign of their "own" or not. Many people seem to forget this licence requirement, how often have you heard "I have G1XYU here with me"
Bollocks!
G1XYU is NOT there!, and if that call-sign were to be used the original station would have to close - log book entries filled in, and then a contact re-established as the station is identified by the new call-sign. If the original operator was then to speak, he would be legally required to identify himself [his station] as G1XYU, not G8ASO, until such time as G1XYU closed down. Actually, it would be G1XYU/M as this would not be established at the main station address for the G1XYU license.

Easy if you read the BR68!

As this news-group lark is conducted over telephone lines, amateur radio call-signs are irrelevant! This is not an amateur radio station! This is not amateur radio, and G8ASO said that, stroke M, of course!

70 Trees G8ASO
none of this detracts from the web site though

have one of those BC-779/SP210 beasts with full docs, will send to
BAMA later, it is several pages of circuit diagrams and drawings!!! I
was thinking of using 6K8 or ECH35 as BFO and product detector and
leave the rest as original

scanned and posted tonite an info page for Heathkit HG-10, circuit
diagram and
7 pages of text from the handbook of SB-620 Scanalyzer to Ken K4XL
grimm@lynchburg.net for the BAMA site http://bama.sbc.edu ,
also posted circuit and info for Heath QM-1.

If you have some circuit diagrams, please check whether they are
presented on this site, or send email to Kenneth to
help him make a good site

Use 300 pixtels for circuits and 150 pixtels for text, for
B/W usually "Line Art" and gif file is optimum for smallest file size,
but for photos it is sometimes neccessary to use grey-scale and save
as jpg file

Kenwood used to supply the command set with the chip set, not the rig itself. I can't help you as my files stopped with the TS-940 and R-5000. The basic command set hasn't changed, but each model added or subtracted data strings to the basic set. Have you asked Kenwood for the datasheet?

Hi There,

I need 2 parts to complete my RU-18 receiver.
It is the early aircraft receiver that was eventually replaced
by the ARC-5 command sets used in WW2.

The parts I need are the DYNAMOTOR FILTER UNIT type CW-21215A
(sitting on a little box) and the JUNCTION BOX type CW-62007A.
The first 2 letters are not important.

I have the other parts (except for a few coil boxes and connectors).
Please let me know if you have these surplus to your requirments.

Regards

Most likely a homebrewed transmitter, factory built transmitters of this
era were very expensive so most hams rolled their own. All the
radio magazines of the time had numerous articles about the latest
transmitter circuit and how to built it. I have a homebrewed transmitter
in my collection that was built from an article in a 1929 QST.

> K4XC

I saw what appeared to be an old Tektronix scope in an alley last spring.
I didn't approach it to see what model. It seemed a shame to leave it
there, I sure hope someone else found it, but I was on foot and there
was no way I was going to try to get it home. Expecially since I already
have a 545 that someone found in the garbage (complete with some plugins
and manuals) and gave to me.

The first scope I ever had, I bought for five or ten dollars at a radio
club auction when I was twelve or thirteen. I think it was a lesser
known brand, and of course it it was AC coupled and good only for slightly
better
than audio, and naturally no triggered scope. But it was a real scope,
and it was useful for a while. I do recall the case was a considerable
portion of the weight. A few years later, having graduated to a loaned
Tek 310, or was it a 315?, I gave it to a friend, who proceeded to take
it home on the bus. I have no idea what happened to it after that.

Subject: A Theory - STOP THE BAIT AND SWITCH SCHEME!

Friends, Romans, Countrymen,

LEND ME YOUR FISTS!

My friends N8WGM and N4SKD may have solved the mystery of the sudden restructuring to become effective on April 15th. It may not be only about Kenwood or Icom wanting to sell Ham rigs in CB-boom quantities. Big business wants frequencies and the Feds want to sell our God-given Spectrum for filthy lucre and as a bonus to keep the people from having direct access without a government or corporate gatekeeper.

As the new theory goes, the FCC only has unilateral control (eminent domain) over domestic spectrum, namely the VHF/UHF bands, while the HF bands are ruled by international treaties. The quickest bucks come from selling VHF/UHF. These frequencies are also the most useful for business mobile communications. The fly in the ointment for the greedy bureaucrats is the occupation of many of the available bands by large numbers of Technician and Novice Hams. These no-code or little-code Hams are a majority. The ever resourceful parasites in high places were presented with a serious problem, how to move them off the VHF/UHF bands without starting an insurrection. The answer, GIVE THEM INSTANT ACCESS TO HF so that when the plug is pulled on ever increasing slices of VHF/UHF they won't have as much reason to gripe. This is the oldest trick in the book, like giving displaced employees of companies moving offshore the "option" to move to a different division or shuffling Native Americans to smaller and smaller reservations with promises of better hunting grounds.

Who fought to maintain the portions of the VHF/UHF bands already ceded to big brother and big business? Were the General, Advanced and Extra-class Hams as dedicated to saving the 220 MHz band as the Techs? The non-HF Hams fought gallantly but in vain. Most HF Hams didn't seem to care very much. That lesson didn't go over the heads of our "friends " in government or the ARRL. Those cynics know that while the novelty of HF has most new full-spectrum Hams diverted, the VHF and UHF portions will be fair game. The Feds will pull it off like a Mommy offering a baby a lollipop to distract him while she takes away a shiny but oh so dangerous razor blade. Didn't you know that we

are all supposed to be too irresponsible to "play" with our own spectrum?

The no-code Hams are crowing today, but they may come to see their victory as
hollow. We will be all crowded like sardines onto the "reservation" of HF while some of the most valuable VHF/UHF turf is lost forever. SUCKERS! Had these no-coders simply done the work to achieve proficiency in code speed they could have had their cake and eaten it too! Now they will loose what they had and foul what they gain.

Let us all join together for one last thrust against this dirty scheme. Attached is a communication from a friend and avid CW operator. He has provided links to a site with a downloadable petition and links to interested
officials. We have until the middle of February to register our opposition to the restructuring. WRITE AND SHOUT FOR YOUR RADIO LIVES!

From: "David M. Brodbeck" <dmbrodbe@mtu.edu>
Message-ID: <877c0cafp4@campus3.mtu.edu>
Source record: 71878

I just don't buy the scenario presented in the beginning of this thead. Even among people who use the HF bands, 2m and 70cm are mainstays of local communcations and PacketCluster networks. Additionally, we have an investment in several satellites that uplink and downlink on these bands, giving a major incentive for us to want to keep them.

I don't know what things are like where you live, but there are *far* more people of every license class active on 2m than there are on the HF bands, around here. I know at least 10 people with 2m rigs, often more than one (mobile and HT). I know maybe three who have HF setups of their own.

2040. Attn: Pittsburgh PA area folks

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-01 00:00:00 UTC
From: Lou <tech@dp.net>
Message-ID: <877edegbu1@news.dp.net>
Source record: 71882

Hi and thanks for reading,

This message is primarily targeted for the folks in the Pittsburgh PA area, as some of the items are large that are being offered and the gentleman doesn't want to ship. However, if you live outside the area and may be willing to drive a bit or are coming through or what have you, then you are welcome to read on.

I have a friend of mine interested in selling a Collins R388, some adaptors, manuals and some other assorted miscellaneous items (not all collins). He is really looking to clean out the shack. He is getting up in years and wants to get some cash out of the stuff, while "he" can use it. He also has some of what "may" be older military radio type manuals that some of you buffs are looking for. I don't know what all he does have, but he certainly has a room full. Some of it is military in nature, and some OTC commercial. Most of it is older, possibly collector type stuff (Tube/Hybrid). If you fit in this catagory and may be looking for something you've not been able to find or you think strange, don't lose out on contacting this gentleman, he "may" have it.

If you think you may have an interest, e-mail me for his phone number and/or e-mail address and I'll get it to you. I'm posting this because he is rather new to the internet and isn't used to using the internet to it's advantage, but he "can" do e-mail.

Thanks again, for reading....

Lou/Tech@DP.NET

FORSALE - A pair of Eimac 3-500Z power tubes.

I have a pair of 3-500Zs (genuine Eimac) that I would like to sell. I believe that they are pulls but are in excellent shape (one might be brand new, but I won't swear to it). $180 for the pair.

True, but I think that the bands of choice for commercial interests
would be 420-440, 900, 1.2 ghz and everything else above, maybe even the
remainder of 220. All of these bands are so underutilized its reasonable
to believe this "conspiracy theory".

2049. Re: Interesting reading or bye bye vhf/uhf

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-01 00:00:00 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <877sb7$7fe$1@nntp3.atl.mindspring.net>
Source record: 71891

I tried in 1993 to get attention from the ham community on Compuserve's Hamnet forum
over an article by Robert L. Samuelson, entitled "The Silent Giveaway". It outlined the
FCC's spectrum auction plans for over 200 MHz of spectrum; some in use by ham radio.
I was ridiculed by the elders of the tribe for not being smart enough to quote verifiable
facts due to the lack of a callsign (I was in the 3 month waiting period between passing
the first exam and receiving the first callsign). Further attempts after receiving said valid
callsign were negated because I sought gratification from other more conventional methods,
rather than binary oscillations of a momentary contact spst switch. Silly me.......Common sense
has no value where tradition rules supreme.

The spectrum selloff had a few embarrassing moments, when some of the 800 MHz spectrum
failed to bring the Big Bucks, so Congress added verbiage to require the FCC to finalize
spectrum auctions only in cases where the"reserve price" had been met - Shades of eBay...

The permission for the spectrum auction is valid through 2002, if my memory serves me correctly.
These conspiracy rumors are committed to paper in the congressional record, ARRL publications,
the ITU and other less obscure sources.

I am sure that I will get the same guff today that I got 7 years ago, but that won't stop the ongoing
"refarming" of profitable spectrum. I know I will get the last laugh, but somehow I think it will be
a rather hollow victory.

Throughout history, the good American people have fallen prey to a plan that bases itself on
the Hegalian Principle... Thesis, Synthesis, Antithesis. It is usually used to force a loss of
freedom or liberty in exchange for a tidbit of perceived security. The scam usually goes like
this:

Thesis: You got something I want.
Synthesis: I will make you believe that what your possession is bad.
(Bruised Self-esteem)
Antithesis: You can't wait to get rid of it for the sake of humanity.
(Self-Esteem Restored)

We were warned of this scheme at the time of the signing of the Declaration
of Independence by
our forefathers. We are the only nation that I know of that have the
education potential possible to
make everyone able to be smart enough to ignore what is in front of their
face, as long as it doesn't
affect their "Comfort Zone", which offers their greatest stability and is
used almost exclusively
for sitting on..... We are also the only nation that I am aware of the
devotes 99% of it's resources
to making criminals out of 100% of it's population. Figure that one
out......

Let the Flames Begin,

David Little

2055. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8782lo$8fe$1@news.hawaii.edu>
Source record: 71807
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6O

> First Collins commercial ham transmitter.
> WA5UEK Brian Harris has one.
>

I know these and some other commercial transmitters were made
during that time. But how many "average" hams during the depression
owned a factory built transmitter? Not very many I'll bet, that's why
they're so rare today.

I own a factory built transmitter made by Clough-Brengle Co.
in 1934, I've never seen or heard of another one existing.

The AWA museum was recently given a "remanufactured"
Gross transmitter that was originally made in 1934.
If I remember right it is the only 30's era "factory"
built transmitter in their collection.

Like I said before, I believe most (99.9%) hams in the 30's built their
own transmitters. Factory built transmitters didn't really get common
until the 1950's and later.

73,

Ron

I am restoring a 1934 Harvey that is generally of the era. You can see
it at http://pages.cthome.net/nord/Harvey.htm
But most hams then built their own transmitters.

Moores book or QST's from then will give you an idea of what was
available but you willl quickly note how few commercial rigs there
were then.

How do you like the rcvr ? That is one I want to ad to my collection
someday.

73 and good luck.

It is an ARC RT-11A, 118-136Mhz, 360Chan. It has a DV-15A power supply and C-67A Dzus mounted control head. I know what the R-11 is and the RT-11A seems to be a somewhat later product, although not later enough not to require those silly ARC connectors.

I'm trying to get it wired and operating just as a display of early ARC commercial air equipment.

Thanks.

Jim Burnham

2074. Value of Tektronix 545A scope?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-02 00:00:00 UTC
From: Will White <kd7bfx@mindspring.com>
Message-ID: <389811BF.8A9F8758@mindspring.com>
Source record: 71826

I picked up a TEK RM45A scope w/ Type "CA" plug-in (the rackmount version of the 545A: 33 MHz dual-trace, delayed sweep, ext. trigger, "letter" plug-ins) at a surplus outlet recently for $45, and just wondered what it is worth. It seems to be working FB. I get good, bright traces on boths channels, no burns etc. to the CRT, and readings are close to dead on, though when I find a manual I will calibrate it. It looks great too, and has a rolling cart with slots for three plug-ins and a switch to choose among them (it came out of a storage room in a university lab where it had been living wrapped in plastic sheeting since 1985). I have seen the 545A in this condition in the Surplus Sales of NE catalog for $175, and elsewhere for $200-225, but never the RM45A. While I plan on keeping and using it, I just wanted to know exactly *how* good a deal I got (can't go wrong getting a fully working 33MHz TEK unit for $45, I think!). The only "beef" I have is that this thing is so hard to shlep around: it weighs well over 50 lbs., and it's the size of a *large* commercial microwave oven. Any guesses as to current market value?

de Will KD7BFX

p.s. where should I look for manuals, accesories (like plug-ins), and decent, inexpensive >30 MHz probes?

What is irrelevant is your drivel. You do not appear to hold the callsign G8ASO - as such stop attributing your site to the holder of this callsign - as he obviously is unhappy with both your site and also you attributing your site to him.

That's what was called the type 210 VHF Comm set. Originally with a
dynamotor, and later with the "dynaverter". I'm sure I've got a manual, and
perhaps connectors.

As one of these Dirty Nasty soon-to-be "Welfare Extras", I can tell you
that, no, I won't be selling ANY of my VHF/UHF gear (do any of you guys use
20M to talk to your local ham buddies across town?), and I have already
started BUILDING some HF gear.

WB5MYY
A <PROUD> Technician Plus licensee

BTW - This comment is not directed to, or against, any given person. I have
just gotten really tired of hearing that anybody with a ticket less than a
General is a CBer idiot who wants to get on HF "for nothing". I am an EE and
have my own business designing control systems for machine tools. Some of
the sharpest guys in our local ham scene are Ts and TPs.

Why don't we all just try to enjoy the hobby doing whatever we like to do, building equipment and experimenting (me), CW (some of you guys), whatever, and stop bickering amongst ourselves. It makes us all sound like a bunch of silly children.

I sincerely believe that if we all don't get along and build up the ranks as a united, service oriented brotherhood, there won't BE any ham radio in 10-20 years; the mega-corporations will pressure the FCC into giving them our freqs for their commercial gain while we are all bitching back and forth about who is a "real" ham. The only way we can prevent that is to show the FCC and the populace at large that our hobby adds value to the society, especially in times of unusual need or disaster, serves as a gateway into high tech occupations for the youth of the country, and that we are not just a bunch of self-centered dorks with high priced toys that use a public resource (spectrum) and then give nothing back.

Mike

I installed a NOS set of NEC (original tubes used) in a Yaesu 101-F.
The tubes had a one second arc which blew the fuse.....
Put in new fuse, turned on power, this time filaments lit up no arc..
After about two to three full minutes tubes started to get hot (glow
cherry red)... went thru this cycle 5 or 6 times and now the tubes
stay cool for about ten minutes before overheating..... I put the old tubes
back in and they still work (the usual 50 watt output)....
don't have a tube tester but I found no opens or shorts in the
tubes with a meter.... Any suggestions, other than cry because I
spent so much for a bad set of tubes....
Thanks ,Jim Stone

In article <Xu3m4.187$Hv5.16411@bgtnsc05-news.ops.worldnet.att.net>,
f.krupalla@worldnet.att.net says...

>would anyone have any suggestions regarding re-painting an sx-100 front
>panel or does anyone have a original front panel from a parts-radio.
>thanks,

Virtually impossible. I highly doubt that you'll ever get results that
you will be happy with, and you'll totally destroy any resale value that
the radio has. Mabye you could repaint the silver upper half of the
front panel (assuming that you could replace the lettering as well), but
that pattern on the front of the lower half of the case seems impossible
to duplicate at home...

I ended up buying a second, semi-working, SX-71 to use as a parts carcass
for my good one. The one thing that I needed the most was an original
power transfermer, which had apparently burned up in my good one (there's
some brown discolouration on the chassis in the vicinity). The "good" one
also had a drifting problem that I corrected by swapping out the 2nd
converter transformer from the "carcass" as well. I also got dial glass
replacements, and was able to put together a complete set of original knobs
in the deal. I picked it up at Dayton several years ago for around $75.00,
so overall it was worth it, I think.

I think that your best bet would be to try and find a "parts" unit, if
you can. Good luck...

C.K.

Hi all,
I took my old 32V3 out of storage today and discovered that some unknown liquid (probably just water) splashed art of the front of the tranmitter leaving a slight chalky residue. I can't tell if the finish is permanently stained or not, but a little windex has no effect. I'm reluctant to try anything stronger without some advice as the rig is otherwise in great shape. Anyone have any tips on cleaning this type of finish? Thanks

Phil

phil, try armorall the stuff to clean tire wall it does marvel. when you clean your 32-v-3 it is nice when it is still wet but stain reappears when it is completely dry. with "armorall" it will stay clean and shiny. i used it many years ago with the kws-1/75a4 and it is still nice today. luc ve2lgj 73s

> Thanks!

Steve,

Transformer life will be shortened by three things: Moisture, moisture, moisture. Storing a transformer while keeping it energized should keep enough temperature rise to keep the moisture out. The enamel coating on the windings in older transformers always has slight cracks. Moisture getting into these cracks will cause more damage and failure. Adding a resistor across the secondary will cause more of a temperature rise. It doesn't need to be much, a few watts of load should do it. Another way to keep temperature on a transformer in storage is to short the secondary and apply a low voltage to the primary. Enough voltage to induce about 10 rated secondary current should be enough. This might only be a couple of volts dependent on the transformer's design impedance.

This is a way to determine impedance. Short the secondary and apply enough voltage to the primary to induce nameplate current in the secondary. The percentage impedance will be the value of applied voltage devided by nameplate voltage.

Later wire insulation, Formex, Formvar, etc., is much less likely to have these tiny cracks, but will still benefit from being kept warmer than the ambient. Also vulnerable is the core iron. It can rust and expand with moisture getting in between the laminations. Even epoxy encapsulation is not proof against moisture.

A good situation is an liquid filled transformer. I've used small utility transformers in the past.

Generally speaking, most transformers were and are designed to continuously withstand a temperature rise of 40 deg. centigrade. If you can touch the case or iron but would not want to keep your hand on it,

it is close to this temperature. At 70 deg. F ambient, this is 174 deg. F.

This pretty warm.

Component failure such as capacitors and rectifiers should not damage a transformer since the duration of the fault should be short provided proper protection is provided.

Minor overvoltage of the primary (such as 125 instead of 115) is inconsequential unless the transformer design is so poor that the core saturates and the current goes quite high or the load on the secondary is so close to nameplate rating that the temperature goes much above the rated temp rise. Some later insulating materials are rated to withstand a 100 deg. C rise. You do the math.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

Phil,

The "Armorall" advice may be correct, but I think I'd try a very small
amount of it in another tiny area of the receiver first, someplace near
the bottom on one side, for example. Then, clean the area gently with
an old soft toothbrush and a little water. Wait a day or so just to see
that there is no damage in this "less visible" area. If there is, it
can be easily touched up.

2121. Surplus Houses - Where are they?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-03 00:00:00 UTC
From: shewinky@aol.com
Message-ID: <20000203172415.29829.00001307@ng-ck1.aol.com>
Source record: 71774

I'm familiar with Fair Radio, ESI in Cleveland, Midwest in Fairborn, OH, and of course, the grandaddy of them all...Mendelsons in Dayton. There's one in Indy - MAI Prime Parts. Where else are there electronic surplus houses that you can actually visit and dig through the junque? I've been told Skycraft in Orlando is fun but haven't been there yet. Anyone know of any others?

Ron is right on with his caution. Please, pulleease, don't use Armorall. You will *not* appreciate the "sticky-slick" feel of it afterwards, and if because of some horrible catastrophe you need to touch it up later, the only way to get the silicone off of it is with R12 or R22 Freon - note I will *not* give you any of mine... :-)

Get some Tannery (http://www.kandw.com/tanneryproducts/cleanerconditioner.html) from your local auto supply or KMart - it is absolutely the *only* thing I'll use on my WWII black wrinkle finish equipment, and I've tried 'em all! You can paint over it later on if need be, as well.

73,
Mike Hanz KC4TOS

2125. FS:HRO60Tw/Speaker

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-03 00:00:00 UTC

Message-ID: <Zsom4.84$B14.4088@nnrp2-w.snfc21.pbi.net>
Source record: 71778

For Sale: A beautiful HRO-60T with matching speaker and manual. This radio is in very good condition with an excellent front panel. Only a few scratches on the top edge of the cabinet. The radio is fully operational and includes 5 coils. This is a very heavy radio and would prefer to not ship because of possible damage.. Would like a pickup in the San Francisco Area or meet within 50 miles.
$650

Date: 2000-02-03 00:00:00 UTC
From: Mike Linger <gspubl@tca.net>
Message-ID: <s9kcit1edh132@corp.supernews.com>
Source record: 71782

I have decided to sell my Dynaco/Dyna stereo system and I don't know what the stuff is worth or what I should ask for it. I was hoping one of you might know or have some idea and maybe even tell me the best place to expose it. Each component is very nice and clean and athough it hasn't been on in a number of years it has been kept inside the house and free from any corrosion climate. It is a Dynaco FM-3, FM-5 (I have 2 tuners), PAT-4 Preamp, and a Dynaco Stereo Power Amplifier (kind of heavy). Any leads as to its worth and and where to sell it would be appreciated.....Thanks, Mike.

There's a bunch of "rec.audio" newsgroups where you can ask.

rec.audio.marketplace is very active for selling stereo gear.

rec.audio.tubes might be a good place, too.

rec.audio.high-end could be another good place.

Sure thing, Dave:

Thordarson 57C54

10 henries @ 110 mA DC
27 henries @ 0 mA DC
200 ohms DC resistance

I don't know the insulation value, but 1500 V would be a good guess.

What are you building?

Message-ID: <20000203213544.22407.00001452@ng-fh1.aol.com>
Source record: 71698

I have a Drake 2C that I am presently not using. I bought it with thoughts of using it since it is in pretty good shape. I like to mess around and repair old receivers as a hobby. I would rather do some trading for other receivers. I am interested in National, Gonset, Collins, etc....If you have none of those, then I would consider selling the 2C..

For Sale:

Exciting novelty item: HAND-CRANKED MAGNETO GENERATOR! Produces 120V
AC.
These will provide about 20-30 Watts depending on your cranking speed!
The size is
about 3" diameter and 3" deep with a retracting handle. You can mount
these behind a sturdy front panel with a single hole and the large nut
provided.
Several still available! Will sell for $25.00 each plus shipping

Pembleton's in Fy Wayne is also good..

There are a number on the west coast from San Francisco on down.. Takes over a week or two to do...

W.J. Ford Surplus in Smiths Falls, Ontario is great. Takes several hours to go through.

ARE Surplus in Findlay, Oh is good.

Surplus Trading Co. in Benton Harbor, MI is good

Grande Junquetion Ltd in Va. Beach, Va is good.

Glenwood Sales and Allied Action in Rochester, NY

Gemini Electronics in Longwood FL is good also...

Sounds like a pattern (all surplus is good!). There are several more (Debco in Cincinnati, etc), but too many to list...

Hi Dick,

: Really? Who is it that wants all your personal weapons made
: illegal?

: I see that you're still confused. About this, too

A morally and ideologically bankrupt Congress, regardless of the
controlling party, can ONLY take away what is ours already, as it
has nothing to give, and no real inclination but to serve itself.

This is, of course, why I like boatanchors.

I hope this information proves to be wrong, but I believe that A.R.E. in OH has been closed for a number of months.
I was in Pembletons last week and found it to be nice, but pricing was more "good, if I needed that specific item" but not priced - " for the junque box"!

Hope that is wrong about A.R.E. and wish Pembletons had an accessible branch near me!

It is my sad duty to report Herb Johnson - Founder of Swan Electronics passed away on Feburary 1st, 2000. He was 79.

For those that don't remember, Herb was the first to introduce an "affordable" SSB transciever to the average ham. A direct challenge to Collins "kilobuck" rich man's radio strangle hold on the ssb community.

Who can forget the Swan "Three drifty", 400, 500 and 700 series? They defined SSB during the 60's.

For the 6 meter man - the Swan 250 is still in top demand - even today.

Herb also introduced the "all in one station" which included Radio -and-AC/DC power supply all in one box. The famous Swan 270 is still considered a "nice" radio by many of it's owners and even today STILL can be bought for $150 or less.

A testiment to Herb's "Volkswagen" design approach to SSB.

Herb was also one of the first to come up with the "no tune" solid state SSB rigs although it was very expensive and not a great seller. Still, it paved the way for others to follow.

In addition to radios, Swan also made beams, mobile antennas and many accessories.

Herb made SSB affordable to many hams -

He will be missed....

I do not accept posts resulting from newsgroups, for which reason I do not publish my email details. However, there are usually a few childish cowards who delight in getting round that. (Cowards because they do not have the strength
of character to publish their remarks in the public forum where they belong.)

It is quite normal for childishness to come out of our universities, and here
is another example.....

One thing you did not mention was adjusting the neutralization. I have read that the capacitance of the NEC tubes is quite different than North American 6JS6's. There is even a mod file around for adding more capacitance to adjust for local tubes. I am not sure if that is really needed but it may have been done to your FT101.

The manual tells how to adjust neutralization, but it is not easy at all and a little scary poking around the HV. The ARRL handbook has a really slick method in it that uses an external signal generator and a seperate receiver. The rig is cold when you make the adjustment making it very safe.

Apply a 10m signal to the output of the amp. I just clipped right onto the common point of the two plates. Then connect a receiver tuned to the 10m signal onto the plate of the 12BY7 driver. Adjust everything except the neutralization for max and convient signal level. Then adjust the neutralization for a signal null. You are nuts on then for neutralization.

You should be able to get over 100 watts on 80m. 10m will be less.

Dave

I want to share with you all the an answer I have received from "A. B.
Bonds" <ab@vuse.vanderbilt.edu> via the hallicrafters@qth.net mailing
list:
"
1) That is how they were originally wired to ground. Honest. If you
want,
you can attach a pigtail to the cap and run it to a convenient grounded
terminal strip pin.
2) Those are the RF filters to keep power line RF out of the set. They
should
go from the power lines to chassis ground, something like 0.05 uf, 600
volt. They are mainly of use to keep high-powered local stations from
interfering with reception. Recommended replacement.

A. B. Bonds

From: tubecntral@aol.com
Message-ID: <20000203193120.27145.00001512@ng-co1.aol.com>
Source record: 71791

Hello, I'm tring to help a fella out making a pair of early Raytheon metal-banded base, 6SJ7 GT's. So far I have one NOS orig. box JAN GT, and one NOS orig. box 'Bantal' series Raytheons.

These I have here are solid-shield, but if you have mesh-shield, this too is acceptable, as he has one of these already.

If you have any that are NOS in the original box, or used but close to new appearance and performance, please drop me an email.

BTW, does anyone know anything about the history of 'Bantal' series Raytheon? This one has 'Bantal' in yellow letters in a yellow oval logo on the metal base of the tube. I have heard that these are an earlier, preferable series of Raytheon tube, but don't know for sure why or how.

The colorful 1940's logo's box has the 'Bantal' name on it, too.

Thanks in advance for any help you can provide.

Hi. I need to find the wiring diagram for the Swan 260 power connector.
It's only 5 pins, so no need for faxing, mailing, copying, or anything
like that.

pin 1= ?

pin 2= ?

pin 3= ?

pin 4=?

pin 5=?

I need to know how to wire the plug for 120VAC and for 12VDC.
Thanks. Jim W7LS

From: n3ab@fast.net
Message-ID: <389c8398.557737@news.fast.net>
Source record: 71647

I have 2 National NCX-3s laying here doing nothing. The first one was working, but hasn't been turned on for maybe 10 years. The front panel is good, but the cabinet was repainted in black. The dial slips. Overall condition is good, maybe a 7.5 or 8 out of 10.

The other is a parts unit, although it looks complete. The cabinet is dirty, but should clean up OK. It is in the original color. The dial works OK on this one. I never powered it up, as I picked this up at a yard sale.

I don't have a power supply or manual for these. Hopefully, someone who has spent time with these can put them to good use. I would like to get $100.00 for the pair, plus shipping from Pennsylvania. Please e-mail me if interested or you have questions. Thanks for reading.

Fellow Lovers of Vacuum,

I have a clean BC-312 receiver, the famous veteran of World War II, available for trade. My 312 is in good working condition and was converted to operate from 115V AC by a proficient technician from an earlier time. The receiver has all of its original knobs and is complete with the elbow connector on the front panel. A picture can be seen at:

http://www.bright.net/~tony/bc312.jpg

I am interested in collecting the National line of equipment, especially the HRO line, but will consider most pre-1955 National models. I am also looking for a clean SX-28 or SX-42, and will consider adding some cash depending upon the trade offered.

Send me a note if you're interested. Thanks!

73,

Tony W8HRO

Hi Guys;
For Sale, was part of an estate so condition was unknown at the time.
IFR model #A-7550 Spectrum Analyzer, S/N 4248, tags says Options 06 USA ,
106-266 VAC, 50-400 cycles.
There is the unit only with AC power cord, nothing else.
The unit does not light up at all, further inspection shows a power supply
problem in the PS Module which is replacable or repairable by the right tech.
The cabinet is fine but there is a lot of internal oxidation on internal Covers
and shields even though it was serviced in '97.
I am not a tech and have no experience with this stuff although I see them
being sold currently for $4995 by Test Gear houses.
I am asking B/O, please remember that I am also paying shipping and this thing
is heavy.
My misfortune may be your fortune so please consider a fair offer.
Thanks es 73....Rich WA2RQY (1961)

About the TMC VFO - I've got one of these, serial no 1000. Similar to the article FA, but somewht different (later?) - mechanical digital freq display, different panel layout. Does anyone have specs and/or circuit? Mine works, I've rebuilt the heaters, but could use some info on heater control wiring. It's huge and heavy thing, but (I guess) it has its uses.

first page of article in CQ Des. 57 to you as email with attached gif
file,

seems to me that it is very little difference between the SP-200 and
-SP400 series, can somebody tell me whether it is only minor
differences?

Source record: 71660

Have drawn a sketch showing some details of front view to distinguish between the different receivers (it was drawn using photograph). It is available as 10kb gif file, the smaller text is not readable, but perhaps not too important. Fronts are physical equally sized, and almost identically looking, the difference is that LwEa misses AGC-switch and separate RF gain control.

By the way, I am aware that it is several different versions of
Lo40K39 transmitter, but haven't seen any variations in the receiver,
what is the difference between Lo6K39 and Lo6K39a?

It is also a different Torn.E.b for export marked, some of these were
exported to Sweden during war (m/2), have complete manual with
frequency tables - in Swedish language. Torn.Eb was made by different
factories and the mechanical parts were slightly different so you
can't neccessarily take parts from one receiver to repair another

I'm looking for a manual for an ARC Type 210 RT11-A VHF aircraft
transceiver. Anybody
have one that I could make a copy of?

The transceiver consists of an ARC RT-11A, 118-136Mhz, 360Chan, a DV-15A
power supply and C-67A Dzus
mounted control head.

I'm trying to get it wired and operating just as a display of early ARC
commercial air equipment

Thanks.

2214. WTB: Crystal marker (100 KC) for SX-111

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-05 00:00:00 UTC
From: David Oliver <oliver002@home.com>
Message-ID: <MnXm4.1059$Qx5.26131@news.rdc1.tx.home.com>
Source record: 71667

I'm trying to get my late father-in-law's Hallicrafters SX-111 up an running and the 100 KC crystal marker is cracked. Hallicrafters part # 019-202351. Also has T-9E on the side of the tube.

Would the tube sellers have these? Although it is not a tube it sure looks like one and fits into a tube base.

What are some suppliers who would be likely to carry them?

Would I be risking burning up anything if I powered up the rig to see what shape the rest is in?

Thanks in advance for any advice and comments you may have,

Dave

One difference I've seen is that the 200 required an electrodynamic
speaker (the field coil was used a a filter choke in the B+ supply) and
the SP-400 did not.

Both are great radios.

These units were used with the BC-610 and T-368 AM/CW transmitters of the 40's and 50s' manufactured by Barker & Williamson both are original and complete. They would be usable in present condition (would need to shine-up the roller inductor contacts as they have been stored for many years) or the internal parts would make a nice antenna tuner. They contain the following parts:

1 Rf Amp meter: 10/15A (the 2 units have different meters)
3 Roller inductors: 96uH, 15uH, 1.6uH
3 Vacuum Capacitors: 22pF 20kv, 55pF 32kv
1 Porcelain Antenna Switch, 3 position / 2 section
3 - 3 Digit Turns Counters

I have 2 original tech manuals for the tuners (included in the BC-610 and T368 manual). The units weigh 50lb ea. so shipping by ups ground would be about $40.

Asking $75 each obo plus shipping from 92653. Dan WA6PXO

REALLY ? Care to name these 15.00 sources? That sounds like the deal of the century... NOS in the original box, 15 bucks, 6MJ6 sweep tubes, huh? ;o)

Cheapest price I see besides Gary's asking price of 40.00 (actually 33.33 if all 3 A) is 47.00 each, from Electron tube Enterprises in Vermont , @ 47.00 EACH.

Please enlighten us to your 15.00 sources of frugal tube-buying prowess.

JOE

Do you have 6D6 nos tubes?

Is there a direct substitute?

What is their value? I am looking for a friend.

Thanks! 73, DavidC K1YP

These would be great for repairing BAs, building receivers, VFOs etc.

I have very few left. If anyone wants them...

Reduction drives:
Jackson Brothers vernier reduction drives 6.5:1 for standard 1/4
shafts.
This is the standard small brass planetary drive used on a lot of
gear!
Mounts with two screws. Made in England by Jackson Bros.
Sell for $9.00 each
Two for $17.00
Four for $30.00 (Four or more are $7.50 each)
Shipping additional

alt.ham-radio.marketplace,rec.radio.swap,rec.radio.amateur.boatanchors,rec.audio.tubes,rec.antiques.radio+phono

For Sale:

TWO METERS!
0 - 10 mA DC Triplett with 3" square face. Looks new. Will sell for
$7.00

1 - 0 - 1 mA Triplett with 3.5" round face. Excellent. Will sell for
$5.00

120V transformer with secondaries: 640V CT at 125 mA,
6.3V CT at 4A, and 5V at 3A
Dimensions: 4.0" X 3.5" X 4.25" tall.
Will sell for $16.00 plus shipping

Lafayette Tube Tester, model TE-55. Nice little compact tester in
vinyl covered
case. Very good condition. No documentation. Will sell for $45.00

Exciting novelty item: HAND-CRANKED MAGNETO GENERATOR!
Produces 120V AC. These will provide about 20-30 Watts depending
on your cranking speed! The size is about 3" diameter and 3" deep with
a retracting handle. You can mount these behind a sturdy front panel
with a single hole and the large nut provided.
Several still available! Will sell for $25.00 each plus shipping

LOAD RESISTORS for testing audio amplifiers:
I can supply you with 200 Watt loads - either 4 ohm, 8 ohm, or 16
ohm resistive loads as follows:

Each set-up would consist of FOUR 50 Watt resistors wired for
the correct load impedance. These are brand new DALE Gold
Series (the best resistors you can get!) and each set-up rated for
200 Watts cost $27.00 plus shipping.

I can also supply these as 100 watt loads in either 8 ohms or 16 ohms,
for $18.00 each, plus shipping

Manuals:
Hallicrafters HT-46 Transmitter Manual (repro) QTY 1 ... $15.00
E.F. Johnson Viking 6N2 Transmitter Manual (") QTY 1 ... $12.00
Heath Seneca VHF-1 Transmitter Manual (repro) QTY 1 ... $15.00
Heath DX-60 Transmitter Manual w/notes (Repro) QTY 1 ... $18.00
Heath QF-1 Q Multiplier Manual w/schematic (Repro) QTY 1 ... $12.00
Radio Shack DX-160 SW Receiver Manual (repro) QTY 1 ... $10.00
shipping additiona;

Nice 115V AC power supply in a 19" standard rack cabinet (black).
Two Power transformers by Colorado Transformer Co.
Includes fan, 4 switched isolated AC outlets, etc.
Lighted AC on/off switch, Cooling fan, fuse, AC cord etc.
This is a top quality well-regulated supply.

+ 15V DC at 4 Amps (or possibly more)
- 15V DC at 4 Amps (or possibly more)
+ 5V DC at 3 Amps (or possibly more)
- 5V DC at 3 Amps (or possibly more)

Also has excellent Western Magnetics 400 Watt isolation
transformer feeding a row of 5 AC isolated outlets on top.
Additional outputs for 20V AC etc.
Excellent condition. Very clean inside, looks like new.
Will sell for just $50.00 plus shipping

Panasonic 8-track tape player, with cables. Model RS-802-US in
Excellent condition.
No visible head wear. This deck looks almost like brand new.
No scratches. Beautiful. Will sell for $49.00 plus shipping

2250. FS: Radiola V, headphones, and tubes in NC

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-06 00:00:00 UTC
From: Brian Harrison <bharrison@apple.com>
Message-ID: <B4C25103.5C36%bharrison@apple.com>
Source record: 71553

Hello All...

I have the following for sale or trade:

Radiola V - very good (unrestored) condition, has the wooden base with label, and the top wooden "lid" (the top lid is missing one piece of wooden molding across the front/back). All knobs and the woodgrain are fine, inside decals and front metal tags on each of the two units are excellent. The crystal detector is a cat's whisker type (may be a replica?).

The transformers appear to ohm out good, the detector/amplifier unit comes with three 01As with good filaments. One of these is a brass base tube with short pins, no tip.

Headphones:

Trimm Radio Co, Inc. Chicago USA - heavy all black earpieces, similar to but smaller than Baldwins - good cloth band, cord, and tips

Brandes Superior - good cloth band, cord, and tips

Dixie Cannonball - good cord and tips, cloth band tattered

Pennsylvania, Hamburg and Hamburg, Pittsburg PA - good cord (no tips), good cloth band

Tower Scientific Navy Type, good band, cord mended, no tips

Trimm Radio Mfg. Co, Chicago USA - good cord and plug, tattered cloth band

Holtzer Cabot, Boston - cloth band OK, cord poor, one bakelite earpiece broken

Little-SpitFire - good cloth band, cord, and tips

RADIOMARINE, good cloth band, no cord

Utah Chicago (WWII era?) ANB-H-1, rubber earpieces OK, good leather band, 15" cord, and plug.

The Chief, CF Cannon Co, Springwater, NY - good cord, plug, and (rubber-coated) band

Alnico Magnetic 15, CF Cannon Co, Springwater, NY, split wire band, cord OK but not tips

Trimm Radio Mfg. Co, Chicago USA - good cord and plug, tattered band

Trimm Type L - good cord, plug, and (rubber-coated) band

Trimm Professional - good cord, no tips, (rubber-coated) band

Acme, Trimm Inc - good cord, plug, and (rubber-coated) band

Tubes:

Five misc O1A tubes (not in boxes), all filaments test OK.

I also have several large boxes of tubes (mostly unboxed but many sorted) from the 30s' 40s and beyond from an estate. I would like to sell these tubes in one transaction...

thanks, and regards,

brian

2255. Industrial tube numbering scheme?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-06 00:00:00 UTC
From: Bob Weiss <bweiss@carroll.com>
Message-ID: <389D08BC.C0CD4B08@carroll.com>
Source record: 71558
Cross-posted to: rec.audio.tubes,rec.radio.amateur.boatanchors

Does anyone have any information on the "1 by 2" numbering system used on some older transmitting and industrial tubes? Types like 2C39, 2D21, 4E27, 3E29, 1P25, 2K26, 3B28, etc. Was there any rhyme and reason to the assignment of these numbers, or are they more or less a random designator like the 4 digit type numbers? I have found a lot of info on the web about the RETMA and european receiving tube systems, but nothing on the industrial tube types.

Thanks in advance!

Bob Weiss N2IXK

2262. Re: Industrial tube numbering scheme?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-06 00:00:00 UTC
From: adouglas@gis.net
Message-ID: <389d649d.5330910@news.newsguy.com>
Source record: 71565
Cross-posted to: rec.audio.tubes,rec.radio.amateur.boatanchors

Hi,

>Does anyone have any information on the "1 by 2" numbering system used
>on some older transmitting and industrial tubes? Types like 2C39, 2D21,

It's in Lud Sibley's "Tube Lore": the first number indicates heater
power, the second is the device type, and the following numbers were
assigned in order, beginning with 21. Incidentally this is where the
"1N" diode and (later) the "2N" transistor numbers came from too.

73, Alan

Source record: 71572
Cross-posted to: rec.audio.tubes,rec.radio.amateur.boatanchors

Run, DO NOT WALK, to the AES website and order "Tube Lore". This is the BEST tube reference book on the planet. It doesn't have detailed specs and curves but is invaluable for figuring out what that wierd tube you found does. To expand on the lettering scheme:

FIRST NUMBER: Heater power

1: 0V (no heater) 6: 100-200W
2: up to 10W 7: 200-500W
3:10-20W 8: 500-1000W
4: 20-50W 9:>1000W
5: 50-100W

SECOND LETTER: Type of device

A: Single element (ballasts)
B: Diode or 2-element device
C: Triode
D: Tetrode
e: Pentode
F: Hexode
G: Heptode
H: Octode
J: Magnetically controlled (ie magnetrons)
k: Electrostatically controlled (ie klystrons)
L: Vacuum capacitors
P: Photoemissive (ie photomultipliers)
Q: Cavities
R: Ignitrons
S: Vacuum Switches
T: Storage and radial beam tubes

Second Number: Serial, starting with 21.

Hope this helps. 73 John

2278. FS: (2) NCX-3s

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-06 00:00:00 UTC
From: n3ab@fast.net
Message-ID: <38a3a513.81085370@news.fast.net>
Source record: 71581

I have 2 National NCX-3s laying here doing nothing. The first one was working, but hasn't been turned on for maybe 10 years. The front panel is good, but the cabinet was repainted in black. The dial slips. Overall condition is good, maybe a 7.5 or 8 out of 10.

The other is a parts unit, although it looks complete. The cabinet is dirty, but should clean up OK. It is in the original color. The dial works OK on this one. I never powered it up, as I picked this up at a yard sale.

I don't have a power supply or manual for these. Hopefully, someone who has spent time with these can put them to good use. I would like to get $100.00 for the pair, plus shipping from Pennsylvania. Please e-mail me if interested or you have questions. Thanks for reading.

Steve

The SP-200 has external power supply, so I wouldn't see the point in
this, hi. I think it is mainly some cosmetic differences. The circuit
diagram on K4XL's site is also very old style, while a more modern
circuit is shown in Surplus conversion manual and also my manual for
BC-779. Perhaps BC-779 is already improved over the older SP-200/210?

Watch your mail boxes. I am almost ready to mail the
brochures for the 2000 Spring Meet in the Carolinas.
They should be in the mail tomorrow.
If you attended the conference last year or your are a member
of the CC-AWA or your are a member of the AWA living in
NC, SC, VA, AL, TN, GA, you will receive a brochure.

If you don't get one by being one of the above, send me your
mailing address and I will mail one to you.

Brochures will also be available a the Elkin NC hamfest and
the Charlotte hamfest.

73,

Ron

FOR SALE, BEST OFFER:
World Radio Laboratories Globe Scout 65 CW/AM transmitter. I do not know the age of this transmitter though I would guess it was build in the fifties.

The Good News:
It does generate about 50 Watts of power on the 80 Meter band. I only checked it on 80 Meters as I only have a 3706 kHz crystal so I have no idea what will happen if you try to use it on any other band(s). Keying the transmitter in CW mode gave a nice CW note as listened to on a receiver. The AM modulator works but read on..
Lots of pictures at http://www.flash.net/~p15218/GlobeScout.htm

The Bad News:
1) Appearance: the front panel has a few scratches and the meter has a dent in it's bezel though the glass is intact.
2) The cabinet is in dire need of a paint job and has surface rust though sanding removes the rust.
3) The transmitter was probably dropped in the vertical direction at one time as the chassis under the power transformer is distorted.
4) There is a hole drilled in the center of the rear chassis apron.
5) With AM modulation enabled, the meter arcs over internally on modulation peaks, no arcing in CW mode.
6) The meter appears to be held in the front panel with RTV.
7) I don't have any books or other documentation with the transmitter.
8) I have NO interest in shipping this thing....it ain't worth my time in fact I've wasted enough time just taking the pictures and typing this! So, who ever offers the most money by 15 February 2400 UTC can pick it up in the Detroit Michigan area.
Thanks
Bob

The 6C6 probably wouldn't work as well, it is a sharp-cutoff tube as opposed to the 6D6 which is remote cutoff. The 6D6 is plentiful and available everywhere; its only direct substitute is the 58AS, which is much harder to find; or, if you want to make an adapter, the octal 6U7-G.

Oh yea, I used to go there in the 70's too. Oddly enough the guy who ran it was named Sanford. Not related to Fred I don't believe. He used to let us dig through the stuff that came in and buy it for 50 cents a pound. I think it still exists but it isn't what you remembered. Last time I was there, probably 7 years ago, it was North of town just off I-380.

2311. Re: 6MJ6 new in box

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-07 00:00:00 UTC
From: Gary - KJ6Q <davison7@gte.net>
Message-ID: <7GDn4.191$st4.10724@dfiatx1-snr1.gtei.net>
Source record: 71496

LOOK, my point is, and has been, that there IS a substantial growing practice among many in amateur radio to take advantage of others by artificially inflating prices of items being offered for sale.

I have expressed that opinion based purely upon my own personal feelings, and also based upon comparisons as to what similar merchandise CAN be often found for from a variety of other sources.

You are correct that I have never done business with you personally - tho' I have examined your pricing recently when trying to locate a set of 6JB6's for a set of Drake twins - and your prices were comparable with several other similar vendors - I have no way of knowing how your "quality" compares.

When I expressed the "You are one of" statement, I was lumping you and your operation in with other similar enterprises - perhaps unfairly, since I can't begin to specifically offer first-hand experience with any, other than the one I finally bought tubes from. I still feel the general pricing structure for tubes (and MANY other older items) being currently offered by businesses such as yours are unreasonably high - but certainly it IS your privilege to sell at those prices, just as it is the right of your potential customers to either buy - or not - as they choose.

My intent in my posts was not to "defame", or otherwise abuse you personally, or your business, but to loudly object to a condition *I* personally find disturbing - if that action on my part has caused you, personally, unusual discomfort, I apologize - but my viewpoint on the subject remains unchanged.

My comments and viewpoint was intended to be directed at a *condition*, and at an "industry" as a GROUP, rather than as any attempt to single out an individual or single operating business.

If this meets your need for "satisfaction", fine - if not, guess we'll just have to do the "lawyer" bit...

I intend to offer no further comments on the subject, it's been pretty well covered!

Regards...

Yaesu FT-301 all solid state. Transmitter
works excellent and got one good audio
report. only made one contact. when receiving
sideband it is almost impossible to clearly
tune the sideband signal. I believe the
problem to be in the balance demodulator
circuit. One dial light out. panel quality is
8 to 9.. case a 7 scratches on top of cabinet
and one of the push in fasteners is missing.
comes with Microphone, Power cord
and Origional Manual WITH schematic.

asking $225. plus shipping.

even HW-100/101/SB-100/101 has a 6AU6 (sharp cutoff pentode) as
RF amplifier, so why shouldn't 6C6 work in this receiver?

It would be nice if the item being auctioned off would be
identified in these group notices. It would save time and
trouble if one is not interested in the specific make/model.

Hi,
Is this price so expensive because labor rate is so high ??? I don't know how many hams can afford such a price. It is more expensive than a clean working radio. Just curious.

We have for sale 1 Central Electronics 200V transmitter. It is in
EXCELLENT condition. 9.5 out of 10 at least, if not 10 out of 10.
100% Electrically & physically. It could easily polished up and be made
BETTER than new. Pictures can be created and sent via e-mail for
serious offers. Price is $800 OBO. U-Ship (I'm a UPS shipper so
Shipping will be real cost, not inflated "Mail Boxes Etc" price)

Thank you for viewing this post,

Source record: 71620

For Sale - Pole Pig Transformer, removed from case many years ago. Works great. I have no idea how much power it is capable of doing but I do know it loafs at 2500 watts output. It is 7000 Volts with a center tap. Also has a lower voltage tap (I think it was 6500 but dont remember 100%). I had it hooked up as a full wave supply with the center tap at ground and it put out 4400Volts running 2500 watts output. I just bought this a few months ago and have used it on the air but I swapped it out for a much smaller Peter Dahl unit. I have a pic of this@ http://members.aol.com/jimmoci/polepig2.jpg
This is $125 pick up only- it weighs over 100lbs!
I am near Northeast Philadelphia.
Thanks,
Jim

Source record: 71624

You are probably correct that the common "rip-off". "opportunist" type individuals and small NOS retailers are selling their stuff at holdup prices - but within the last month I have seen 6MJ6's selling on Ebay for well under $20 apiece - and of course swapmeet prices can frequently provide similar - or less- pricing.

We are currently seeing a phenomena within amateur radio that was prevalent in gold rush times - the notion that if someone else wants or needs YOU happen to have, gouge them until the blood runs... Yet those doing so will be the FIRST to weep and moan at artificially increasing gas prices, where the major oil companies are playing the same game!

I think it's *despicable* that these "muggings" now take place so commonly in our hobby - and that so many are willing to merely shrug their shoulders and accept it...

Someone here wanna' pay extortion prices for tubes, here's your golden opportunity - but *I* somehow doubt they will move very fast, or at ALL, at those prices...

I'm not surprised at your post - YOU are one of the opportinist-ripoff
artists I was referring to in my other post in this thread... Anyone
is entitled to reasonable profit on their goods at the retail level -
but what many of you guys are doing is neither moral OR reasonable!

Won't slow you down a BIT will it!

Just remember that morality when you buy your next gallon of gas, or
some OTHER extortion priced merchandise YOU want or need - and hide
those tears in shame, what goes around comes around...

What you are doing MAY be legal - but it sure as hell ain't RIGHT!

All I asked you was where are your sources.

You are setting yourself pretty deep. I have served the amateur radio
community here since April 1998 with NO COMPLAINTS that I have heard of.

You referred to ME, Joe Pratt, Tubecntral@aol.com, as a rip-off artist.

I will give you 24 HOURS to prove your point, or retract your statement or you
may be hearing from my lawyer, 'KJ6Q.

Do you know what libel is ?
.

Sincerely,
Joe Pratt
Tubecntral@aol.com

li*bel [1] (noun)

[Middle English, written declaration, from Middle French, from Latin libellus, diminutive of liber book]

First appeared 14th Century

1 a : a written statement in which a plaintiff in certain courts sets forth the cause of action or the relief sought

b archaic : a handbill esp. attacking or defaming someone

2 a : a written or oral defamatory statement or representation that conveys an unjustly unfavorable impression

b (1) : a statement or representation published without just cause and tending to expose another to public contempt

(2) : defamation of a person by written or representational means

(3) : the publication of blasphemous, treasonable, seditious, or obscene writings or pictures

(4) : the act, tort, or crime of publishing such a libel

24 HOURS, prove I am 'a rip off artist, opportunist', or the letter is in the mail.

Regards,
Joe Pratt, Tubecntral@aol.com

Anyone have information on reprogramming a Maxon cm-4020-a UHF radio? It's a four channel beast, and I've been unable to find anything on it on the internet. I've got a hunch it's crystal based. Ideas? If you would, cc: mreed@ccems.com as I don't check these groups often enough.

Mike :)

Hi Fellow AM'rs
Am refinishing Johnson panels, bezels, crystal knobs & cabinets in latest automotive finishes (same as used on new cars out of Detroit). Panel & bezel is done in basecoat / clearcoat & is supurb!
Check my web site for pics of Rangers

Valiant 1 Complete set refurbished to better than original. $285.

Ranger 1 Complete set refurbished to better than original. $250.

Ranger 2 Panel set only (everything up front) $190.
Note: I can do ur cab in matching panel color but not in
wrinkle
finish. Add $60 to above

All the above + shipping. I take Visa / MC / AM-XP

Soon: HAMMARLUND HQ-180 refinish. I am presently working out the wrinkles on doing the Hammlund HQ-180 / HQ-170 series radios. Prices will be in same range as the Johnsons above.

See you on AM (from my shop days 7290kc & 29meg)

Source record: 71639

Yaesu FT-301 all solid state. Transmitter
works excellent and got one good audio
report. only made one contact. when receiving
sideband it is almost impossible to clearly
tune the sideband signal. I believe the
problem to be in the balance demodulator
circuit. One dial light out. panel quality is
8 to 9.. case a 7 scratches on top of cabinet
and one of the push in fasteners is missing.
comes with Microphone, Power cord
and Origional Manual WITH schematic.

asking $225. plus shipping.

Bob rhawk@megabits.net

2364. FS (4) -2Meter radios AS-IS KW & KDK

Cleaning out the shack! I have 2- Kenwood 2M rigs. 1 -7600 and 1 -7625 2M synthesized mobiles with one mike and 2-DC cables. One works, but no squelch. The other is dead.
Also 2- KDK mobiles, one works but has intermittent TX. The other is dead. No cables or mikes with these rigs. I believe they are 2016's, or 2015's. One Owner's manual for the KDK.
Need a winter's project? All for $100 shipped, except western USA,add $10 additional for shipping. I'm in FL. All go at once.
All AS-IS, I haven't attempted a fix, these are hamfest specials . 73,
K4GJ
